

**WEEKLY PROGRESS UPDATE
FOR SEPTEMBER 6-SEPTEMBER 10, 1999**

**EPA REGION I ADMINISTRATIVE ORDER SDWA I-97-1019
MASSACHUSETTS MILITARY RESERVATION
TRAINING RANGE AND IMPACT AREA**

The following summary of progress is for the period for September 6 to September 10, 1999.

1. SUMMARY OF ACTIONS TAKEN

Drilling progress as of September 10 is summarized in Table 1.

Table 1. Drilling progress as of September 10, 1999

Boring Number	Purpose of Boring/Well	Total Depth (ft bgs)	Saturated Depth (ft bwt)	Completed Well Screens (ft bgs)
MW-64	Gun and Mortar well (GP-6)	245	153	87-97 100-105 129-139
MW-82b	Bourne far field well (2 nd boring)	135	105	54-64 104-114 125-135
MW-66	Gun and Mortar well (GP-16)	275	146	
MW-84b	Bourne far field well (2 nd boring)	125	86	
MW-68	Gun and Mortar well (MP-1)	245	157	

bgs = below ground surface
bwt = below water table

Samples collected during the reporting period are summarized in Table 2. Groundwater sampling continued for round 3 of the Phase I monitoring wells. Groundwater profile samples were collected from MW-64, MW-66, and MW-68; locations and drilling status for these wells are indicated in Table 1.

The Guard, EPA, and MADEP had a meeting on September 9 to discuss technical issues, including the following:

- Selection of screen depths for MW-84. The remaining profile data were faxed on 9/8. EPA, DEP, and the Guard agreed to set the remaining two screens at 100' to 110' bwt and 150' to 160' bwt. EPA requested that the Bourne far field well cross section be updated.
- Selection of screen depths for MW-64 (GP-6). The profile data were not available for the meeting but at a meeting/conference at 3:00, the EPA, DEP, and the Guard agreed to set three screens instead of the two screens in the workplan. It was agreed to set the screens at -5' to 5' bwt, 8' to 13' bwt, and 37' to 47' bwt.
- The status of the far field well proposal for the J well and the Sandwich wells was discussed. EPA requested that the USGS re-run the vertical ZOCs for each of the five Sandwich supply wells east of MMR individually to determine which of the ZOC is deepest and extends furthest on to the base. EPA also requested that the pumping rates used in the model are correct. EPA indicated that they may ask for a second far field well cluster south of the "SFF-1" proposed location, in the off-Post

area. There was a discussion of the 102nd FW letter of August 18 on the J Well. EPA asked why the southern locations for the J Well far field wells are not being considered. The Guard stated that access issues and travel times have made these locations undesirable and that the northern location proposed will be sufficient to monitor training area activities. The EPA stated that IRP monitoring well 102 is not satisfactory because it does not meet the criteria of a far field well. EPA indicated that they may ask for a location in the off-Post area somewhat north of the southern MMR boundary. There was a discussion of the objectives for the far field well at the J Well, which differs from other wells in that it has a treatment system in place.

- The status of the field work was discussed. Ogden indicated that one sonic rig was finishing MW-84 and that two barber rigs and one sonic rig are continuing on gun and mortar wells. After these are completed the next scheduled drilling is the additional far field wells and the Demo 1 wells. EPA asked if the sub-regional model was going to be used before we start the Demo 1 wells. Ogden indicated that the USGS was currently working on the sub-regional model. Groundwater sampling has been completed for round 2 of the new wells, and is starting for round 3 of the old wells.
- Responses to comments on the Guard's NON response letter were discussed. The Guard indicated it will answer EPA's verbal questions of 9/2 by 9/13, except for the lab capacity issue which will be answered by about 9/15. There was discussion of schedule status and changes since the Guard's letter of 8/24. The following items from that letter were discussed:

Alleged Violations

10. Assessment of Site Features - EPA requested that the remaining locations off Pew Road be discussed at next weeks technical meeting.
16. Prepare final FSP - Date is OK assuming two weeks for EPA review time.

Future Deadlines

1. and 2. Sample IRP Wells Round 2 and 3 - Guard believes that only one round was required but they would sample a select group of wells for additional rounds. EPA stated that they assumed all wells were getting three rounds of sampling and would need more information before they could make a decision.
3. Sample Phase I Well Round 3 - Guard stated that this work has started but is unlikely to be completed by the 9/29 date. EPA did not agree to the 10/29 date and requested that the Guard re-evaluate and propose a new date.
4. Sample/analyze G1 FF Wells Round 3 - Guard and EPA agreed to revise the proposed completion date for round 3 because round 2 was completed prior to the scheduled date. Three months will be proposed between rounds.
- 5., 6., and 7. Sample/analyze G2 FF Wells Round 1, 2, and 3 - EPA requested clarification on what wells were in Priority Group 2. Ogden indicated that MW-63, and MW-80 through MW-83 are the G2 FF Wells referenced in the schedule. EPA and Guard agreed with the date of Round 1 but changed round 2 to 1/15/00 and round 3 to 4/15/00.
- 11., 12., and 13. Guard indicated that UXO issues are continuing to delay these tasks. EPA asked why one task must be completed before the next can start. Ogden indicated that the UXO must be disposed of before any work can begin. The road building must be completed prior to any of the drilling because the detonation of the UXO will produce craters in the road. Down hole UXO

clearance must be completed prior to well drilling. Down hole clearance and soil sampling will occur at the same time. Soil sampling and well drilling can not be performed at the same time due to the limited space on the drilling pad. Guard has submitted a letter dated 9/9/99 with proposed extension.

15. Begin training area investigations - There was a discussion of whether the proposed date is realistic and what would constitute "beginning" the investigation. The Guard will reevaluate this date in light of scoping and mobilization requirements.

18. Soil sampling/analysis at gun and mortar positions - Guard believes that an extension is required in order not to overload the laboratory. Ogden is currently working on preparing justification for this request, and will combine info on capacity provided by lab with schedule for known analyses.

19. and 20. Install and sample/analyze Gun and Mortar Position Wells - Work has started on drilling these wells. EPA asked the Guard to review these tasks and revise the completion date.

21. and 22. Begin trenches and mortar target investigations - Same issue as 15 above... EPA requested the Guard revise this date because they don't believe scoping is the "beginning" of the investigation.

- Action Items from IART Meeting of 7/19/99 were discussed.

Ogden indicated that the investigation update for Raccoon Lane is not in the slide show. EPA requested that Ogden go over the results even if it is not in the slide show. The Guard needs to get the survey coordinates and elevations of the J-3 wetland drive points from IRP, in order to complete particle tracks for the J-3 Wetland Report (TM 99-4).

Ogden indicated that the request to change the progress reports to contain only validated data need to be discussed with IART personnel.

Ogden indicated that the request to have IRP detections included was not done. Need clarification on the request was for all data or just explosives. This change will be completed for next month.

EPA convened a meeting of the Impact Area Review Team on September 9, 1999. The next IART meeting is scheduled for October 28, 1999.

2. SUMMARY OF DATA RECEIVED

Preliminary non-validated detections of explosive and volatile organic compounds (VOCs) are summarized in Table 3 for samples collected during the preceding four-week period. The status of the explosive detections with respect to confirmation using Photo Diode Array (PDA) spectra is also indicated in this table. Where the PDA status is "YES" in Table 3, the detected compound has been confirmed to be present in the sample. Where the status is "NO", the identification of an explosive has been confirmed to be a false positive. Where the status is blank, PDA has not yet been used to evaluate the detection, or PDA is not applicable because the analyte is a VOC.

Some of the detections in Table 3 were discussed in last week's progress report. The range of sample dates included in Table 3 overlaps from week-to-week due to the method of reporting and extracting these data. New detections in Table 3 that were not discussed in last week's report include:

- Field quality control samples from MW-64 and MW-66 profile samples had nitroglycerin detected in one interval, but neither detection was confirmed using the PDA spectra.

- The groundwater sample from MW-1S and MW-59S had RDX and HMX detected and confirmed with the PDA spectra. These detections were also observed during the previous round of sampling.
- The groundwater samples from MW-1M2, MW-2M2, and MW-43M2 had a detection of RDX that were confirmed with PDA spectra. These detections were also observed during the previous round of sampling.
- The groundwater sample from MW-45S had detections of 3-nitrotoluene, 4-nitrotoluene, nitroglycerin, PETN, and picric acid. None of these explosive detections were confirmed with the PDA spectra.
- Profile results from MW-62 (U Range well) had detections of 2-nitrotoluene, 3-nitrotoluene, PETN, and nitroglycerin in one interval. Picric acid was detected in 2 intervals. None of the explosives detected were confirmed by PDA spectra.
- Profile results from MW-64 had a chloroform detection in one interval.
- Profile results from MW-66 had detections of acetone (14 intervals), chloroform (12 intervals), MEK (10 intervals), picric acid (15 intervals), nitroglycerin (13 intervals), 3-nitrotoluene (13 intervals), 4-nitrotoluene (7 intervals), 2,6-dinitrotoluene (4 intervals), PETN (4 intervals), 2-amino-4,6-dinitrotoluene (1 interval), 4-amino-2,6-dinitrotoluene (1 interval), and nitrobenzene (1 interval). Only the 2,6-dinitrotoluene detections were confirmed with the PDA spectra.
- Profile results from MW-68 had detections of acetone (17 intervals), MEK (16 intervals), chloroform (8 intervals), 2-hexanone (2 intervals), chloroethane (1 interval), picric acid (15 intervals), PETN (15 intervals), 4-nitrotoluene (9 intervals), 3-nitrotoluene (8 intervals), 2-nitrotoluene (5 intervals), nitroglycerin (4 intervals), and 2,4-dinitrotoluene (1 interval). None of the explosives detected were confirmed with the PDA spectra.

3. DELIVERABLES SUBMITTED

Weekly Progress Report (8/23 – 8/27)	9/10/99
Monthly Progress Report No. 29 (August 1999)	9/10/99

4. SCHEDULED ACTIONS

Scheduled actions for the week of September 13 include completion of drilling at MW-84b (Bourne far field well), MW-68 (MP-1), and MW-66 (GP-16 well); commence drilling of MW-65 (GP-14 well) and MW-69 (MP-3); development of newly installed wells; groundwater sampling of Snake Pond drive points DP-2S and DP-2D; and continued ground water sampling of round 3 of the Phase I monitoring wells.
