MONTHLY PROGRESS REPORT #101
FOR AUGUST 2005

EPA REGION I ADMINISTRATIVE ORDERS SDWA 1-97-1019 and 1-2000-0014

MASSACHUSETTS MILITARY RESERVATION
TRAINING RANGE AND IMPACT AREA

The following summary of progress is for the period from August 1 to August 31, 2005. Scheduled actions are for the six-week period ending October 14, 2005.

1. SUMMARY OF REMEDIATION ACTIONS

The following is a description of remediation actions taken as part of or in preparation for Rapid Response Action (RRA) Plans for various Areas of Concern at Camp Edwards through August 31, 2005. An RRA is an interim action that may be conducted prior to risk assessments or remedial investigations to address a known, ongoing threat of contamination to groundwater and/or soil.

Demo Area 1 Groundwater RRA

The Demo Area 1 Groundwater RRA consists of the removal and treatment of contaminated groundwater to control further migration of explosives and perchlorate. Extraction, treatment, and recharge systems (ETR) at Frank Perkins Road and Pew Road include single extraction wells, ex-situ treatment processes to remove explosives and perchlorate from the groundwater, and injection wells to return treated water to the aquifer.

The Pew Road ETR continues operation at a flow rate of 100 gallons per minute (gpm). Perchlorate and hexahydro-1,3,5-trinitro-1,3,5-triazine (RDX) have been detected in influent samples. The Granular Activated Carbon (GAC) media was exchanged in the first and second pair of treatment vessels on March 9, 2005. Perchlorate breakthrough was detected after the first and second pairs of GAC vessels. RDX has not been detected in any mid-fluent samples. Perchlorate and RDX have not been detected in samples collected from the effluent. The second GAC exchange (first and second pair of vessels) was conducted on August 1, 2005. The system was backwashed following the GAC exchange and placed back on-line August 3, 2005. As of August 26, 2005, approximately 48 million gallons of water have been treated and re-injected at the Pew Road ETR System.

The Frank Perkins Road ETR continues operation at a flow rate of 220 gpm. Perchlorate, RDX, and octahydro-1,3,5,7-tetranitro-1,3,5,7-tetrazocine (HMX) have been detected in influent samples. Perchlorate was detected in mid-fluent samples collected after the first pair of GAC vessels in each of the three treatment containers. The GAC vessels are followed by ion exchange (IX) vessels, which are designed for treatment of perchlorate. Perchlorate and RDX have not been detected in mid-fluent samples collected after the IX vessels or in effluent samples. As of August 26, 2005, approximately 104 million gallons of water had been treated and re-injected at the Frank Perkins Road ETR System.

Demo Area 1 Soil RRA

The Demo Area 1 Soil RRA consists of the removal of all geophysical anomalies within the perimeter road (7.4 acres) and the removal and thermal treatment of contaminated soil from in and around the Demo 1 kettle hole. A total of 16,641 cubic yards of soil was excavated at Demo Area 1, with an additional 195 cubic yards excavated at Demo Area 1 burn pits.

All equipment and debris has been removed from Demo Area 1 and a completion of work report is being prepared.

Impact Area Soil RRA

The Impact Area Soil RRA consists of the removal and treatment of contaminated soil and targets at Targets 23 and 42. A total of 590 cubic yards was removed from Target 23 and a total of 796 cubic yards was removed from Target 42 and treated in the Thermal Treatment Unit.

The Draft Central Impact Area Targets 23 and 42 Rapid Response Action Completion of Work Report was submitted on August 18, 2005.

J-2 Range Soil RRA

The J-2 Range Soil RRA consists of the removal and treatment of soil in six general areas within the J-2 Range that contain explosives and perchlorate. Soil removal locations include Twin Berms Area, Berm 2, Berm 5, Fixed Firing Points 3 and 4 (FFP-3 and 4) and adjacent Range Road Burn Area (RRBA), Disposal Area 1, and Disposal Area 2. A total of 6,500 cubic yards of soil was excavated and treated at the Thermal Treatment Unit. Table 1 shows a grid summary of the excavations and munitions recovered as of August 25, 2005.

UXO clearance, excavation, and post-excavation sampling continued at the J-2 Range Polygon 2.

J-3 Range Soil RRA

The J-3 Range Soil RRA consists of the removal and treatment of contaminated soil from the Demolition Area and Melt/Pour Building Area. A total of 1,085 cubic yards of soil was excavated from the Demolition Area. A total of 1,146 cubic yards of soil was excavated from the Melt/Pour Building Area. Soil has been treated in the Thermal Treatment Unit or containerized for off-site disposal.

Site work was not conducted for the J-3 Range soil RRA during August.

2. SUMMARY OF ACTIONS TAKEN

Drilling progress for the month of August is summarized in Table 2.

Table 2. Drilling progress as of August 31, 2005

Boring Number	Purpose of Boring/Well	Total Depth (ft bgs)	Depth to Water Table (ft bgs)	Completed Well Screens (ft bgs)
DP-374	Northwest Corner (CP-32A)	156	80	
DP-375	Northwest Corner (CP-32C)	217	83	
DP-376	Northwest Corner (CP-32D)	140	77	
DP-387	J-1 Range (J1E-DP6)	165	94	
MW-388	J-2 Range (J2P-57/15E)	293	71	86-96; 145-155; 175-185
MW-392	J-3 Range (J3P-40)	327	102	
MW-393	J-2 Range (J2P-60/20E)	233	88	
DP-394	Northwest Corner (CP-32F)	130	82	

ft bgs = ft below ground surface

Completed well installation at MW-388 (J2P-57/15E). Completed drilling at DP-374 (CP-32A), DP-375 (CP-32C), DP-376 (CP-32D), DP-387 (J1E-DP6), MW-392 (J3P-40), and DP-394 (CP-32F); and commenced drilling at MW-393 (J2P-60/20E). Well development of recently installed wells was conducted.

Samples collected during the reporting period are summarized in Table 3. Groundwater profile samples were collected from DP-374, DP-375, DP-376, DP-387, MW-392, MW-393, and DP-394. Groundwater samples were collected from recently installed wells, residential wells, and as part of the August round of the 2005 Long-Term Groundwater Monitoring (LTGM) Plan. The August round of the 2005 Demo 1 SPEIM plan was completed. Pre- and post-BIP soil samples (for nineteen (19) 2.36-inch rockets) were collected at the J-2 Range. Supplemental soil samples were collected on August 5, 18, and 31, 2005, from the detonation of ordnance conducted in the High Use Target Area (HUTA). A post-excavation sample was collected in July at Polygon 2 in the J-2 Range as part of the soil RRA. This sample was not previously reported and is included in Table 3. Process water samples were collected from the Pew Road and Frank Perkins Road ETR systems and the FS-12 treatment system. Surface water samples were collected near a public beach, a private beach, and near the spit at Snake Pond.

Anomaly investigation continued in Grid K-36 as part of the J-1 Range Supplemental Geophysical Anomaly Investigation. Table 4 shows a grid sheet summary for excavations and munitions recovered for the J-1 Range Geophysical Investigation as of August 25, 2005.

There have been no munitions and explosives of concern (MEC) items destroyed in the controlled detonation chamber (CDC) during the month of August.

The following are the notes from the August 11, 2005 Technical Team meeting of the Impact Area Groundwater Study Program office at Camp Edwards:

<u>Southeast Ranges Update - J-1 East</u>

- Dave Hill (IAGWSP) and Jay Ehret (USACE) discussed the status of J-1 East groundwater investigation. A Project Note summarizing the planned investigation approach was submitted to the agencies last Friday. Pending approval from the Board of Selectman, it is anticipated that drilling at the fire station location will begin before mid-September. The existing well at this location will be extended depth-wise using a drive point rig. The ROA paperwork for the proposed locations (five proposed locations, including two contingency locations) on Grand Oak and Little Acorn Roads was submitted on August 10, 2005. Permanent wells using the sonic drill rig will be installed at these locations. Jane Dolan (EPA) stated that she will be submitting comments on the Project Note for the investigation approach. Mr. Hill stated that preparation of the Project Note on the groundwater contamination source identification is underway and will be submitted in approximately one week.

- Pam Richardson (IAGWSP) reported on the status of the residential well sampling on East, West, and Park Roads. Eighteen letters have been sent out. To date, four home owners have responded and granted permission to have their wells sampled. One resident uses their well for irrigation only. Sampling at the other three locations will occur next week. Lynne Jennings (EPA) asked for a map showing the residences in this area and for an information fact sheet, which was requested at a public meeting last week. Ms. Richardson stated that she can provide this information today.

- Ms. Richardson reported on the status of the AFCEE irrigation wells. The AFCEE wells are irrigation wells that have been sampled in the past (approximately 1999), and are in close proximity to the base. To date, IAGWSP has received responses from 6 of 10 requests to sample these locations. Two respondents granted permission to sample; one denied permission; and three wells no longer exist. The two locations where permission to sample granted will be added to next week's sampling schedule.

- Mr. Ehret stated that Peters Pond resident sampling is scheduled to occur on August 30, 2005. Ms. Dolan has made arrangements for sample analysis using the low level analytical method at the EPA Laboratory.

- Ms. Jennings mentioned that the USGS investigation (well installations using USGS drill rig) at the residential location near Peters Pond has been approved, and is anticipated to begin approximately August 29, 2005.

Southeast Ranges Update – J-2 East

- Jay Ehret (USACE) reported on the status of the J-2 East investigation. Location J2E-20/J2P-60 (on the Coast Guard access road) and J2E-12/J2P-58 (on Jefferson Road) are scheduled to begin drilling on August 15, and August 24, respectively. Well installation at these locations will occur in early September.

Southeast Ranges Update – J-1 Supplemental Geophysical Investigation

- Darrin Smith (USACE) provided an update on the status of the J-1 Supplemental Investigation. They are currently working on the fourth grid (K-36) of the seventeen identified priority 1 grids. The investigation in grids J-12 and K-34 is complete. No Munitions and Explosives of Concern (MEC) burial pits or burn pits were uncovered in these grids. In Grid I-30, which is partially complete, no MEC burial or burn pits have been uncovered, and most of the targeted anomalies investigated have been single impacted 81mm mortars. In grid K-36, where investigation continues, two MEC burial pits have been uncovered to date. One of these MEC burial pits (K36-BLP-001) contained multiple electronic explosive devices (EEDs) and stab detonators (both MEC) and various munitions debris (MD), and range related debris (RRD) (one RRD items is potentially a burn kettle). The other MEC burial uncovered (K36-BLP-002) contained multiple scattered non-M7 propellant grains (MEC), and various MD and RRD. Additional details, including the number and type of items recovered from each grid, are included in the Weekly Grid Sheet Summary and the burial/burn pit e-mail updates. Jane Dolan (EPA) requested additional information on the stab detonators and propellants used in this area. Mr. Smith will provide the requested information if any is available.

Central Impact Area FSSR – Alternative #2 Review

- Bill Gallagher (IAGWSP) led a discussion, supported by Chris Abate (AMEC) and Kim Groff (AMEC), on the CIA FSSR Alternative #2 Modeling Results. Slides were displayed and handouts provided. Alternative #2 involves no active groundwater remediation and three partial soil removal variants (14, 24, and 80 acres). Alternative #2 was modeled using four metrics: 1) maximum RDX concentration, 2) plume volume (RDX > 0.6 ppb), 3) mass of RDX in the aquifer (RDX > 0.6 ppb), and 4) RDX plume projections (for +5, 10, 20, 30, 40 years). One of the objectives of the modeling effort for alternative #2 is to select a representative partial source removal option to carry forward for remaining modeling evaluations. Based on the modeling inputs selected, the estimated model source loading percent reduction is 0% for no removal, 23% for 14 acre removal, 45% for 24 acre removal, 74% for 80 acre removal, and 100% for a theoretical complete (330 acre) removal. Graphs

were presented showing the results for the maximum RDX concentration, dissolved RDX plume volume in aquifer > 0.6 ppb, dissolved RDX plume volume in aquifer > 2 ppb, and dissolved RDX mass in aquifer > 0.6 ppb. The graphs show the reduction of RDX over a 40-year duration under the partial, complete, and no source removal variants. Costs for remediation are estimated at $1.7 million per acre assuming a 2 ft depth of removal. Maps showing the RDX contaminant plume reduction at +5, 10, 20, 30, and 40 years for 14, 24, and 80 acre partial source removals were displayed.

- Several conclusions were discussed, including: 1) the simulation predicts no significant benefit to 14 acre removal compared to current soil condition (which includes CS-19 soil removal), 2) the 24 acre simulation suggests a relative benefit of comprehensive response actions at CS-19 and Tank Alley/Turpentine Road areas, 3) there is a reduced benefit shown in the simulation for partial source removal beyond 24 acres, 4) benefit of 80 acre and theoretical complete removal is limited to the dilute portion of the RDX plume volume, and 5) the results are not intended to provide a basis for selection of a removal action, but rather to provide a basis for comparison of simulated alternatives in the FSSR. The proposed next steps forward include: 1) choose the 24-acre source removal alternative for other modeling comparisons, since this removal volume is realistic and balances the drawback of habitat destruction, 2) initiate modeling for alternative #3, and 3) continue to assess all three evaluation criteria (plume volume, maximum RDX concentration, and mass of RDX in the aquifer). Several caveats were emphasized, including: 1) the actual soil areas chosen to represent removal actions on figures are strictly for evaluation purposes, 2) the location of future source removal action and amount of soil to be remediated is not yet determined, and 3) the area to be evaluated for soil remediation in the FS is dependent on additional site characterization work.

- Lynne Jennings (EPA) brought up some questions and concerns during the presentation. EPA would prefer to see plume duration projections up to complete plume removal, and not capped at a 40 year duration. Mr. Gallagher explained that it was necessary to truncate projections at discrete time frames to evaluate and compare options. Ms Jennings indicated that EPA is interested in the percent of aquifer restored within a given timeframe, and that the point of compliance could be a downstream location from the source.

- EPA expressed concern about the 14 acre swath shown to represent the 14 acre removal action. IAGWSP and AMEC representatives clarified that the exact locations of removal actions does not significantly impact the model outcome, and are shown primarily as examples. The actual soil removal volumes and locations will be chosen based on additional site characterization data, described in the Data Gap Characterization Work Plan. However, for the purposes of the FSSR, a consistent theoretical approach for removal actions needs to be used for comparative purposes.

- EPA requested: a calculation of the actual soil acreage modeled, a re-calculation of the associated costs, and a re-creation of the graph summarizing this information. IAGWSP agreed to provide this information. EPA asked for some time to review this information before committing to moving forward with the proposed steps.

<u>Demo 1 Soil OU RRA COW Update</u>

- Paul Nixon (IAGWSP) reported on the status of the Demo 1 Soil Rapid Removal Action Completion of Work. At this time, all equipment and debris have been removed. A streamlined interim submittal will be provided next week. This report (2-3 page letter with attachments) will include all associated data and supporting information to show that the

RRA objectives have been attained. A traditional completion of work report will follow shortly. IAGWSP requests expedited review of this interim submittal from the agencies so that backfilling and site restoration activities can begin in a timely manner.

BIP Update

- Ben Gregson (IAGWSP) discussed the blow in place event which occurred last Thursday (August 4, 2005), and handed out results from the post BIP composite samples which were collected on Friday from the crater base and sidewalls (using standard BIP sampling protocol). Destruction of two items remains to be completed. Additional samples will be collected next week. A public meeting will be scheduled for Wednesday (August 17, 2005) to discuss the protocol for notification of such events. Ms. Jennings (EPA) stated that EPA is composing an official information request to the NGB asking for details related to the circumstances leading to the BIP event.

Revised Combined Schedule and Revised 6-Month Look Ahead Update and Handout

- Ben Gregson (IAGWSP) distributed a draft Revised Combined Schedule and revised 6-month look ahead for review. Discussion of the RCS will take place at the next tech meeting (August 25, 2005).

IART Meeting for August 2005

The EPA convened a meeting of the Impact Area Groundwater Review Team on August 23, 2005. The agenda included a Southeast Ranges Boundary Investigation Update, an EPA Update on the Peter's Pond Investigation, and a discussion on the Demo 1 Remedy Selection Plan.

The following are the notes from the August 25, 2005 Technical Team meeting of the Impact Area Groundwater Study Program office at Camp Edwards:

Draft Soil Treatability Study Work Plan

- Bill Gallagher (IAGWSP) provided a presentation on the general concepts contained in the Draft Soil Treatability Study Work Plan. Both the work plan and the presentation were provided as handouts. The study is designed to evaluate two different types of in situ treatment technologies to remediate widespread low-level explosives contamination in soil. The results of the study are expected to be useful to evaluate cleanup alternatives for the Central Impact Area (CIA) and for Gun and Mortar Firing Positions. The two technologies are Alkaline Hydrolysis for chemical degradation and Organic Amendments for biological degradation of explosives. Field study components of this workplan were previously included in the Draft Post-Screening Investigation Work Plan for the CIA (8/15/05). The IAGWSP hopes to get as much as possible of the preliminary treatability study work done this year, so that field studies can get underway in the spring of 2006. The field studies are expected to take 6-12 months.

- Ben Gregson (IAGWSP) indicated that the Army would like to get regulatory input on this work plan in the usual 3-week time frame, but would also appreciate any earlier partial plan approvals if possible. The IAGWSP is willing to provide a technical presentation on the plan if that will assist the agencies with their evaluation. Len Pinaud (MADEP) asked for a written opinion from Karen Wilson (IAGWSP) on the natural resources impacts of the treatment technologies.

South East Ranges – J-1 Groundwater Investigation Update

- Dave Hill (IAGWSP) and Jay Ehret (USACE) presented the status of J-1 East groundwater investigation. Pending the town's legal review of the easement, it is anticipated that drilling at the fire station location will begin the week of 8/29/05. Analytical data from three private wells in the Peters Pond and Pimlico Pond area are expected by 8/26/05. A map was handed out showing the status of sampling permissions requested and granted in this area.

- Pam Richardson (IAGWSP) reported that two of the AFCEE wells in the Pinecrest Road area were sampled. Len Pinaud (MADEP) requested an electronic version of the map handout. Mr. Ehret indicated that drilling could begin at J1P-34 or -35 at the end of September. NHESP approval is expected soon for J1P-33, such that drilling at this location could begin around Labor Day after J2E-20. Elliot Jacobs (MADEP) provided info on well locations west of Wakeby Pond that were used to delineate the JBT plume. Mike Goydas (ECC) indicated that some of these locations were reviewed and were found to be too shallow for use by IAGWSP. Mr. Pinaud indicated that MADEP can provide information on vertical movement near the pond that IAGWSP should consider.

South East Ranges – J-1 Project Notes

- Dave Hill (IAGWSP), Jane Dolan (EPA), and others discussed the status of the recent soil and groundwater Project Notes (PN). Regarding general format, IAGWSP would like these PNs to be used for developing concurrence on scope without having to repeat procedural boilerplate.

- Ms. Dolan requested that IAGWSP broaden its consideration of possible source areas beyond those identified in the Supplemental Geophysical Investigation PN. Mr. Hill indicated that the plan is to investigate magnetic anomalies, since a relationship has been observed between anomalies and sources of contamination. Discussion ensued of what other source areas might exist, and Ms. Dolan asked that a Comment Resolution Meeting be scheduled (the meeting was held later in the day on 8/25/05). IAGWSP is developing a response to EPA comments on the Groundwater PN.

Revised Combined Schedule – Revised

- Ben Gregson (IAGWSP) distributed a draft Revised Combined Schedule (as of 8/21/05) and discussed significant variations from the prior version (as of 5/22/05). These variations are also indicated on the schedule by columns showing the previous start and finish dates, the current anticipated dates, and the variance in working days. The following notes are for action items and some significant changes.

- EPA asked that a version of the Demo 1 Groundwater draft Decision Document expected on 9/28/05 be provided without the responsiveness summary one week earlier. The J-1 Range Soil RI was discussed in terms of UXO staffing levels and whether further delays in the field schedule could be avoided; this was also a topic for J-2 Range**.** IAGWSP agreed to discuss and provide further information on UXO staffing levels to EPA. IAGWSP also agreed to provide a schedule for drilling J1P-29 and -30 by 9/9/05. Lynne Jennings (EPA) suggested a Groundwater RRA might also be considered for the J-1 North plume. EPA requested a meeting to discuss whether more soil data are needed prior to completing the draft J-3 Range Soil RI Report. IAGWSP is revising the schedule for the CIA Soil RI and FSSR based on recent progress; the Post Screening Investigation (PSI) will be conducted concurrently, and PSI results will be incorporated in later RI and FS stages.

3. SUMMARY OF DATA RECEIVED

Validated data were received during August 2005 for Sample Delivery Groups (SDGs): ARM0012, ARM0013, ARM0014, ARM0015, ARM0016, ARM0017, ARM0018, ARM0019, ARM020, ARM021, ARM022, ARM023, CE0495, CEO503, CEO504, CEO505, CEO506, CEO507, CEM108, CEM109, EC0722, EC0728, EC0809, EC0822, GCE277, GCE278, GWA007, SRM019, SRM020, SRM021, SRM022, SRM023, SRM024, SRM025, SRM026, and SRM027.

These SDGs contain results for 292 groundwater samples from residential, supply and monitoring wells; 32 process water samples from the Frank Perkins and Pew Road ETR systems and from the FS-12 treatment system; 7 soil grab and soil grid samples from the Former A Range; 7 soil samples from the Former A Range for TCLP (Toxicity Characteristic Leaching Procedure) leachate analysis; and 3 surface water samples from Snake Pond.

Validated Data

Table 5 summarizes the detections that exceeded an EPA Maximum Contaminant Level (MCL) or Health Advisory (HA) for drinking water, or exceeded a 4 ppb concentration for perchlorate, sorted by analyte, since 1997. Table 5 is updated on a monthly basis; discussions in the text are updated on the same schedule as Figures 1 through 8, which are discussed later in this section.

Table 6 summarizes first-time validated detections of explosives below the MCL/HA for drinking water or of perchlorate below a 4 ppb concentration received from July 29, 2005 through August 26, 2005. First-time validated detections of VOCs, SVOCs, herbicides and pesticides are included and discussed quarterly in the March, June, September, and December Monthly Progress Reports. Metals, chloroform, and BEHP are excluded from Table 6 for the following reasons: metals are a natural component of groundwater, particularly at levels below MCLs or HAs; detections of chloroform are pervasive throughout Cape Cod and are not likely the result of military training activities; and BEHP is believed to be largely an artifact of the investigation methods and introduced to the samples during collection or analysis.

Figures 1 through 8 depict the cumulative results of groundwater analyses for the period from the start of the Impact Area Groundwater Study (July 1997) to the present. Each figure depicts results for a different analyte class:

- Figure 1 shows the results of explosive analyses by EPA Method 8330. This figure is updated and included each month.
- Figure 2 shows the results of inorganic analyses (collectively referred to as “metals”, though some analytes are not true metals) by methods E200.8, 300.0, 350.2M, 353M, 365.2, CYAN, IM40MB, and IM40HG. This figure is updated and included quarterly in the March, June, September, and December Monthly Progress Reports.
- Figure 3 shows the results of Volatile Organic Compound (VOC) analyses by methods OC21V, OC21VM, 504, 8021W, and SW8260 exclusive of chloroform detections. This figure is updated and included quarterly in the March, June, September, and December Monthly Progress Reports.
- Figure 4 shows the chloroform results using the Volatile Organic Compound (VOC) analyses by method OC21V and OC21VM. This figure is updated and included semi-annually in the June and December Monthly Progress Reports.

- Figure 5 shows the results of Semi-Volatile Organic Compound (SVOC) analyses by methods OC21B and SW8270, exclusive of detections of bis (2-ethylhexyl) phthalate (BEHP). This figure is updated and included quarterly in the March, June, September, and December Monthly Progress Reports.
- Figure 6 shows the BEHP results using the Semi-Volatile Organic Compound (SVOC) analyses by methods OC21B and SW8270. This figure is updated and included semi-annually in the June and December Monthly Progress Reports.
- Figure 7 shows the results of Pesticide (method OL21P) and Herbicide (method 8151) analyses. This figure is updated and included quarterly in the March, June, September, and December Monthly Progress Reports.
- Figure 8 shows the results of Perchlorate analysis by method E314.0. This figure is updated and included each month.

The concentrations from these analyses are depicted in Figures 1 through 7 compared to Maximum Contaminant Levels (MCLs) or Health Advisories (HAs) published by EPA for drinking water. For Figures 1 through 7, a red circle is used to depict a well where the concentration of one or more analytes was greater than or equal to the lowest MCL or HA for the analyte(s). A yellow circle is used to depict a well where the concentration of all analytes was less than the lowest MCL or HA. A green circle is used to depict a well where the given analytes were not detected in groundwater samples. For Figure 8, a red circle is used to depict a well where the concentration of perchlorate was greater than or equal to 4 ppb. An orange circle is used to depict a well where the concentration of perchlorate is above 1 ppb and below 4 ppb. A yellow circle is used to depict a well where the concentration of perchlorate was less than 1 ppb. A green circle is used to depict a well where perchlorate was not detected in groundwater samples. For all figures, an open circle is used to depict a proposed well where the analytes in question for example, Explosives in Figure 1, have not yet been quantified. A black circle represents a well that has been sampled for analytes, but validated groundwater data is not yet available.

There are multiple labels listed for some wells in Figures 1 through 8, which indicate multiple well screens at different depths throughout the aquifer. The aquifer is approximately 200 to 300 feet thick in the study area. Well screens are positioned throughout this thickness based on various factors, including the results of groundwater profile samples, the geology, and projected locations of contaminants estimated by groundwater modeling. The screen labels are colored to indicate which of the depths had the chemical detected above MCLs/HAs/4 ppb concentration for perchlorate. Generally, groundwater entering the top of the aquifer will move deeper into the aquifer as it moves radially outward from the top of the water table mound. Light blue dashed lines in Figures 1 through 8 depict water table contours. Groundwater generally moves perpendicular to these contours, starting at the center of the 70-foot contour (the top of the mound) and moving radially outward. The rate of vertical groundwater flow deeper into the aquifer slows as groundwater moves away from the mound.

The results presented in Figures 1 through 8 are cumulative, which provides a historical perspective on the data rather than a depiction of current conditions. Any detection at a well that equals or exceeds the MCL/HA/4 ppb concentration for perchlorate results in the well having a red symbol, regardless of later detections at lower concentrations, or later non-detects. The difference between historical and current conditions varies according to the type of analytes. There are little or no differences between historical and current exceedances of drinking water criteria for Explosives, Perchlorate, VOCs, Pesticides, and Herbicides; the minor differences are mentioned in the following paragraphs. There are significant differences

between historical and current exceedances of drinking water criteria for Metals and SVOCs, as described further below.

Figure 1: Explosives in Groundwater Compared to MCLs/HAs

For data validated in August 2005, two wells, MW-130S and MW-368M2 (J-2 Range), had first-time validated detections of RDX above the HA of 2 ppb. Eleven wells, MW-211M2, MW-225M3 (Demo Area 1), MW-242M2 (L Range), MW-249M3 (Former A Range), MW-350M2 (Northwest Corner), MW-369M1 & M2, MW-370M2 (J-1 Range), MW-142M1, and MW-247M1 & M3 (J-3 Range) had first-time validated detections of RDX below the HA of 2 ppb. Two wells, MW-129M1 (Demo Area 1) and MW-368M2 (J-2 Range), had first-time validated detections of HMX below the HA of 400 ppb. Two wells, MW-241M1 and 90LWA0007 (L Range), had first-time validated detections of 2,6-dinitrotoluene (2,6-DNT) below the HA of 5 ppb. Two wells, 90MW0031 and MW-140M1 (L Range), had first-time validated detections of 2,4-diamino-6-nitrotoluene (2,4-DANT) and one well, MW-249M3 (Former A Range), had a first-time validated detection of 1,3,5-trinitrobenzene (1,3,5-TNB). There are no MCL/HAs established for 2,4-DANT and 1,3,5-TNB.

Exceedances of drinking water criteria for explosive compounds are indicated in six general areas:

- Demo Area 1 (wells 19, 31, 34, 73, 76, 77, 114, 129, 165, 210, 211, and 225);
- Demo Area 2 (wells 16, 160, 259 and 262);
- The Impact Area and CS-19 (wells 58MW0001, 58MW0002, 58MW0009E, 58MW0011D, 58MW0016B, 58MW0016C, 58MW0018B; and wells 1, 2, 23, 25, 37, 38, 40, 43, 85, 86, 87, 88, 89, 90, 91, 93, 95, 98, 99, 100, 101, 105, 107, 111, 112, 113, 176, 178, 184, 201, 203, 204, 206, 207, 209, 223, 235, OW-1, OW-2, and OW-6);
- J Ranges and southeast of the J Ranges (wells 45, 58, 130, 132, 147, 153, 163, 164, 166, 171, 191, 196, 198, 215, 218, 227, 234, 247, 265, 289, 303, 306, 324, 326, 343, 346, 368, and wells 90MW0022, 90MW0041, 90MW0054 and 90WT0013).
- Landfill Area 1 (wells 27MW0018A, 27MW0020A, and 27MW0020B); and
- Northwest Corner of Base Boundary (well 323)

Exceedances of drinking water criteria were measured for TNT at Demo Area 1 (wells 19S, 31S, 31M, and 31D) and Southeast of the Ranges (196S). Exceedances of the HA for RDX were noted at all of the locations listed above except at MW-45, MW-196, and the LF-1 wells. Exceedances of drinking water criteria were measured for 2,6-dinitrotoluene (2,6-DNT) at MW-45S. Exceedances of drinking water criteria were measured for 1,3-dinitrobenzene at LF-1 wells 27MW0018A, 27MW0020A and 27MW0020B.

A magenta concentration contour line is used in Figure 1 and Inset A to show the extent of RDX exceeding the HA in these areas. This extent is based on samples from monitoring wells and samples collected during the drilling process (“profile” samples). This extent also considers non-validated data, where the results have been confirmed using Photo Diode Array (PDA). Additional information regarding PDA is provided below under the heading “Rush (Non-Validated) Data”. Concentration contours will be prepared for other areas, and refined for the above areas, when sufficient data are available.

Demo Area 1 has a single well-defined source area and extent of contamination. The estimated extent of RDX exceeding the HA at Demo Area 1 based on the most recent groundwater measurements is indicated by a magenta concentration contour line on Figure 1 and Inset A.

Demo Area 2 has four groundwater exceedances of the RDX HA at MW-16S, MW-160S, MW-259, and MW-262M1. The extent of the contamination is currently under investigation.

The Impact Area has a plume defined by RDX concentrations above the HA of 2 ppb. The plume originates primarily along Turpentine Road and extends downgradient to the east, northeast. Another source of RDX in the Impact Area is CS-19. Portions of CS-19 are currently under investigation by the Air Force Center for Environmental Excellence (AFCEE) under the Superfund program. The extent of RDX has largely been defined in the Impact Area and the investigation phase of the project is nearing completion.

The J Ranges and downgradient areas have five groundwater plumes defined by concentrations of RDX above the HA of 2 ppb. The five plumes originate at the J-1 Range Interberm Area (northern plume in the vicinity of MW-58 and MW-265), the J-2 Range North plume (northern plume extending from MW-130), the J-2 Range East plume (eastern plume including MW-215), the J-3 Range Demolition Area (southern plume extending from MW-163 south to Snake Pond) and the L Range (in an area defined by MW-147 and MW-153 at Greenway Road). All the J ranges and the L Range are currently under investigation and the plumes will be updated and refined as new validated data is received.

The Northwest Corner of the base boundary has one validated detection of RDX in groundwater above the HA of 2 ppb at MW-323M2. The M1 screen in this location has a validated detection of RDX in groundwater below 2 ppb.

Figure 2: Metals in Groundwater Compared to MCLs/HAs

Exceedances of drinking water criteria for metals are scattered throughout the study area. Where two or more rounds of sampling data are available, the exceedances generally have not been replicated in consecutive sampling rounds. The exceedances have been measured for antimony, arsenic, cadmium, chromium, lead, molybdenum, sodium, thallium and zinc. Arsenic (well 7M1), cadmium (52M3), and chromium (7M1) each had one exceedance in a single sampling round in August-September 1999. Two of four lead exceedances (ASP well and 45S) were repeated in another sampling round and the remaining two lead exceedances (wells 2S and 7M1) have not been repeated in previous or subsequent results. Two of the eight molybdenum exceedances were repeated in consecutive sampling rounds (wells 53M1 and 54S). All of the molybdenum exceedances were observed in year 1998 and 1999 results. Seven of the 19 sodium exceedances were repeated in consecutive sampling rounds (wells 2S, 46S, 57M2, 57M1, 145S, ASP well and SDW261160). Eight wells (21S, 57M1, 57M3, 144S, 145S, 148S, 187D, and the ASP well) had sodium exceedances in year 2002, 2003, and/or 2004 results. Zinc exceeded the HA in seven wells, all of which are constructed of galvanized (zinc-coated) steel.

There have been few exceedances of drinking water limits for antimony and thallium since the introduction of the ICP/GFAA and ICP/MS methods, discussed in the next paragraph. None of the 12 antimony exceedances were repeated in consecutive sampling rounds, and only one exceedance (well 187D) was measured in year 2002 results. Eight of the 71 thallium exceedances were repeated in consecutive sampling rounds (wells 7M1, 7M2, 47M2, 52S, 52D, 54S, 54M1, and 94M2). Only two wells (148S and 191M1) have had thallium exceedances in the year 2002. There have been no exceedances of thallium in 2003, 2004 or thus far in 2005.

Groundwater samples sent for metals analysis are analyzed for most metals by Inductively Coupled Plasma (ICP) in accordance with U.S. EPA Contract Laboratory Program Statement of Work ILM04.0. In May of 2001, the IAGWSP began analyzing for antimony and thallium using the GFAA (graphite furnace atomic adsorption) method in accordance with EPA Drinking Water Methods 204.2 (antimony) and 279.2 (thallium) in order to achieve lower detection limits for these metals. Both the ILM04.0 and GFAA methods are subject to false positive results at trace levels due to interferences. As a result, the IAGWSP changed to a new method to achieve lower detection limits for antimony and thallium in January of 2003. Groundwater samples are now analyzed for antimony and thallium by Inductively Coupled Plasma/Mass Spectroscopy (ICP/MS) in accordance with the EPA Method 6020. The ICP/MS Method 6020 has greater sensitivity and the added feature of selectivity for antimony and thallium. These additional methods achieve lower detection limits for these two metals and reduce the number of false positive results.

The distribution and lack of repeatability of the metals exceedances is not consistent with a contaminant source, nor do the detections appear to be correlated with the presence of explosives or other organic compounds. The IAGWSP has re-evaluated inorganic background concentrations using the expanded groundwater quality database of 1999, and has submitted a draft report describing background conditions. The population characteristics of the remaining eight metals were determined to be consistent with background.

Figure 3: VOCs in Groundwater Compared to MCLs/HAs

Exceedances of drinking water criteria for VOCs are indicated in six general areas: Northeast Corner (LRMW003), CS-10 (wells 03MW0007A, 03MW0014A, and 03MW0020), LF-1 (well 27MW0017B), FS-12 (wells MW-45S, 90MW0003, and ECMWSNP02D), and in the J-1 Range (187D). CS-10, LF-1, and FS-12 are sites located near the southern extent of the Training Ranges that are currently under investigation by AFCEE under the Superfund program. Exceedances of drinking water criteria were measured for tetrachloroethylene (PCE) at CS-10, for vinyl chloride at LF-1, and for methylene chloride, toluene, 1,2-dichloroethane, and ethylene dibromide (EDB) at FS-12. These compounds are believed to be associated with the sites under investigation by AFCEE. Detections of benzene, tert-butyl methyl ether, and chloromethane at J-1 Range well 187D and chloromethane at Northeast Corner well LRMW003 are currently under investigation.

Figure 4: Chloroform in Groundwater Compared to MCLs

Chloroform has been widely detected in groundwater across the Upper Cape as stated in a joint press release from USEPA, MADEP, IRP, and the Joint Programs Office. The Cape Cod Commission (2001) in their review of public water supply wells for 1999 found greater than 75% contained chloroform with an average concentration of 4.7 ug/L. The IRP has concluded chloroform is not the result of Air Force activities. A detailed discussion of the presence of chloroform is provided in the Final Central Impact Area Groundwater Report (06/01). To date, the source of the chloroform in the Upper Cape groundwater has not been identified.

Figure 5: SVOCs in Groundwater Compared to MCLs/HAs

Exceedances of drinking water criteria for SVOCs are scattered throughout the study area. All exceedances of drinking water criteria for SVOCs were measured for bis (2-ethylhexyl) phthalate (BEHP), with the exception of two wells. MW-264M1 (J-3 Range) had a detection of benzo(a)pyrene at concentrations of more than twice the HA and MW-241M1 (L Range) had a

detection of naphthalene above the HA of 100 ppb. Detections of BEHP are presented separately in Figure 6 and discussed in the next paragraph.

Figure 6: BEHP in Groundwater Compared to MCLs

Exceedances of drinking water criteria for bis (2-ethylhexyl) phthalate (BEHP) are scattered throughout the study area. BEHP is believed to be largely an artifact of the investigation methods, introduced to the samples during collection or analysis. However, the potential that some of the detections of BEHP are the result of activities conducted at MMR has not been ruled out.

A detailed discussion of the presence of BEHP is provided in the Draft Completion of Work Report (7/98) and subsequent responses to comments. The theory that BEHP mostly occurs as an artifact, and is not really present in the aquifer, is supported by the results of subsequent sampling rounds that show much lower levels of the chemical after additional precautions were taken to prevent cross-contamination during sample collection and analysis. Only four locations (out of 90) showed BEHP exceedances in consecutive sampling rounds: 28MW0106 (located near SD-5, a site under investigation by AFCEE), 58MW0006E (located at CS-19), and 90WT0013 (located at FS-12), and 146M1 (located at L Range). Subsequent sampling rounds at all these locations have had results below the MCL. Eleven wells (27MW0705, 27MW2061, C2-B, C6-C, C7-B, 47M2, 164M1, 168M1, 188M1, 196M1, and 198M1) had BEHP exceedances in the year 2002 and 2003 results. There have been no exceedances of BEHP in 2004 or thus far in 2005.

Figure 7: Herbicides and Pesticides in Groundwater Compared to MCLs/HAs

There has been one exceedance of drinking water criteria for pesticides, at well PPAWSMW-1. A contractor to the United States Air Force installed this monitoring well at the PAVE PAWS radar station in accordance with the Massachusetts Contingency Plan (MCP), in order to evaluate contamination from a fuel spill. The exceedance was for the pesticide dieldrin in a sample collected in June 1999. This well was sampled again in November 1999. The results of the November sample indicate no detectable pesticides although hydrocarbon interference was noted. It appears from the November sample that pesticides identified in the June sample were false positives. However, the June sample results cannot be changed when following the EPA functional guidelines for data validation. The text of the validation report for the June sample has been revised to include an explanation of the hydrocarbon interference and the potential for false positives.

There has been one exceedance of drinking water criteria for herbicides, at well 41M1 (Impact Area). This response well was installed downgradient of the Impact Area. The exceedance was for the herbicide pentachlorophenol in a sample collected in May 2000. There were no detections above the MCL of this compound in the three previous sampling rounds in 1999, nor in the subsequent sampling rounds in 2000, 2001, 2002, and 2003.

Figure 8: Perchlorate in Groundwater Compared to a 4 ppb Concentration

For data validated in August 2005, six wells, MW-286M2, MW-370M2 (J-1 Range), MW-368M1 & M2 (J-2 Range), MW-284M2, and MW-309M1 (Northwest Corner) had first-time validated detections of perchlorate above the concentration of 4 ppb. One well, MW-369M1 (J-1 Range), had a first-time validated detection of perchlorate below the concentration of 4 ppb.

Sampling and analysis of groundwater for perchlorate was initiated at the end of the year 2000 as part of the IAGWSP. Exceedances of the 4 ppb concentration of perchlorate are indicated in six general areas:

- Demo Area 1 (wells 19, 31, 32, 34, 35, 36, 73, 75, 76, 77, 78, 114, 129, 139, 162, 165, 172, 210, 211, 225, 258 and 341);
- Impact Area (well 91);
- J Ranges and southeast of the J Ranges (wells 127, 130, 132, 143, 163, 193, 197,198, 232, 243, 247, 250, 263, 265, 286, 289, 293, 300, 302, 303, 305, 307, 310, 313, 321, 326, 339, 346, 348, 368, 370, and wells 90PZ0211, 90MW0022 and 90MW0054);
- Landfill Area 1 (27MW0031B);
- CS-18 (well 16MW0001); and
- Northwest Corner of Base Boundary (wells 4036009DC, 270, 277, 278, 279, 284, and 309).

A magenta concentration contour line is used in Figure 8 and the inset to show the extent of perchlorate greater than a 4 ppb concentration of perchlorate. This extent is based on samples from monitoring wells and samples collected during the drilling process (“profile” samples).

Demo Area 1 has a single well-defined source area and extent of contamination. The downgradient extent of the perchlorate plume has been determined with the installation of monitoring wells along the power line right-of-way east of Fredrickson Road.

The Impact Area has a single exceedance of the 4 ppb concentration of perchlorate at MW-91S.

Plumes have been identified in four areas in the J Ranges as shown on Figure 8. The J-1 Interberm perchlorate plume has several detections of greater than 4 ppb in downgradient locations MW-265, MW-286, MW-303, MW-326, MW-346, and MW-370. The J-3 Range Demolition perchlorate plume has concentrations greater than 4 ppb in several wells immediately downgradient of the source area, which is centered at MW-198, and further downgradient centered around location 90MW0054. The J-2 Range North perchlorate plume has detections greater than 4 ppb at source area locations MW-130 and MW-263, and downgradient locations MW-289, MW-293, MW-300, MW-302, MW-305, and MW-313. The J-2 East perchlorate plumes are in the process of delineation and include detections greater than 4 ppb at MW-307, MW-310 and MW-368. Perchlorate detections at the L Range are below 4 ppb and a plume is not depicted on the figure.

The Northwest Corner has a perchlorate plume extending from Canal View Road at the base boundary to the Cape Cod Canal. This area is under investigation and the plume will be updated and refined as new data is received.

The LF-1 and CS-18 areas are under investigation by AFCEE in the Superfund Program.

Rush (Non-Validated) Data

Rush data are summarized in Table 7. These data are for analyses that are performed on a fast turnaround time, typically 1 to 10 days. Explosive analyses for monitoring wells, and explosive and VOC analyses for profile samples, are typically conducted in this timeframe. Other types of analyses may be rushed depending on the proposed use of the data. The rush data have not yet been validated, but are provided as an indication of the most recent preliminary results. Table 7 summarizes only detects, and does not show samples with non-detects.

The status of the detections with respect to confirmation using Photo Diode Array (PDA) spectra is indicated in Table 7. PDA is a procedure that has been implemented for the explosive analysis, to reduce the likelihood of false positive identifications. Where the PDA status is "YES" in Table 7, the detected compound is verified as properly identified. Where the status is "NO", the identification of an explosive has been determined to be a false positive. Where the status is blank, PDA has not yet been used to evaluate the detection, or PDA is not applicable because the analyte is a VOC. Most explosive detections verified by PDA are confirmed to be present upon completion of validation.

Table 7 includes the following detections:

Demo Area 1

- Process water samples collected from the Frank Perkins Road ETR system influent (FPR-INF) and mid-fluent (FPR-MID-1) had detections of perchlorate. Process water samples collected from the influent (FPR-INF) also had detections of RDX and HMX, which were confirmed by PDA spectra.

- Process water samples collected from the Pew Road ETR system influent (PR-INF) and mid-fluent (PR-MID-1 and PR-MID-2) had detections of perchlorate. Process water samples collected from the influent (PR-INF) also had detections of RDX, which were confirmed by PDA spectra. The PR-MID-2 samples were collected prior to the second GAC exchange (first and second pair of vessels), which was conducted on August 1, 2005.

J-2 Range

- A groundwater sample from residential well RS003P had a detection of perchlorate which was similar to previous sampling rounds.

J-3 Range

- Profile samples collected from MW-392 (J3P-40) had detections of explosives and VOCs. 2-Nitrotoluene was confirmed by PDA spectra in two intervals at 159 and 189 feet below the water table (bwt), but with interference in the deeper interval. Nitrobenzene was confirmed by PDA spectra, but with interference, in one interval at 189 feet below the water table (bwt). Well screens will be set at the depth (48.5 to 58.5 ft bwt) corresponding to the particle track from the original J3P-40 proposed location between the Barrage Rocket and Hillside areas of the J-3 Range, and the depth (213.5 to 223.5 ft bwt) corresponding to the high-conductivity zone above bedrock at a similar elevation as MW-383D located cross-gradient and north of MW-392.

4. DELIVERABLES SUBMITTED

Deliverables submitted during the reporting period include the following:

Final Demo 1 Groundwater Operable Unit (OU) System Performance and Ecological Impact Monitoring (SPEIM) – 6 Month Performance Monitoring Evaluation (PME) Data Report	08/01/2005
Draft Demo 2 Groundwater Remedial Investigation (RI) Work Plan	08/02/2005
MOR and Revised Appendix B for the LTGM Plan 2005	08/03/2005
Monthly Progress Report # 100 for July 2005	08/09/2005
Draft Central Impact Area Post Screening Investigation Source Area Characterization Workplan	08/15/2005
Final J-1 Range Supplemental Geophysical Anomaly Investigation Workplan	08/16/2005
Draft Central Impact Area Targets 23 and 42 Rapid Response Action Completion of Work Report	08/18/2005
Final Demo 1 Groundwater Feasibility Study Technical Team Memorandum 01-17	08/19/2005
Interim Month Report for August 1-12, 2005	08/19/2005
Demo Area 1 Groundwater Plume Remedy Selection Plan	08/22/2005
Draft Soil Treatability Study Workplan	08/25/2005

5. SCHEDULED ACTIONS

Figure 9 provides a Gantt chart updated to reflect progress and proposed work. Figure 9 is currently under review by the USEPA and MADEP. The following documents are scheduled to be submitted in September and early October:

- Demo 1 Groundwater Draft Decision Doc/Response Summary
- L Range Groundwater Final Remedial Investigation Report
- Central Impact Area Soil and Groundwater Draft Feasibility Study Screening Report
- Western Boundary Draft Remedial Investigation Report
- Gun and Mortar Groundwater Draft Remedial Investigation Workplan

The following documents are being prepared or revised during September and early October:

- Demo 1 Soil Draft Rapid Response Action Completion of Work Report
- Demo 1 Soil Final Thermal Treatment Report
- Demo 1 Groundwater Final Rapid Response Action Completion of Work Report
- J-2 Range Soil Draft Rapid Response Action Completion of Work Report
- J-2 Range Groundwater Final Rapid Response Action Plan
- J-3 Range Soil Draft Remedial Investigation Report
- J-3 Range Soil Final Rapid Response Action Completion of Work Report
- L Range Soil Draft Remedial Investigation Report
- L Range Groundwater Draft Risk Assessment Report
- Central Impact Area Soil Draft Remedial Investigation Report
- Central Impact Area Soil Revised Draft Focused Investigation Report
- Central Impact Area Targets 23 and 42 Final Rapid Response Action Completion of Work Report
- Central Impact Area Final Post Screening Investigation Source Area Characterization Workplan
- Central Impact Area Groundwater Final Report
- Northwest Corner Draft Remedial Investigation Report
- Demo 2 Soil Final Rapid Response Action Completion of Work Report
- Gun and Mortar Soil Draft Final Contaminants of Concern Letter Report
- Gun and Mortar Soil Final GP-6 Letter Report
- Former A Range Draft Remedial Investigation Report
- Former A Range Draft Rapid Response Action Workplan
- Former K Range Draft Remedial Investigation Report
- Former K Range Draft Rapid Response Action Workplan
- Phase 2b Sites Final Remedial Investigation Report
- Ammunition Supply Point Draft Rapid Response Action Workplan
- BA-1 Training Area Soil Completion of Work Letter Report
- Final Generic Camp Edwards Wide Area Source Assessment (CEWASA) Workplan
- Small Arms Ranges Final Remedial Investigation Workplan
- Training Areas Final Data Summary Report

Profiling methods may include: Volatiles, Explosives, and Perchlorate
Groundwater methods include: Volatiles, Semivolatiles, Explosives, Pesticides, Herbicides, Metals, Perchlorate, and Wet Chemistry
Other Sample Types methods are variable
SBD = Sample Begin Depth, measured in feet bgs
SED = Sample End Depth, measured in feet bgs
BWTS = Depth below water table, start depth, measured in feet
BWTE = Depth below water table, end depth, measured in feet
AOC = Area of Concern
CIA = Central Impact Area

DATA REPORTED REFLECT CURRENT DATABASE FOR SAMPLES RECEIVED IN SPECIFIED TIMEFRAME. NOT ALL RESULTS ARE COMPLETE.
SBD = SAMPLE COLLECTION BEGIN DEPTH IN FEET BELOW GROUND SURFACE
SED = SAMPLE COLLECTION END DEPTH IN FEET BELOW GROUND SURFACE
BWTS = DEPTH BELOW WATER TABLE, START DEPTH, MEASURED IN FEET
BWTE = DEPTH BELOW WATER TABLE, END DEPTH, MEASURED IN FEET
PDA/YES = Photo Diode Array, Detect Confirmed
PDA/NO = Photo Diode Array, Detect Not Confirmed
AOC = Area of Concern
CIA = Central Impact Area
+ = Interference in sample
