

**WEEKLY PROGRESS UPDATE
FOR OCTOBER 3-OCTOBER 9, 1997**

**EPA REGION I ADMINISTRATIVE ORDER SDWA I-97-1019
MASSACHUSETTS MILITARY RESERVATION
TRAINING RANGE AND IMPACT AREA**

The following summary of progress is for the period from October 3 to October 9, 1997.

1. SUMMARY OF ACTIONS TAKEN

UXO Survey

No UXO surveys were performed this week.

Drilling

Ogden, D.L. Maher (the drilling contractor), and Valeri Construction (Maher's road building subcontractor) continued work on the site. TRC (EPA's oversight contractor) was present on site to observe drilling and groundwater sampling activities. As of October 9 the sonic rig was drilling MW-16 at a depth of 355 feet below ground surface (bgs), and the Barber rig was drilling at MW-2 at a depth of 112 feet bgs. Table 2 presents a summary of wells completed to date.

Sampling and Analysis

Soil and groundwater samples have been analyzed or submitted for borings that have been drilled to date. Also, hand auger samples have been collected from 0-6 inches at future drilling locations in the Impact Area, and at the areas of potential concern identified in the Field Sampling Plans. The types of samples being analyzed, dates of submittal, and preliminary results are summarized in Table 1. All results in Table 1 are unvalidated. Concentrations of specific compounds will be presented in tabular form after the results for all samples in a sample data group are available and have been validated.

Explosive Compounds --

Explosive compounds have been detected in soil samples collected from 0-6 inches at MW-1, MW-2, MW-3, MW-4, MW-5, MW-6, MW-7, MW-8, MW-9, MW-12, MW-15, MW-19, MW-25, MW-26, MW-27, MW-28, and MW-29, using the screening methods. Explosives were also detected using the screening method at 10 feet bgs in MW-1; at 20 feet bgs in MW-8; at 70, 80, 90, and 100 feet bgs in MW-25; and at 10 and 20 feet bgs in MW-27. No explosives have been detected from the confirmatory Method 8330 analysis of 0-6 inch samples from MW-1, MW-2, MW-3, MW-4, MW-5, MW-6, MW-7, MW-9, MW-12, MW-15, MW-26, MW-27, MW-28, and

MW-29, and of the 10 foot interval from MW-1. The results from the 8330 analysis of 0-6 inch samples from MW-8, MW-19, and MW-25 confirm that explosive compounds are present in surface soil at these locations. No explosive compounds have been detected in deeper soil samples analyzed to date by screening or confirmatory 8330 methods.

Explosive compounds have been detected using the screening method in composite surface soil samples from 0-6 inches in 8 grids from Area 1; 12 grids from Area 2; 11 grids from Area 3; 4 grids from Area 9; 5 grids from Area 10; and 5 grids from Area 14. Method 8330 confirmatory analysis of these hits is complete for all samples from Area 1, 5 samples from Area 2, all samples from Area 3, no samples from Area 9, 4 samples from Area 10, and no samples from Area 14, with no detected explosive compounds in any of these samples. Method 8330 results from the remaining grids that had screening hits are not yet available.

RDX was reported at an estimated concentration below the detection limit by the screening method in a groundwater profiling sample collected from 160 feet bgs in MW-17. When this sample was analyzed using Method 8330 no explosive compounds were detected. Explosive compounds were detected using Method 8330 in a groundwater profiling sample collected from 44 feet bgs in MW-18. RDX was reported at an estimated concentration below the detection limit by the screening method in a groundwater profiling sample collected from 176 feet bgs in MW-18. When this sample was analyzed using Method 8330 no explosive compounds were detected. RDX was detected in groundwater profiling samples from 120, 130, 162, 202, 222, 232, and 252 feet bgs in MW-1 by screening methods. Explosive compounds were detected using Method 8330 in groundwater profiling samples collected at 120, 130, 140, 150, 162, 182, 202, 212, 222, 232, 252, 262, 272, and 282 feet bgs in MW-1. In MW-15, explosive compounds were detected in groundwater samples from 110, 120, 130, 140, 150, 160, 280, and 300 feet bgs using Method 8330. In MW-21, explosive compounds were detected in groundwater samples from 176, 186, 196, and 270 feet bgs using Method 8330.

Inorganic Compounds --

Inorganic compounds have been detected in all soil samples analyzed to date. There are a large number of detected compounds and many of these are expected to be naturally occurring. The identification of compounds exceeding background concentrations will be reported after determination of background levels.

Other Analytes --

A number of "other" analytes have been detected in soil and groundwater samples as indicated in Table 1, including VOC, SVOC, pesticides, and herbicides. Some of these compounds may have background concentrations; i.e., they may result from anthropogenic or natural sources

which are not related to activities at the Impact Area and Training Ranges. Some of these compounds have been detected in laboratory blanks, which suggests that they may not be present in all of the samples indicated. Many of these compounds have been reported at estimated concentrations due to quality control issues. The quantity of data for these analytes does not allow a detailed description of the occurrence of each analyte for this progress update report. Ogden is currently importing these data into a database to allow some summary information on the concentrations of each compound to be developed, to be presented in a future progress update report.

Water Level Measurements

Water level recording devices that were installed in LRWS-2, CS-19 (MW-7E), and CS-10 (AEHA- 11) continue to record water levels. A synoptic round of water level measurements was collected on October 3. The results are summarized in Table 3.

Plans and Reports

NGB is preparing Field Sampling Plans for the remaining areas identified in the Action Plan.

2. SUMMARY OF DATA RECEIVED

Laboratory results for soil and groundwater samples were received during the week and are summarized in Section 1 above. Concentrations for specific compounds will be presented in tabular form after the results for all samples in a sample data group are available and have been validated. The types of samples being analyzed, dates of submittal, and preliminary results are summarized in Table 1. All results in Table 1 are unvalidated.

3. DELIVERABLES SUBMITTED

Deliverables submitted during the reporting period included the following:

Weekly Progress Update (September 26 - October 2)	October 3, 1997
Final Field Sampling Plan for Area 4	October 6, 1997

4. SCHEDULED ACTIONS

The Barber drill rig is expected to complete the pilot hole at MW-2 and start the pilot hole on MW-13. The Sonic rig is expected to finish drilling at MW-16, then start drilling at MW-2. Groundwater sampling will continue at monitoring wells located at MW-21, MW-22, MW-25, 95-6, 95-15, and LRWS-8.

Table 1 Summary of Preliminary Analytical Results (not validated) As of October 9, 1997
