

**MONTHLY PROGRESS REPORT #87
FOR JUNE 2004**

EPA REGION I ADMINISTRATIVE ORDERS SDWA 1-97-1019 and 1-2000-0014

**MASSACHUSETTS MILITARY RESERVATION
TRAINING RANGE AND IMPACT AREA**

The following summary of progress is for the period from June 1 to June 30, 2004. Scheduled actions are for the six-week period ending August 13, 2004.

1. SUMMARY OF REMEDIATION ACTIONS

The following is a description of remediation actions taken as part of or in preparation for Rapid Response Action (RRA) Plans for various Areas of Concern at Camp Edwards through June 30, 2004. An RRA is an interim action that may be conducted prior to risk assessments or remedial investigations to address a known, ongoing threat of groundwater and/or soil contamination.

Demo Area 1 Groundwater RRA

The Demo Area 1 Groundwater RRA consists of the removal and treatment of contaminated groundwater to control further migration of explosives and perchlorate. Extraction, treatment, and recharge (ETR) systems at Frank Perkins and Pew Road has been designed and includes a single extraction well, an ex-situ treatment process to remove explosives and perchlorate from the groundwater, and injection wells to return treated water to the aquifer.

Development of extraction and injection wells for the Groundwater RRA is complete. Installation of subsurface piping and well vaults for the RRA ETR Systems is substantially complete. The Pew Road electrical system was completed. Site preparation and foundation work for the treatment containers is nearly complete at Frank Perkins Road and Pew Road. The groundwater treatment containers are currently under construction at an off-site facility.

Demo Area 1 Soil RRA

The Demo Area 1 Soil RRA consists of the removal of all geophysical anomalies within the perimeter road (7.4 acres) and the removal and thermal treatment of contaminated soil from in and around the Demo 1 kettle hole. The total amount of soil to be removed and treated is approximately 15,000 cubic yards to a maximum depth of 8 feet.

As part of the Soil RRA, excavation of contaminated soil within the Demo 1 depression continues. Excavation of the 3 to 4 foot lift within the kettle hole was started on June 9, 2004 and has been completed. Screening of excavated soil continues and is being transported to the thermal treatment feed area at the H Range. The current inventory of untreated soils is expected to require about six weeks to process. Anomaly removal within the Demo 1 depression continues.

Demo Area 2 Soil RRA

The Demo Area 2 Soil RRA consists of the removal and treatment or disposal of contaminated soil that is a potential source of groundwater contamination. Soil will be removed from a man-

made berm and a 30 foot area at the center of the Demo 2 site with the total soil removal approximated at 825 tons. Soil will be treated in the Thermal Desorption Unit.

UXO and vegetation clearance near the soil piles continues in preparation of soil excavation and other RRA activities.

J-2 Range Soil RRA

The J-2 Range Soil RRA consists of the removal and treatment of soil in five areas within the J-2 Range with the highest concentration of contaminants. Soil will be removed from the Twin Berms Area, Berm 2, Fixed Firing Point 4 (FFP-4), Disposal Area 1, and Disposal Area 2, with total removal approximated at 19,039 square feet and 1,186 cubic yards to a maximum depth of 2.5 feet. Soil will be treated in the Thermal Desorption Unit.

UXO and anomaly removal continues in preparation of soil excavation and other RRA activities. J-2 Range polygon residue sorting was completed. UXO clearance has been completed in the following areas: Fixed Firing Points 3 and 4, the Twin Berms, the Range Road Burn Area, Disposal Area 1, Berm 2, and Berm 5. UXO clearance continues for Disposal Area 2. Investigation of the burn pit discovered in Disposal Area 2 has been completed.

J-3 Range Soil RRA

The J-3 Range Soil RRA consists of the removal and treatment of contaminated soil from three areas within the J-3 Range Demolition Area. Soil will be removed from the Detonation Pit, the Burn Box, and the area north of Target 2, with total soil removal approximated at 4,615 square feet and 461 cubic yards of soil to a maximum depth of 3 feet. Soil will be treated in the Thermal Desorption Unit.

Concrete removal was completed for the Minuteman 1 Test Area (MMT1) Blocks and Target Walls in preparation of soil excavation and other RRA activities. Blow-in-place detonations and demolition activities are expected to be complete by July 9, 2004. Soil sampling was conducted at the footprint of the MMT1 Blocks.

2. SUMMARY OF ACTIONS TAKEN

Drilling progress for the month of June is summarized in Table 1.

Table 1. Drilling progress as of June 2004				
Boring Number	Purpose of Boring/Well	Total Depth (ft bgs)	Depth to Water Table (ft bgs)	Completed Well Screens (ft bgs)
MW-296	J-2 Range (J2P-30)	210	91	215-225; 255-265
MW-331	J-2 Range (J2P-40)	344	114	195-205; 235-245
MW-332	Northwest Corner (NWP-17)	275	121	119-129
MW-333	Northwest Corner (NWP-19)	246	77	
MW-334	J-2 Range (J2P-27)	326	110	165-175; 285-295
MW-335	J-2 Range (J2P-26)	347	110	120-130; 215-225; 255-265
MW-336	J-2 Range (J2P-25)	321	110	
MW-337	J-2 Range (J2P-39)	322	127	
MW-338	Northwest Corner (NWP-19b)	223	74	72-82; 119-129; 189-199
MW-339	J-2 Range (J2P-19)	328	108	
MW-340	J-2 Range (J2P-42)	110		

bgs = below ground surface
bwt = below water table

Completed well installation at MW-296 (J2P-30), MW-331 (J2P-40), MW-332 (NWP-17), MW-334 (J2P-27), MW-335 (J2P-26), and MW-338 (NWP-19b); completed drilling at MW-336 (J2P-25), MW-337 (J2P-39), and MW-339 (J2P-19); commenced drilling at MW-340 (J2P-42); and completed backfilling of MW-333 (NWP-19). Well development continued for recently installed wells.

Samples collected during the reporting period are summarized in Table 2. Groundwater profile samples were collected from MW-333, MW-335, MW-336, MW-337, MW-338, and MW-339. Groundwater samples were collected from Bourne water supply and monitoring wells, recently installed wells, residential wells, Northwest Corner monthly monitoring wells, and as part of the April round and July quarterly round of the Draft 2004 Long Term Groundwater Monitoring Plan. Investigation-derived waste (IDW) samples were collected from the Granular Activated Carbon (GAC) treatment system. Soil samples were collected from the soil cutting piles at MW-316, MW-317, MW-320, MW-323, MW-328, MW-332, and MW-333. Surface water samples were collected near a public beach, a private beach, and near the spit at Snake Pond. Pore water samples were collected from lysimeters installed at Targets 23 and 42 in the Impact Area. Soil samples were collected from the Demolition Area and Melt/Pour Area in the J-3 Range, HUTA I Test Plot 6, and Target 23 in the Impact Area. Pre- and post- detonation samples were collected from the J-1, J-2, and J-3 Ranges.

The following are the notes from the June 10, 2004 Technical Team meeting of the Impact Area Groundwater Study Program office at Camp Edwards:

Punchlist Items

- #1 Provide update on ACE obtaining access agreement for new monitoring well on Schooner Pass Condo Assoc property (MADEP). Monetary offer to the Condo Assoc needs their review and quorum to vote on acceptance. No update was available on this item.
- #2 Provide email to EPA/DEP with list of existing wells for possible sampling in the area East of the J-2 GW plume (IAGWSP). Ms. Richardson reported that IAGWSP investigated eight residences with reported wells, but only one residence actually had a well. This well was sampled. Jane Dolan (EPA) requested that the residential wells in the area of Peters Pond be placed on a monthly sampling schedule, similar to what was done in the Northwest Corner investigation. In reply to a question, Ms. Richardson indicated that the third result for the Peters Pond well with detections was 0.82 ppb, and this will be sent to EPA.

Fieldwork Update

Frank Fedele (ACE) provided an update on the IAGWSP fieldwork.

- Jane Dolan (EPA) inquired about the delay at J2P-39 due to UXO; this issue was discussed in detail later in the meeting (see "ROA Status and Drilling Schedule"). Ms. Dolan also asked what training activities were to occur next week, and what investigation activities would they affect. Bill Gallagher (IAGWSP) mentioned that the training at small arms ranges would mainly affect the Impact Area, including RRA preparations, HUTA lysimeter investigations, and groundwater sampling. IAGWSP will provide a schedule of training activities and the affected areas.
- As part of AMEC's investigation, UXO clearance started at D1P-24. Well pad construction and drilling were completed at MW-333 (NWP-19), and screen installation is expected next week. Screen installation was completed at MW-332 (NWP-17) and well development is underway. Groundwater sampling at Western Boundary, LTM, residential, and new wells continues, and the third round of this years surface water sampling was completed at Snake Pond on 6/2/04.
- Central Impact Area: The third round of lysimeter sampling for Targets 23 & 42 was completed. Lysimeter installation and soil sampling at the HUTA is still underway. Desiree Moyer (EPA) inquired if results are available for earlier lysimeter samples. Mr. Gallagher indicated that preliminary results for perchlorate showed interferences, and samples were being reanalyzed using the LC/MS method. UXO clearance (by ECC) continues at Target 42 in preparation for the RRA. Todd Borci (EPA) asked that regular updates be provided to document progress on the Targets RRA, similar to the documentation provided for Demo 1.
- Demo 1 Groundwater ETR: Construction work continued on electrical conduit, injection wells, and treatment system foundations for the Frank Perkins Road ETR. Construction of the electrical supply for the Pew Road ITE Study and ETR continued. Meghan Cassidy (EPA) inquired when the Pew Road ITE study was expected to end. Paul Nixon (IAGWSP) replied that the study would have to be terminated in July, even though break through may not be achieved, because of preparations for the Pew Road ETR.
- SE Ranges. As part of ECC's investigation, well pad construction was completed at MW-335 (J2P-26) and drilling is underway at this location. UXO clearance continues at J2P-39 and J2P-25. Screen installation was completed at MW-334 (J2P-27) and MW-296 (J2P-30), and installation continues at MW-331 (J2P-40). Well development was completed for MW-326 (J1P-24), and well development continues for MW-313 (J2P-34). Sampling of new wells continues.

- In support of the J-3 Range Soil RRA, concrete removal and demolition activities continued for the MMT1 Blocks and Target Walls. Mr. Fedele provided pictures of the activities underway. Mr. Borci indicated that sampling beneath the blocks would be needed; he will discuss sampling with Dave Margolis (ACE) and Dave Hill (IAGWSP).
- As part of the J-2 Range Soil RRA, UXO clearance continues for Disposal Area 2. Mr. Fedele provided a figure illustrating UXO clearance progress for the J-2 Range RRA. UXO clearance is complete for FFP3 and 4; the Twin Berms, the Range Road Burn Area, Disposal Area 1, Berm 2, and Berm 5. Investigation of the burial pit discovered on 5/21/04 at grid N31 in Disposal Area 2 was completed. UXO clearance and improvements to roads in support of field activities continued.
- Mr. Fedele reported that eight UXO were BIP on 6/3/04, mainly at the SE Ranges and at Impact Area Target 42.

Demo 1 Work Update

Frank Fedele (ACE) provided an update on the Demo 1 Soil RRA fieldwork.

- Several burn pit removals are complete, including C6 burn pit 2 to a depth of 6 feet, B6 to a depth of 4 feet, and C6. OE items located in each pit were provided to the agencies. Mr. Fedele provided a figure illustrating UXO clearance progress for the Demo 1 RRA. Excavation of the 3-4 foot lift within the kettle hole was started 6/9/04 and is about two-thirds complete. Todd Borci (EPA) requested that IAGWSP respond to his email question of 6/9/04 regarding additional sampling requirements for perchlorate.

ROA Status and Drilling Schedule

Darrin Smith (ACE) distributed and reviewed the ROA status table and drilling schedule table.

- Changes in ROA status since the last meeting include the following ROA approvals: D1P-24, J1P-25, J2P-19, J2P-25, Greenway Road Swath, and J3P-46 (although still working out this location with agencies). Mr. Smith noted that an approval for J1P-23 is expected after the upcoming meeting with NHESP. ROAs were submitted to SHPO/NHESP for J3P-43, J3P-44, Demo 2 additional RRA locations, NWP-18 (the revised location will be provided to SHPO tomorrow), and the soil investigations at GP-12, -14, -19, and L-3 Range. Meghan Cassidy (EPA) noted that the J-2 Gibbs Road Swath should be approved next week considering the submittal date.
- Mr. Smith distributed the drilling schedule and indicated ECC finished well installation at J2P-30 on 6/8/04, and was now working on installation at J2P-40. The next drilling location for this rig would be J2P-25 or J2P-39. The latter may be delayed due to UXO requiring BIP at the drill pad. Todd Borci (EPA) requested that the BIP be conducted by early next week to allow an earlier start on J2P-39. ECC has completed drilling at J2P-26 and expected to move this rig to start on J2P-25 next week. AMEC has finished drilling at NWP-19 and is expected to set screens the week of June 14 and then move to D1P-24.

Miscellaneous Topics

- Meghan Cassidy (EPA) inquired about progress with obtaining drilling access from Forestdale School. Dave Margolis (ACE) indicated that approval of the Corps' Real Estate Directive is expected within a few days. Pam Richardson (IAGWSP) mentioned that several messages have been left for the principal, but no return calls have been received yet.
- Desiree Moyer (EPA) requested that IAGWSP update the spreadsheet summary of investigation-derived wastes that was provided about a year ago.
- Jane Dolan (EPA) indicated that the agency agrees with the NH landfill selected for offsite disposal, based on the information provided by Frank Fedele (ACE).

IART Meeting for June 2004

The EPA convened a meeting of the Impact Area Groundwater Review Team on June 22, 2004. The agenda included a general investigations update and a discussion of the J-3 Range Groundwater Rapid Response Action, and the Demolition Area 1 Feasibility Study.

The following are the notes from the June 24, 2004 Technical Team meeting of the Impact Area Groundwater Study Program office at Camp Edwards:

Punchlist Items

- #1 Provide update on ACE obtaining access agreement for new monitoring well on Schooner Pass Condo Assoc property (MADEP). Monetary offer to the Condo Assoc needs their review and quorum to vote on acceptance. Gina Kaso (ACE) explained that the ACE attorney contacted the Condo Assoc attorney to explain the access requirements and the monetary offer. The Condo Assoc attorney indicated they would contact their client to explain the offer. Ms. Kaso suggested that MADEP continue their attempts to discuss this issue with the Condo Assoc (see Northwest Corner Update below).
 - #3 Provide status of providing Agencies an updated IDM summary table (ACE). Jay Ehret (ACE) indicated that the IDM summary would be provided to the Agencies next week.
- Jane Dolan (EPA) inquired about the status of the training schedule; Ms. Kaso indicated Ralph Turner (ACE) is preparing the training schedule summary, and will provide an email update on its status.

Fieldwork Update

Frank Fedele (ACE) provided an update on the IAGWSP fieldwork.

- As part of AMEC's investigation, UXO clearance and well pad construction and drilling were completed at NWP-19b and D1P-24. Well pad restoration was conducted at MW-209. Drilling was completed at MW-338 (NWP-19b) and screen setting is expected shortly. Groundwater sampling at Western Boundary, LTM, and new wells continues, and synoptic water table measurements are underway. UXO clearance for RRA excavations continues at Demo Area 2.
- Central Impact Area: UXO clearance (by ECC) continues at Target 42 in preparation for the RRA. A figure was handed out showing the UXO clearance progress and item locations. Mr. Fedele expects that the target will be lifted and relocated to a holding area on Wednesday 6/30. Desiree Moyer (EPA) requested a schedule for installation of the HUTA lysimeters; Bill Gallagher (IAGWSP) will provide. Mr. Gallagher indicated that IAGWSP would like to collect a soil sample, beyond those described in the approved plan, at the ground surface above a lysimeter that has preliminary detections of PEP compounds; Ms. Moyer indicated this would be acceptable.
- Demo 1 Groundwater ETR: Construction work continued on the electrical service cabinet and grounding rods for the Frank Perkins Road ETR. Grounding system testing was conducted for the Pew Road ETR. The Pew Road ITE study continued.
- SE Ranges. As part of ECC's investigation, UXO clearance was completed at J1P-25, and clearance continues at J2P-42 (Gibbs Rd "A" location). UXO clearance and well pad construction were completed at MW-336 (J2P-25), MW-337 (J2P-39), and MW-339 (J2P-19). Drilling starts today at MW-339, drilling continues at MW-337, and drilling was completed at MW-335 (J2P-26) and MW-336. Screen installation was completed at MW-331 (J2P-40). Well development continues for MW-331 (J2P-40), and development was completed for MW-313 (J2P-34) and MW-334 (J2P-27). Sampling of new wells continues.
- In support of the J-3 Range Soil RRA, Textron completed removal of the MMT1 Blocks, and continues demolition and removal of the Target Walls and other debris. Demolition is

expected to be complete by 7/9/04. Eight soil samples were collected from the footprint of the MMT1 Blocks, and data will be provided to EPA when available. Additional delineation soil sampling will be completed today at the J-3 Demolition Area and the Former Melt Pour Facility Area.

- As part of the J-2 Range Soil RRA, UXO clearance continues for Disposal Area 2. Mr. Fedele provided a figure illustrating UXO clearance progress for the J-2 Range RRA. After clearance of Disposal Area 2, the areas west of polygon 1 and north of polygon 2 will be cleared. UXO clearance and improvements to roads in support of field activities continued. Jane Dolan (EPA) requested a list of items sent for disposal in the CDC; Mr. Fedele will provide.

Demo 1 Work Update

Frank Fedele (ACE) provided an update on the Demo 1 Soil RRA fieldwork.

- Two figures were provided, one showing UXO clearance progress, and the other showing excavation progress. The total number of items in storage for CDC disposal is now 5496. ACE expects to request the CDC be mobilized to MMR in the August-September timeframe. Jane Dolan (EPA) requested an updated tracking sheet for soil thermal treatment documentation. Paul Nixon (IAGWSP) indicated this update will be provided Monday 6/28/04. The current inventory of untreated soils is expected to require about six weeks to process, not including expected additions from the HUTA or the Demo 2 RRA. Dave Margolis (ACE) indicated that the HUTA SMP would be submitted for review within a few days, and the J-3 Range RRA SMP shortly after that.

ROA Status and Drilling Schedule

Darrin Smith (ACE) distributed and reviewed the ROA status table.

- ROA approvals were received for the Gibbs Road Swath and for the Demo 2 additional RRA locations. The ROA was submitted to SHPO/NHESP for the CIA RRA at Targets 23 & 42. Bill Gallagher (IAGWSP) noted that the ROA submitted for the Northwest Corner soil sampling locations at the gun positions and L-3 Range does not include the additional locations that remain to be identified by EPA. Therefore, this ROA may have to be modified before the additional locations can be sampled.
- Mr. Smith distributed the drilling schedule and indicated ECC finished drilling at J2P-25 earlier in the week, and was starting on J2P-19. Another drill rig continues drilling for ECC at J2P-39. AMEC has finished drilling at NWP-19b and is expected to set screens the week of June 28, then move to set screens at NWP-19. Jane Dolan (EPA) requested that the Gibbs Road "E" location be added to the drilling schedule.

Northwest Corner Update

Bill Gallagher (IAGWSP) provided an update on the Northwest Corner investigations, including a figure of sampling locations.

- Drilling status is as discussed by Darrin Smith; finishing up at NWP-19b and then moving to NWP-19. The resident from which access was requested to allow a camera survey has agreed, but the access agreement may require a few more weeks. Access agreements for the Foretop Road water supply hookups should be provided to the residents by early next week; preparations to start the hookups by the end of the week are continuing.
- The USGS proposal on CFC age dating has been approved by EPA with the addition of MW-323. IAGWSP is discussing with USGS whether the two supply wells requested by EPA can be sampled using USGS' specialized equipment. Len Pinaud (MADEP) indicated the DEP also approves the USGS sampling. RSNW03 was sampled on Wednesday.
- AEC/CHPPM has commented that the CAL-PUFF model suggested by EPA for modeling the fireworks air emissions may be more appropriate for modeling over long distances,

though they are still considering the suggestion to use it. The recent Project Note has been signed and will be distributed today. Mr. Pinaud indicated that he would continue trying to discuss the ACE monetary offer for drilling access with the Schooner Pass Condo Assoc.

Document Schedules

Ed Wise (ACE) handed out the summary of scheduling issues and asked for input.

DOCUMENTS HAVING COMMENTS:

- The NW Corner Data Summary Report RCL is complete.
- The Demo 2 Soil RRA Plan MOR is awaiting input from DEP before this can be finalized.
- Desiree Moyer (EPA) asked whether MOR approval is still needed for the August Supplement to the 2003 LTGM Plan.
- Paul Nixon (IAGWSP) provided an informal RCL for EPA and DEP comments on the Demo 1 Soil Treatment Plan.

COMMENT RESOLUTION MEETINGS:

- Dave Margolis (ACE) indicated that ACE would still like to schedule the HERA Workplan meeting, even though the UXO safety issue remains to be resolved. The Agencies indicated their risk assessment personnel would not be available until the 3rd week in July. It was agreed that ACE could send a preliminary draft workplan to start the review, rather than wait a month for the meeting. Len Pinaud (MADEP) indicated that the CERCLA approach to ecological risk assessment might not be acceptable to DEP.
- The CRM for the J-3 Range Soil RRA Plan is complete.
- The Demo 1 Groundwater FS meeting is scheduled for Wednesday 6/30 at 1 pm.
- Ms. Moyer requested that the CIA Groundwater FS presentation be provided to the Agencies soon.

DOCUMENTS NEEDING COMMENTS:

- Mr. Margolis indicated that Soil RRAs and SMPs are generally the highest priority, in ACE's view, for obtaining and resolving comments, so that the thermal treatment process can operate efficiently.
- Mr. Pinaud indicated that DEP comments on the J-3 Range Groundwater RRA Plan are expected in 1-2 weeks.
- Mr. Nixon indicated that item #1, DEP comments on the Demo 1 POP Test Report, can be removed, as no further comments are expected except from DEP air permitting staff.
- Mr. Nixon indicated that item #5 (Demo 1 GW FS) comments are expected on 7/20/04.

DOCUMENTS TO BE SUBMITTED:

- Bill Gallagher (IAGWSP) indicated that the IAGWSP plans to issue the Western Boundary Report in September with a groundwater risk assessment, but that the risk assessment for soil would be part of reporting on the gun and mortar position investigations. Mr. Pinaud indicated that a groundwater risk assessment prepared prior to agreement on the HERA Workplan would be done at risk, and that an alternative would be to issue the report without the risk assessment.
- Jane Dolan (EPA) asked when the Agencies would receive a workplan for additional grids on the J-2 Range; Mr. Margolis indicated this would be submitted Monday 6/28/04. Ms. Dolan asked when a similar workplan would be provided for the J-1 Range.
- Ms. Moyer asked if the CIA COC process is sufficiently resolved to proceed with the FS. Mr. Gallagher indicated that IAGWSP would prefer to wait for resolution on the HERA Workplan; Ms. Moyer indicated that was OK.
- Ms. Moyer asked if an RRA Workplan would be provided for the gun and mortar firing positions. Mr. Nixon indicated that IAGWSP plans to provide one or more Soil Management Plans, in about one month, with the goal of beginning fieldwork in the September-October timeframe. The contaminant to be addressed at the firing positions is 2,4-DNT.

J-2 Range Groundwater Investigation

Mike Goydas (Jacobs) summarized the latest investigation results and proposed wells.

- Well locations were depicted on a handout. Synoptic water level measurements were provided on an earlier map with groundwater flow vectors, particle tracks, and proposed monitoring wells. Generally, groundwater flow directions were similar to previous indications, except with more northerly flow. In the area east of the J-2 Range, proposed wells 1-4 would be installed first, and wells 5a, 5b, and 6 would depend on results for the first four wells. Drilling continues west of Barlow Road for plume delineation, as well as near Gibbs Road.
- Jane Dolan (EPA) provided EPA comments on the proposed well locations east of J-2. EPA approves the locations of #s 1, 2, 4, 5a, 5b, and 6. EPA suggests moving well #3 south to a location east of the first home on Greenville Road. EPA proposes three additional wells; #7 west of MW-334 where the USCG access road meets Greenway Road; #8 east of MW-334, and #9 downgradient of MW-321. Mr. Goydas asked about the rationale for these three locations.
- Ms. Dolan indicated that these locations were selected downgradient of existing detections, to evaluate migration of known contaminants. Mr. Goydas asked if EPA could email additional information regarding these proposed locations; Ms. Dolan declined. EPA also requested a contingency well based on the results of J2P-19.

Miscellaneous Topics

- Desiree Moyer (EPA) requested that the waste management information she had requested should be provided in the typical format used by IAGWSP for corrective actions.

3. SUMMARY OF DATA RECEIVED

Validated data were received during June for Sample Delivery Groups (SDGs): CE0264, CE0279, CE0280, CE0286, CE0287, CE0288, CE0289, CE0290, CE0291, CE0292, CE0293, CE0294, CE0295, CE0296, CE0303, CE0313, CEE939, CEE941, CEE942, CEE943, CEE946, CEE947, CEE948, CEE949, CEE950, CEE951, CEE952, CEE953, CEE954, CEE955, CEE956, CEE959, CEE960, CEE961, CEE962, CEE964, CEE965, CEE966, CEE967, CEE969, CEE971, CEE973, CEE975, CEE979, CEE980, CEE982, CEI957, DCE024, DCE025, GCE143, GCE146, GCE147, GCE149, GCE150, GCE152, GCE156, GCE157, GCE160, GCE161, GCE162, GCE163, GCE165, GMR074, GMR075, MMR1050 and MMR1051.

These SDGs contain results for 387 groundwater samples from supply wells, monitoring wells, and residential wells; 20 samples from ITE groundwater studies; 17 process water samples; 79 profile samples from monitoring wells MW-314, MW-316, MW-317, MW-320, MW-323, MW-328, and MW-332; 32 crater grab samples from the J-1 and J-3 Ranges and Demo Area 1; 56 crater grid samples from the BIPs in the U Range, J-2 Range, and Impact Area; 25 soil grid samples from Targets 23 and 42 in the Impact Area and north of Gibbs Road; 18 soil grab samples from the J-3 Range Barrage Rocket Site and the soil piles at Demo Area 2; 16 soil moisture samples from Targets 23 and 42 in the Impact Area; and 3 surface water samples from Snake Pond.

Validated Data

Table 3 summarizes the detections that exceeded an EPA Maximum Contaminant Level (MCL) or Health Advisory (HA) for drinking water, or exceeded a 4 ppb concentration for perchlorate, sorted by analytical method and analyte, since 1997. Table 3 is updated on a monthly basis, discussions in the text are updated on the same schedule as Figures 1 through 8, which are discussed later in this section.

Table 4 summarizes first time validated detections below the MCL/HA for drinking water or below a 4 ppb concentration for perchlorate received from May 29, 2004 through June 25, 2004. VOCs and SVOCs are included for the three month period beginning March 29, 2004 and ending June 25, 2005. This is to include detections of VOCs and SVOCs that were not reported in the April and May Monthly Reports. Metals, chloroform, and BEHP are excluded from Table 4 for the following reasons: metals are a natural component of groundwater, particularly at levels below MCLs or HAs; detections of chloroform are pervasive throughout Cape Cod and are not likely the result of military training activities; and BEHP is believed to be largely an artifact of the investigation methods and introduced to the samples during collection or analysis.

Figures 1 through 8 depict the cumulative results of groundwater analyses for the period from the start of the Impact Area Groundwater Study (July 1997) to the present. Each figure depicts results for a different analyte class:

- Figure 1 shows the results of explosive analyses by EPA Method 8330. This figure is updated and included each month.
- Figure 2 shows the results of inorganic analyses (collectively referred to as "metals", though some analytes are not true metals) by methods E200.8, 300.0, 350.2M, 353M, 365.2, CYAN, IM40MB, and IM40HG. This figure is updated and included quarterly in the March, June, September, and December Monthly Progress Reports.
- Figure 3 shows the results of Volatile Organic Compound (VOC) analyses by methods OC21V, 504, and 8021W, exclusive of chloroform detections. This figure is updated and included quarterly in the March, June, September, and December Monthly Progress Reports.
- Figure 4 shows the chloroform results using the Volatile Organic Compound (VOC) analyses by method OC21V. This figure is updated and included semi-annually in the June and December Monthly Progress Reports.
- Figure 5 shows the results of Semi-Volatile Organic Compound (SVOC) analyses by methods OC21B and SW8270, exclusive of detections of bis (2-ethylhexyl) phthalate (BEHP). This figure is updated and included quarterly in the March, June, September, and December Monthly Progress Reports.
- Figure 6 shows the BEHP results using the Semi-Volatile Organic Compound (SVOC) analyses by methods OC21B and SW8270. This figure is updated and included semi-annually in the June and December Monthly Progress Reports.
- Figure 7 shows the results of Pesticide (method OL21P) and Herbicide (method 8151) analyses. This figure is updated and included quarterly in the March, June, September, and December Monthly Progress Reports.
- Figure 8 shows the results of Perchlorate analysis by method E314.0. This figure is updated and included each month.

The concentrations from these analyses are depicted in Figures 1 through 7 compared to Maximum Contaminant Levels (MCLs) or Health Advisories (HAs) published by EPA for drinking water. For Figures 1 through 7, a red circle is used to depict a well where the concentration of one or more analytes was greater than or equal to the lowest MCL or HA for the analyte(s). A yellow circle is used to depict a well where the concentration of all analytes was less than the lowest MCL or HA. A green circle is used to depict a well where the given analytes were not detected in groundwater samples. For Figure 8, a red circle is used to depict a well where the concentration of perchlorate was greater than or equal to 4 ppb. An orange circle is used to depict a well where the concentration of perchlorate is above 1 ppb and below 4 ppb. A yellow circle is used to depict a well where the concentration of perchlorate was less than 1 ppb. A

green circle is used to depict a well where perchlorate was not detected in groundwater samples. For all figures, an open circle is used to depict a proposed well where the analytes in question for example, Explosives in Figure 1, have not yet been quantified. A black circle represents a well that has been sampled for analytes, but validated groundwater data is not yet available.

There are multiple labels listed for some wells in Figures 1 through 8, which indicate multiple well screens at different depths throughout the aquifer. The aquifer is approximately 200 to 300 feet thick in the study area. Well screens are positioned throughout this thickness based on various factors, including the results of groundwater profile samples, the geology, and projected locations of contaminants estimated by groundwater modeling. The screen labels are colored to indicate which of the depths had the chemical detected above MCLs/HAs/4 ppb concentration for perchlorate. Generally, groundwater entering the top of the aquifer will move deeper into the aquifer as it moves radially outward from the top of the water table mound. Light blue dashed lines in Figures 1 through 8 depict water table contours. Groundwater generally moves perpendicular to these contours, starting at the center of the 70 foot contour (the top of the mound) and moving radially outward. The rate of vertical groundwater flow deeper into the aquifer slows as groundwater moves away from the mound.

The results presented in Figures 1 through 8 are cumulative, which provides a historical perspective on the data rather than a depiction of current conditions. Any detection at a well that equals or exceeds the MCL/HA/4 ppb concentration for perchlorate results in the well having a red symbol, regardless of later detections at lower concentrations, or later non-detects. The difference between historical and current conditions varies according to the type of analytes. There are little or no differences between historical and current exceedances of drinking water criteria for Explosives, Perchlorate, VOCs, Pesticides, and Herbicides; the minor differences are mentioned in the following paragraphs. There are significant differences between historical and current exceedances of drinking water criteria for Metals and SVOCs, as described further below.

Figure 1: Explosives in Groundwater Compared to MCLs/HAs

For data validated in June 2004, one well, MW-323M2 (Northwest Corner), had a first time validated detection of hexahydro-1,3,5-trinitro-1,3,5-triazine (RDX) above the HA of 2 ppb. Seven wells, MW-162M2 (Demo Area 1), MW-209M2 (Impact Area), MW-307M3, MW-310M1 (J-2 Range), MW-323M1 (Northwest Corner), and MW-311M1 and M2 (Demo Area 2) had first time validated detections of RDX below the HA of 2 ppb.

Exceedance of drinking water criteria for explosive compounds are indicated in six general areas:

- Demo Area 1 (wells 19, 31, 34, 73, 76, 77, 114, and 129);
- Demo Area 2 (wells 16, 160, and 262);
- The Impact Area and CS-19 (wells 58MW0001, 58MW0002, 58MW0009E, 58MW0011D, 58MW0016B, 58MW0016C, 58MW0018B; and wells 1, 2, 23, 25, 37, 38, 40, 85, 86, 87, 88, 89, 90, 91, 93, 95, 98, 99, 100, 101, 105, 107, 111, 112, 113, 176, 178, 184, 201, 203, 204, 206, 207, 209, 223, 235, OW-1, OW-2, and OW-6);
- J Ranges and southeast of the J Ranges (wells 45, 58, 132, 147, 153, 163, 164, 165, 166, 171, 191, 196, 198, 215, 218, 227, 265, 289, 303, 306, and wells 90MW0022, 90MW0041, 90MW0054 and 90WT0013).
- Landfill Area 1 (wells 27MW0018A, 27MW0020A, and 27MW0020B); and

- Northwest Corner of Base Boundary (well 323)

Exceedances of drinking water criteria were measured for 2,4,6-trinitrotoluene (TNT) at Demo Area 1 (wells 19S, 31S, 31M, and 31D) and Southeast of the Ranges (196S), for 1,3-dinitrobenzene and nitroglycerin at Demo Area 1 (well 19S), and 1,3-dinitrobenzene at LF-1 (wells 27MW0018A, 27MW0020A, and 27MW0020B). Exceedances of the HA for hexahydro-1,3,5-trinitro-1,3,5-triazine (RDX) were noted at all of the locations listed above except at MW-45, MW-196, and the LF-1 wells. Exceedances of drinking water criteria were measured for 2,6-dinitrotoluene (2,6-DNT) at MW-45S.

A magenta concentration contour line is used in Figure 1 and Inset A to show the extent of RDX exceeding the HA in these areas. This extent is based on samples from monitoring wells and samples collected during the drilling process ("profile" samples). This extent also considers non-validated data, where the results have been confirmed using Photo Diode Array (PDA). Additional information regarding PDA is provided below under the heading "Rush (Non-Validated) Data". Concentration contours will be prepared for other areas, and refined for the above areas, when sufficient data are available.

Demo Area 1 has a single well-defined source area and extent of contamination. The estimated extent of RDX exceeding the HA at Demo Area 1 based on the most recent groundwater measurements is indicated by a magenta concentration contour line on Figure 1 and Inset A.

Demo Area 2 has three groundwater exceedances of the RDX HA at MW-16S, MW-160S, and MW-262M1. The extent of the contamination is currently under investigation.

The Impact Area has a plume defined by RDX concentrations above the HA of 2 ppb. The plume originates primarily along Turpentine Road and extends downgradient to the east, northeast. Another source of RDX in the Impact Area is CS-19. Portions of CS-19 are currently under investigation by the Air Force Center for Environmental Excellence (AFCEE) under the Superfund program. The extent of RDX has largely been defined in the Impact Area and the investigation phase of the project is nearing completion.

The J Ranges and downgradient areas have three groundwater plumes defined by concentrations of RDX above the HA of 2 ppb. The three plumes originate at the J-1 Range Interberm Area (northern plume in the vicinity of MW-58 and MW-265), the J-3 Range Demolition Area (southern plume extending from MW-163 south to Snake Pond) and the L Range (in an area defined by MW-147 and MW-153 at Greenway Road). The J Ranges are currently under investigation and the plumes will be updated and refined as new data is received.

The Northwest Corner of the base boundary has one validated detection of RDX in groundwater above the HA of 2 ppb at MW-323M2. The M1 screen in this location has a validated detection of RDX in groundwater below 2 ppb.

Figure 2: Metals in Groundwater Compared to MCLs/Has

For validated data between March and June 2004, no wells had first time validated detections of metals above the MCL/HAs. One well, RANGECON (Western Boundary) had a first time validated detection of nickel below the MCL of 100 ppb.

Exceedances of drinking water criteria for metals are scattered throughout the study area. Where two or more rounds of sampling data are available, the exceedances generally have not been replicated in consecutive sampling rounds. The exceedances have been measured for antimony, arsenic, cadmium, chromium, lead, molybdenum, sodium, thallium and zinc. Arsenic (well 7M1), cadmium (52M3), and chromium (7M1) each had one exceedance in a single sampling round in August-September 1999. One of four lead exceedances (ASP well) was repeated in another sampling round and the remaining three lead exceedances (wells 2S, 7M1, and 45S) have not been repeated in previous or subsequent results. Two of the eight molybdenum exceedances were repeated in consecutive sampling rounds (wells 53M1 and 54S). All of the molybdenum exceedances were observed in year 1998 and 1999 results. Six of the 18 sodium exceedances were repeated in consecutive sampling rounds (wells 2S, 46S, 57M2, 57M1, 145S, and SDW261160). Four wells (57M3, 144S, 145S, and 187D) had sodium exceedances in year 2002 results. Zinc exceeded the HA in seven wells, all of which are constructed of galvanized (zinc-coated) steel.

There have been few exceedances of drinking water limits for antimony and thallium since the introduction of the ICP/GFAA and ICP/MS methods, discussed in the next paragraph. None of the 12 antimony exceedances were repeated in consecutive sampling rounds, and only one exceedance (well 187D) was measured in year 2002 results. Eight of the 74 thallium exceedances were repeated in consecutive sampling rounds (wells 7M1, 7M2, 47M2, 52S, 52D, 54S, 54M1, and 94M2). Only three wells (148S, 191M1 and 198M2) have had thallium exceedances in the year 2002. There have been no detections of thallium in 2003 or thus far in 2004.

Groundwater samples sent for metals analysis are analyzed for most metals by Inductively Coupled Plasma (ICP) in accordance with U.S. EPA Contract Laboratory Program Statement of Work ILM04.0. All of the 13 detections of antimony and 88 detections of thallium that exceeded the MCL/HA were analyzed using this method. In May of 2001, the IAGWSP began analyzing for antimony and thallium using the GFAA (graphite furnace atomic absorption) method in accordance with EPA Drinking Water Methods 204.2 (antimony) and 279.2 (thallium) in order to achieve lower detection limits for these metals. Both the ILM04.0 and GFAA methods are subject to false positive results at trace levels due to interferences. As a result, the IAGWSP changed to a new method to achieve lower detection limits for antimony and thallium in January of 2003. Groundwater samples are now analyzed for antimony and thallium by Inductively Coupled Plasma/Mass Spectroscopy (ICP/MS) in accordance with the EPA Method 6020. The ICP/MS Method 6020 has greater sensitivity and the added feature of selectivity for antimony and thallium. These additional methods achieve lower detection limits for these two metals and reduce the number of false positive results.

The distribution and lack of repeatability of the metals exceedances is not consistent with a contaminant source, nor do the detections appear to be correlated with the presence of explosives or other organic compounds. The IAGWSP has re-evaluated inorganic background concentrations using the expanded groundwater quality database of 1999, and has submitted a draft report describing background conditions. The population characteristics of the remaining eight metals were determined to be consistent with background.

Figure 3: VOCs in Groundwater Compared to MCLs/HAs

For validated data between March and June 2004, one well, MW-80M2 (Western Boundary) had a first time validated detection of chloromethane above the MCL of 3 ppb. Three wells,

MW-303M2, MW-315M1 (J-1 Range), and MW-276M3 (Western Boundary), had first time validated detections of various other VOCs below the MCL/HAs.

Exceedances of drinking water criteria for VOCs are indicated in five general areas: Monument Beach Field Well (02-12), CS-10 (wells 03MW0007A, 03MW0014A, and 03MW0020), LF-1 (well 27MW0017B), FS-12 (wells MW-45S, 90MW0003, and ECMWSNP02D), and in the J-1 Range (MW-187D). CS-10, LF-1, and FS-12 are sites located near the southern extent of the Training Ranges that are currently under investigation by AFCEE under the Superfund program.

Exceedances of drinking water criteria were measured for tetrachloroethylene (PCE) at CS-10, for vinyl chloride at LF-1, and for toluene, 1,2-dichloroethane, and ethylene dibromide (EDB) at FS-12. These compounds are believed to be associated with the sites under investigation by AFCEE. Detections of benzene, tert-butyl methyl ether, and chloromethane at J-1 Range well 187D and chloromethane at Bourne well 02-12M1 are currently under investigation.

Figure 4: Chloroform in Groundwater Compared to MCLs

Chloroform has been widely detected in groundwater across the Upper Cape as stated in a joint press release from USEPA, MADEP, IRP, and the Joint Programs Office. The Cape Cod Commission (2001) in their review of public water supply wells for 1999 found greater than 75% contained chloroform with an average concentration of 4.7 ug/L. The IRP has concluded chloroform is not the result of Air Force activities. A detailed discussion of the presence of chloroform is provided in the Final Central Impact Area Groundwater Report (06/01). To date, the source of the chloroform in the Upper Cape groundwater has not been identified.

Figure 5: SVOCs in Groundwater Compared to MCLs/HAs

For validated data between March and June 2004, no wells had first time validated detections of SVOCs above or below the MCL/HAs.

Exceedances of drinking water criteria for SVOCs are scattered throughout the study area. All exceedances of drinking water criteria for SVOCs were measured for bis (2-ethylhexyl) phthalate (BEHP), with the exception of one well, MW-264M1, which had a detection of benzo(a)pyrene at concentrations of more than twice the HA. Detections of BEHP are presented separately in Figure 6.

The 2,6-DNT detected at well 41M1 is interesting in that the explosives analysis of this sample by EPA Method 8330 did not detect this compound. The reporting limit under Method 8330 is much lower than the limit for the SVOC method. Well 41M1 was installed along the groundwater flow path downgradient from well 2M2, which has had RDX detected above the HA in the explosives analysis as indicated above. The 2,6-DNT detection at well 41M1 was in the second sampling round, and samples from this well did not have 2,6-DNT detected by either the SVOC method or the explosives method in the first, third, fourth, or fifth sampling rounds.

Figure 6: BEHP in Groundwater Compared to MCLs

Exceedances of drinking water criteria for bis (2-ethylhexyl) phthalate (BEHP) are scattered throughout the study area. BEHP is believed to be largely an artifact of the investigation methods, introduced to the samples during collection or analysis. However, the potential that some of the detections of BEHP are the result of activities conducted at MMR has not been ruled out.

A detailed discussion of the presence of BEHP is provided in the Draft Completion of Work Report (7/98) and subsequent responses to comments. The theory that BEHP mostly occurs as an artifact, and is not really present in the aquifer, is supported by the results of subsequent sampling rounds that show much lower levels of the chemical after additional precautions were taken to prevent cross-contamination during sample collection and analysis. Only four locations (out of 82) showed BEHP exceedances in consecutive sampling rounds: 28MW0106 (located near SD-5, a site under investigation by AFCEE), 58MW0006E (located at CS-19), and 90WT0013 (located at FS-12), and 146M1 (located at L Range). Subsequent sampling rounds at all these locations have had results below the MCL. Five wells (27MW0705, 27MW2061, 164M1, 188M1 and 196M1) had BEHP exceedances in the year 2002 results.

Figure 7: Herbicides and Pesticides in Groundwater Compared to MCLs/HAs

For validated data between March and June 2004, no wells had first time validated detections of herbicides or pesticides above or below the MCL/HAs.

There has been one exceedance of drinking water criteria for pesticides, at well PPAWSMW-1. A contractor to the United States Air Force installed this monitoring well at the PAVE PAWS radar station in accordance with the Massachusetts Contingency Plan (MCP), in order to evaluate contamination from a fuel spill. The exceedance was for the pesticide dieldrin in a sample collected in June 1999. This well was sampled again in November 1999. The results of the November sample indicate no detectable pesticides although hydrocarbon interference was noted. It appears from the November sample that pesticides identified in the June sample were false positives. However, the June sample results cannot be changed when following the EPA functional guidelines for data validation. The text of the validation report for the June sample has been revised to include an explanation of the hydrocarbon interference and the potential for false positives.

There has been one exceedance of drinking water criteria for herbicides, at well 41M1. This response well was installed downgradient of the Impact Area, as indicated above (see discussion for Figure 5). The exceedance was for the herbicide pentachlorophenol in a sample collected in May 2000. There were no detections above the MCL of this compound in the three previous sampling rounds in 1999, nor in the subsequent sampling rounds in 2000, 2001, and 2002.

Figure 8: Perchlorate in Groundwater Compared to a 4 ppb Concentration

For data validated in June 2004, three wells, MW-305M1, MW-307M3, and MW-310M1 (J-1 Range), had first time validated detections of perchlorate above the concentration of 4 ppb. Nine wells, MW-319M2, RS003P (J-2 Range), MW-217M2 (J-3 Range), 58MW0005E, MW-216M1 (Impact Area), MW-314S, MW-320S and M1 (Northwest Corner), and MW-269M1 (Western Boundary), had first time validated detections of perchlorate below the concentration of 4 ppb.

Sampling and analysis of groundwater for perchlorate was initiated at the end of the year 2000 as part of the IAGWSP. Exceedances of the 4 ppb concentration of perchlorate are indicated in six general areas:

- Demo Area 1 (wells 19, 31, 34, 35, 36, 73, 75, 76, 77, 78, 114, 129, 139, 162, 165, 172, 210, and 211);
- Impact Area (well 91);

- J Ranges and southeast of the J Ranges (wells 127, 130, 132, 143, 163, 193, 197, 198, 232, 247, 250, 263, 265, 289, 293, 300, 302, 303, 305, 307, 310, and well 90MW0054);
- Landfill Area 1 (27MW0031B);
- CS-18 (well 16MW0001); and
- Northwest Corner of Base Boundary (wells 4036009DC, 270, 277, 278, and 279).

A magenta concentration contour line is used in Figure 8 and the inset to show the extent of perchlorate greater than a 4 ppb concentration of perchlorate. This extent is based on samples from monitoring wells and samples collected during the drilling process ("profile" samples).

Demo Area 1 has a single well-defined source area and extent of contamination. The downgradient extent of the perchlorate plume has been determined with the installation of monitoring wells along the power line right-of-way east of Fredrickson Road.

The Impact Area has a single exceedance of the 4 ppb concentration of perchlorate at MW-91S.

The J Ranges have two perchlorate plumes, one that originates from the J-1 Range Interberm Area (northern plume) and a second that originates in the J-3 Range Demolition Area (southern plume). A third plume, which originates at J-2 Range is also in the process of being delineated. The J-1 Interberm Plume has several exceedances of the 4 ppb concentration of perchlorate in wells installed downgradient at MW-265, MW-303, MW-305, MW-307 and MW-310. The J-3 Range Demolition Plume has exceedances of the 4 ppb concentration of perchlorate in several wells immediately downgradient of the source area, centered at MW-198 and further downgradient centered at 90MW0054. As currently defined, the J-2 Range perchlorate plume consists of two validated detections above the 4 ppb concentration of perchlorate at MW-130 and MW-263. Validated detections of perchlorate above the concentration of 4 ppb have been reported for monitoring wells MW-289, MW-293, MW-300, and MW-302 located downgradient from the J-2 Range. Additional groundwater data currently being validated, and data from additional wells to be installed in the coming months, will aid in further delineating the extent of the J-2 Range plume. All the J ranges are currently under investigation and the plumes will be updated and refined as new validated data is received.

The Northwest Corner has a perchlorate plume extending from Canal View Road at the base boundary to the Cape Cod Canal. This area is under investigation and the plume will be updated and refined as new data is received.

The LF-1 and CS-18 areas are under investigation by AFCCEE in the Superfund Program.

Rush (Non-Validated) Data

Rush data are summarized in Table 5. These data are for analyses that are performed on a fast turnaround time, typically 1-5 days. Explosive analyses for monitoring wells, and explosive and VOC analyses for profile samples, are typically conducted in this timeframe. Other types of analyses may be rushed depending on the proposed use of the data. The rush data have not yet been validated, but are provided as an indication of the most recent preliminary results. Table 5 summarizes only detects, and does not show samples with non-detects.

The status of the detections with respect to confirmation using Photo Diode Array (PDA) spectra is indicated in Table 5. PDA is a procedure that has been implemented for the explosive analysis, to reduce the likelihood of false positive identifications. Where the PDA status is "YES" in Table 5, the detected compound is verified as properly identified. Where the status is "NO", the identification of an explosive has been determined to be a false positive. Where the status is blank, PDA has not yet been used to evaluate the detection, or PDA is not applicable because the analyte is a VOC. Most explosive detections verified by PDA are confirmed to be present upon completion of validation. Table 5 includes the following detections:

Western Boundary

- Groundwater samples from 02-03M2; 02-04M1; 02-05M1, M2, and M3; and 97-2C had detections of perchlorate. The results were similar to previous sampling rounds.

Northwest Corner

- Groundwater samples from MW-301S; MW-309M1 and S; MW-314S; RSNW03; and RSNW06 had detections of perchlorate. The results were similar to the previous sampling rounds.
- A groundwater sample from RSNW01 had a detection of perchlorate. This is the first detection of perchlorate in this well since September 2003.
- A groundwater sample from MW-332S had a detection of perchlorate. This is the first sampling event for this well and the concentration was more than twice the concentration detected in the profile results.
- Profile samples from MW-333 (NWP-19) had detections of explosives. None of the explosive compounds were confirmed by PDA spectra. No well screens will be set at this location, and the borehole has been backfilled.
- Profile samples from MW-338 (NWP-19b) had detections of perchlorate and explosives. Perchlorate was detected in one interval at 7 feet below the water table. None of the detections of explosive compounds were confirmed by PDA spectra. Well screens were set at the depth (-2 to 8 ft bwt) corresponding to the perchlorate detection, at the depth (45 to 55 ft bwt) corresponding to RDX detections at MW-323M2, and at the depth (115 to 125 ft bwt) corresponding to the RDX detection at MW-323M1.

J-1 Range

- A groundwater sample from MW-286M2 had a detection of RDX that was confirmed by PDA spectra. The results were similar to the previous sampling rounds.

J-2 Range

- Profile samples from MW-335 (J2P-26) had detections of perchlorate and explosives. Perchlorate was detected in two intervals at 110 and 150 feet below the water table. Of the explosive compounds, only 2,6-DNT was confirmed by PDA spectra, but with interference in two intervals at 10 and 20 feet below the water table. Well screens were set at the depth (10 to 20 ft bwt) corresponding to the 2,6-DNT detection, at the depth (105 to 115 ft bwt)

corresponding to the shallowest perchlorate detection, and at the depth (145 to 155 ft bwt) corresponding to the deepest perchlorate detection.

- Profile samples from MW-336 (J2P-25) had detections of explosives and VOCs. Of the explosive compounds, 2-nitrotoluene was confirmed by PDA spectra, but with interference in two intervals at 159 and 199 feet below the water table. 2,4-DANT was confirmed by PDA spectra, but with interference, in one interval at 229 feet below the water table. Well screens will tentatively be set at the depth (24 to 34 ft bwt) corresponding to perchlorate detections at MW-158M2 and at the depth (219 to 229 ft bwt) corresponding to the 2,6-DANT detection. The decision for both screen settings will be revisited after profile results from MW-342 (J2P-41) have been received.
- Profile samples from MW-337 (J2P-39) had detections of explosives. None of the detections of explosive compounds were confirmed by PDA spectra. Well screens will be set at the depth (117 to 127 ft bwt) corresponding to the maximum perchlorate detection in profile results from MW-327, and at the depth (183 to 193 ft bwt) corresponding to the deepest perchlorate detection in profile results from MW-327.
- Profile samples from MW-339 (J2P-19) had detections of perchlorate and explosives. Perchlorate was detected in five intervals from 92 to 132 feet below the water table. Of the explosive compounds, RDX was confirmed by PDA spectra in two intervals at 112 and 132 feet below the water table. 2-Nitrotoluene was confirmed by PDA spectra, but with interference, in two intervals at 82 and 192 feet below the water table. Well screens will be set at the depth (105 to 115 ft bwt) corresponding to the shallowest RDX detection and at the depth (125 to 135 ft bwt) corresponding to the maximum perchlorate detection and deepest RDX detection.

J Range

- A groundwater sample from MW-288M1 had a detection of RDX that was confirmed by PDA spectra. The results were similar to previous sampling rounds.

4. DELIVERABLES SUBMITTED

Deliverables submitted during the reporting period include the following:

Monthly Progress Report # 86 for May 2004	06/09/2004
Demo Area 2 Interim Groundwater Draft Data Summary Report	06/22/2004
J-2 Range Draft Supplemental Geophysical Anomaly Investigation Work Plan	06/24/2004
Demo Area 1 Groundwater RRA Draft System Performance and Ecological Impact Monitoring Plan	06/24/2004

5. SCHEDULED ACTIONS

Figure 9 provides a Gantt chart updated to reflect progress and proposed work. The following documents are scheduled to be submitted in July and early August:

- Demo Area 2 Soil Berm RRA Final Work Plan
- MSP Phase III Final Letter Report
- Gun and Mortar Positions Draft Final Report

The following documents are being prepared or revised during July and early August:

- Central Impact Area Soil Final Report
- J-1 Range Soil Draft Report
- J-2 Range Soil Draft Report
- J-3 Range Soil Draft Report
- L Range Soil Draft Report
- L Range Groundwater Draft Report
- Training Areas Draft Data Summary Report
- Western Boundary Draft Report
- Former K Range Draft Data Summary Report
- Demo Area 2 Groundwater Final Data Summary Report
- Demo Area 1 Soil Draft Final Feasibility Study Screening Report
- Demo Area 1 Groundwater Final Feasibility Study
- Central Impact Area Soil Draft Feasibility Study Screening Report
- Central Impact Area Groundwater Draft Feasibility Study
- Demo Area 1 Groundwater Draft Remedy Selection Plan

Profiling methods may include: Volatiles, Explosives, and Perchlorate

Groundwater methods include: Volatiles, Semivolatiles, Explosives,

Pesticides, Herbicides, Metals, Perchlorate, and Wet Chemistry

Other Sample Types methods are variable

SBD = Sample Begin Depth, measured in feet bgs

SED = Sample End Depth, measured in feet bgs

BWTS = Depth below water table, start depth, measured in feet

BWTE = Depth below water table, end depth, measured in feet

MW-337-05	MW-337	06/21/2004	PROFILE	180	180	53	53

Profiling methods may include: Volatiles, Explosives, and Perchlorate

Groundwater methods include: Volatiles, Semivolatiles, Explosives,

Pesticides, Herbicides, Metals, Perchlorate, and Wet Chemistry

Other Sample Types methods are variable

SBD = Sample Begin Depth, measured in feet bgs

SED = Sample End Depth, measured in feet bgs

BWTS = Depth below water table, start depth, measured in feet

BWTE = Depth below water table, end depth, measured in feet
