

**MONTHLY PROGRESS REPORT #132
FOR MARCH 2008**

EPA REGION I ADMINISTRATIVE ORDERS SDWA 1-97-1019 and 1-2000-0014

**MASSACHUSETTS MILITARY RESERVATION
TRAINING RANGE AND IMPACT AREA**

The following summary of progress is for the period from 01 March to 28 March 2008.

1. SUMMARY OF REMEDIATION ACTIONS

The following is a description of Remediation Actions (RA) underway at Camp Edwards as of March 2008. Remediation actions may include Rapid Response Actions (RRA). An RRA is an interim action that may be conducted prior to risk assessments or remedial investigations to address a known, ongoing threat of contamination to groundwater and/or soil.

Demo Area 1 Comprehensive Groundwater RA

The Demo Area 1 Comprehensive Groundwater RA consists of the removal and treatment of contaminated groundwater to control further migration of explosives and perchlorate. Extraction, treatment, and recharge (ETR) systems at Frank Perkins Road and Pew Road include extraction wells, ex-situ treatment processes to remove explosives and perchlorate from the groundwater, and injection wells to return treated water to the aquifer.

The Pew Road ETR continues operation at a flow rate of 103 gallons per minute (gpm). As of 28 March 2008, over 39 million gallons of water have been treated and re-injected at the Pew Road ETR System.

The Frank Perkins Road ETR is operating at a flow rate of 808 gpm. As of 28 March 2008, approximately 657 million gallons of water had been treated and re-injected at the Frank Perkins Road ETR System. The RA system has treated 2039 million gallons of the 657 million gallon total.

J-1 Range South Groundwater RRA

The J-1 Range South Groundwater RRA consists of removal and treatment of contaminated groundwater to control further migration of explosives. The ETR system includes a single extraction well, ex-situ treatment process to remove explosives from the groundwater, and an infiltration trench to return treated water to the aquifer.

The ETR unit continues operation at a flow rate of 75 gpm. As of 28 March 2008, approximately 18 million gallons of water have been treated and re-injected at the ETR System.

J-2 Range North Groundwater RRA

The J-2 Range Groundwater RRA consists of removal and treatment of contaminated groundwater to control further migration of explosives and perchlorate. ETR systems include single extraction wells, ex-situ treatment processes to remove explosives and perchlorate from the groundwater, and infiltration basins to return treated water to the aquifer.

The mobile ETR units continue operation at a flow rate of 250 gpm and the building ETR continues operation at a flow rate of 125 gpm. As of 28 March 2008, approximately 200 million

gallons of water have been treated and re-injected at the mobile ETR System and 99 million gallons of water have been treated and re-injected at the building ETR System.

J-3 Range Groundwater RRA

The J-3 Range Groundwater RRA consists of removal and treatment of contaminated groundwater to control further migration of explosives and perchlorate. ETR systems include single extraction wells, ex-situ treatment processes to remove explosives and perchlorate from the groundwater and use of the existing Fuel Spill-12 (FS-12) infiltration gallery to return treated water to the aquifer.

The ETR continues operation at a reduced flow rate of 118 gpm. A power outage the week of 14 March 2008 impacted communication lines for two wells on Camp Good News. A technician has been scheduled to troubleshoot and restore communications. The flow rate will be reset to 195 gpm once communication has been restored. As of 28 March 2008, approximately 129 million gallons of water have been treated and re-injected at the ETR System.

2. SUMMARY OF ACTIONS TAKEN

Drilling progress for the month of March is summarized in Table 1.

Table 1
Drilling progress as of 28 March 2008

Boring Number	Purpose of Boring/Well	Total Depth (ft bgs)	Depth to Water Table (ft bgs)	Completed Well Screens (ft bgs)
No new wells were installed during the month of March.				
ft bgs = ft below ground surface				

Samples collected during the reporting period are summarized in Table 2.

Performance monitoring groundwater samples were collected from 15 locations at the J-2 North Range. Process water samples were collected at Frank Perkins Road, Pew Road, J-2 North Range, J-3 Range and J-1 South Range treatment plants.

The spring 2008 long term monitoring program began in March; groundwater samples were collected from L Range, Demo 2 and Western Boundary study areas.

Multi incremental soil samples were collected at 2 engineering dog detection (EDD) locations in the J-2 Range extension study areas. Soil samples were also collected from various locations associated with the field investigations at the J-2 North discrimination targets.

There were 8 BIP items discovered during the field investigations at the J-2 North discrimination targets. Two 60mm, four 80mm, and one 105mm projectiles were detonated on 12 March 2008. One 3.5 inch rocket was detonated on 24 March 2008. Pre- and post-BIP samples were collected from all eight locations in accordance with the BIP sampling protocol.

The J-2 Range extension field investigation continued at various target grids. Table 3 presents the Discrimination Target Grid summary sheet for the period ending 28 March 2008.

The following are notes from the 13 March 2008 Technical Team Meeting of the Impact Area Groundwater Study Program office at Camp Edwards:

Please note that Action Items/Requests are highlighted in bold, italicized type.

Demo 1 Groundwater Monitoring Review – Paul Nixon

(Paul Nixon (IAGWSP) will Email this presentation to the regulatory agencies).

(Lynne Jennings (EPA) requested regulatory agencies receive a copy of future tech meeting presentations one day prior to the presentation). The presentation reviewed the semi-annual groundwater results of the Demo 1 (April 2007 through December 2007) sampling round of 101 monitoring wells for perchlorate (using Method 314.0) and 75 monitoring wells for explosives (using Method 8330); the trends of the source area over time; update of ETR influent and concentrations; treatment plant performance update; and recommendations.

Mr. Nixon displayed the perchlorate and RDX plume maps as drawn in April 2007. Details of perchlorate, RDX, and HMX concentrations from September 1997 through April 2007 at monitoring wells MW-19S and MW-31S were discussed.

Perchlorate - Monitoring well results of the 101 wells sampled for perchlorate – 31 had detects. In April 2007, MW-210 (located at the intersection of Frank Perkins and Pew Road) had the highest concentration at 243 ppb; in December 2007 that concentration had reduced to 135 ppb. Twenty out of 75 wells had RDX detects since April 2007.

Influent contamination concentrations at the Pew Road System RA for RDX and perchlorate from June 2007 to December 2007 showed a slight decrease in perchlorate concentration and RDX concentration was consistent. That system has been pumping for approximately three and one-half years.

Frank Perkins Road Treatment Facility RA May 2007 through December 2007: Start up data pumping was approximately 330 gpm during the RRA period.

Demo 1 Treatment System Summary – Pew Road has been operating since 2004 and has done very well, with 94.3% availability. There were 27.3 million gallons treated during the RA (since June 2007) at a flow rate of 100 gpm. During this period 2.41 lbs of perchlorate and 21 lbs of RDX was removed.

Frank Perkins Road RA start-up occurred on 06/25/2007; full design flow of 808 gpm was reached in November 2007. The system continues to operate fine at 95.4% availability. Treated 112.5 million gallons since June and removals were almost 11 lbs of perchlorate; 7.5 lbs of RDX; 1.25 lbs of HMX.

Recommendations:

- No changes to the plume boundary recommended
- Continue operating both ETR systems at full flow rate
- Continue to evaluate system performance with data collected under ESPM Program
- Investigate perchlorate contamination near and down gradient of MW-352 using drive points

Investigating perchlorate contamination down gradient of MW-352 in the toe area - Mr. Nixon is presently working on a project note describing drive point sampling to further define the toe of plume and the PN will be distributed to the regulatory agencies next week.

DP1-30, 31, and 32: Ms. Jennings noted that the language in the MOR states wells will be installed based on any detection at MW-352 or MW-353. The decision document doesn't state exactly when those wells will be installed; but identifies them as an integral part of the monitoring system. EPA stated the location of the wells needs to be determined. Mr. Nixon noted that critical data needs to determine the position of the well screens. The first step is to install the drive point to determine if something significant is detected. Mr. Gregson added that it is important to determine whether or not there is perchlorate downgradient of the pond. Complex groundwater flow beneath the pond makes it difficult to rely only on modeling to decide on well screen depth. We do not want to install permanent wells with screens at the wrong depths. The 2ppb perchlorate contour should still be well upgradient based on our current mapping. The IAGWSP will prepare a project note to provide details on the proposed drive point program.

EPA does not agree with performing drive point sampling every few years. EPA and MassDEP want to ensure the permanent wells are installed.

Ms. Jennings requested the project note state the history of detections both in plan view and in cross section for each of the wells 252, 248, 258 and 231.

Northwest Corner Feasibility Study (FS)

EPA's initial review of the Northwest Corner FS identified an issue they have with the two active treatment alternatives. EPA observed that modeling was not conducted for these two alternatives and does not think there was sufficient information presented in the report to screen them out. Bill Gallagher (IAGWSP) noted that the IAGWSP discussed with the agencies in tech meetings in May and July of 2007 which alternatives should be modeled. In those meetings IAGWSP showed the model run prepared for the No Action/Monitoring scenario which met the requirements of the AO to evaluate an alternative that remediates the plume to below risk-based standards within ten years. There were discussions of whether or not these treatment scenarios should be actively modeled and the general consensus was that it was unnecessary. In the 7/26/07 tech meeting notes EPA indicated general agreement with this approach but wanted to see cross-sections showing the plume migrations through time. These cross sections were prepared and presented. IAGWSP did a qualitative evaluation to determine how many wells would be needed and how quickly they would achieve cleanup; and it wasn't dramatically different than the no active treatment scenarios. ***EPA did not believe the active treatment scenarios should be screened out and may request a more quantitative evaluation with more detailed analysis of these alternatives. EPA will address this issue in their comments to IAGWSP.***

Southeast Ranges Update – Dave Hill

- J-2 Extension Soil Update – Dave Hill**

- EDD sampling is complete at all scoped locations, waiting for analyticals. A table with the current status of detections at the EDD locations was handed out. The field crew is working on sub-surface anomaly #1 and have found a couple of 60mm mortars (inert w/suspect fuses), a couple of 81mm mortars (inert w/suspect fuses), and suspect fuses in the support area (grids M44, M45 area) that was cleared in preparation for intrusive activity. There were also 21 30mm projectiles (unknown filler w/suspect fuses) found in a scattered fashion throughout the support area.

- **Soil Data Table** – 100 point composite samples were collected at grids M43, M44, N43, and N44. Some HMX was detected in those samples. Samples were collected beneath the broken 105 and there were detections. A 100 point composite sample in grid 41 was ND.
- **J-2 East Construction Update– Dave Hill**
Currently doing grain size boring at EW-6. EW-4 is complete; monitoring wells have been installed according to the SPM Plan; an extraction well will be installed per the SPM Plan. EW-6 soil profile boring is in progress. Effluent piping runs have been installed to the west and east.
- **J-3 Soil Sampling Project Note – Dave Hill**
IAGWSP proposed soil sampling in the recently excavated concrete debris area (excavated by Textron), the Ricochet Trough Area and Barrage Rocket Area. ***There was discussion based on IAGWSP proposing 5 point sampling vs. EPA requesting a multi-increment approach. EPA requested IAGWSP remove this from the project note and prepare a proposal based on the size of the decision unit. This will be discussed further in a scoping session.***
- **EDD Report Update – Scope and Delivery Date – Ben Gregson**
For the EDD Report, it was agreed that IAGWSP will provide a tech memo of the findings from the first round of sampling and excavation, including a discussion of the standardization area, to the regulatory agencies in three weeks. The second tech memo will include the findings from the second round of sampling and excavation plus recommendations. The second tech memo will be provided in approximately two months.
- **Other**
 - J-1 South Information Animations – EPA is concerned about the plume migration off-base and wants to know when alternatives being considered for the FS can be presented. (The draft RI/FS is due January 2009; the final is due May 2009). ***EPA requested IAGWSP present an interim briefing on modeling for the various alternatives scoped in the FS, before the FS is delivered to the regulatory agencies. IAGWSP agreed.***

CIA FSSR – Review and Discussion of EPA Comments – Bill Gallagher

After reviewing EPA's comments on the CIA FSSR, IAGWSP noted most issues were focused on costing and requested more explanation on some EPA comments. The IAGWSP proposed not to finalize the screening report. IAGWSP feels that the RCL and MOR can stand as the final administrative record for the report and agreed upon changes will be incorporated in the FS. The EPA was in general agreement with this approach but wants to ensure that the record reflects the basis for the next steps.

In response to General Comment #1, Mr. Gallagher suggested the RCL state alternatives to be carried forward into the FS be agreed to during a series of scoping meetings. To preserve a range of alternatives, EPA requested keeping alternative 6 (what IAGWSP called alternative 7); keeping alternatives 1 and 2; and EPA does not object to discussing a scope between alternatives 3 and 6.

MassDEP will inform IAGWSP today on when to expect DEP's comments.

Peter Dillon of TetraTech was introduced. He will be working on the FS doing modeling and tech support.

Source Investigation Report – Carol Keating (EPA)

Ms. Keating noted that in the discussion on the migration groundwater pathway in the Source Investigation Report, the list of COPC's presented is inconsistent. Mr. Gallagher responded that the number of detections, compounds and metals detected made this extremely difficult. Mr. Gallagher discussed this with EPA's risk assessment personnel (Sarah Levinson) to provide a basis for screening that is not the same as was presented in the HHRA. Ms. Jennings noted that Ms. Keating role is to support the regulatory agencies on all risk assessment issues, anything involved with leaching/modeling for all operable units for consistency and should be involved in these issues. Ms. Levinson's focus is more on hard core risk assessment data.

GP-2 Site Closeout Discussion – Ben Gregson

Mr. Gregson (IAGWSP) questioned if a CERCLA risk assessment on all detections will need to be done, or if this can be streamlined. There are 37 gun positions, and a CERCLA risk assessment takes approximately four months.

IAGWSP agreed to review leaching pathway for the exceeded SSLs that EPA identified and to review if any compounds of concern exist in groundwater

EPA proposes a conventional CERCLA risk assessment for groundwater if the modeling indicates it leads to the groundwater. For GP-2 there were no detections in the well and modeling should indicate it will not go to groundwater.

IAGWSP proposed to conduct an MCP Method 1 Risk Assessment for the remaining exposure pathways. MassDEP agrees with method 1 risk assessment so long as it is consistent with the MCP.

Tungsten Schedule – Ben Gregson

The interim data report will be issued to the regulatory agencies on April 3, and the scoping meeting will be held at the April 10 tech meting.

Old B&D Project Note – Ben Gregson

Will be distributed next week.

Diffusion Sampling: Ben Gregson

Dennis Leblanc will attend a future tech meeting to discuss the results of a diffusion sampling experiment done in 2006.

IART – Lynne Jennings

A press release was issued for new members for the IART and a list of responses will be compiled. A plan will be necessary to determine how to get the new members up-to-speed.

Agenda Topics for Meetings on 3/20 and 3/27 – Ben

Thursday, March 27 (meeting will begin at 10:00)

10:00 AM Scoping UXO sites (i.e. U Range, KD Range, E Range) that are not currently in an OU but have had some level of investigation. **Bill Gallagher will summarize the detail on the status of each site.**

11:00 L Range Implementation/Robotics (**the presentation to be distributed to the regulatory agencies on Wednesday, March 29**).

12:00 Alternative Munitions Management Approach
1:00 PM SARWG - IAGWSP will give an update on the nitroglycerine study including CRM on Sue Taylor's proposal and review the K Range data.

Thursday, March 27

9:00 AM CIA Plume Review/Monitoring Review
1:00 PM UXO Working Group Meeting

IART Meeting for MARCH 2008

There was no meeting of the Impact Area Groundwater Review Team (IART) held in MARCH 2008.

3. SUMMARY OF DATA RECEIVED

Table 4 (sorted by analyte) summarizes the detections, since 1997, that equaled or exceeded an EPA Maximum Contaminant Level (MCL), MassDEP MCL (MMCL) or Health Advisory (HA) for drinking water. Table 4 is updated on a monthly basis; discussions in the text are updated on the same schedule as Figures 1 through 8, which are discussed later in this section.

Table 5 summarizes the validated detections of explosives and perchlorate for all groundwater results received from 01 March through 31 March 2008. These results are compared to the MCL/HA values for respective analytes. First-time validated detections of Volatile Organic Compounds (VOC), Semi-Volatile Organic Compounds (SVOC), metals, herbicides and pesticides are included and discussed quarterly in the March, June, September, and December Monthly Progress Reports. Metals, chloroform, and bis (2-ethylhexyl) phthalate (BEHP) are excluded from Table 5 for the following reasons: metals are a natural component of groundwater, particularly at levels below MCLs or HAs; detections of chloroform are pervasive throughout Cape Cod and are not likely the result of military training activities; and BEHP is believed to be largely an artifact of the investigation methods and may be introduced to the samples during collection or analysis.

Figures 1 through 8 depict the cumulative results of groundwater analyses for the period from the start of the Impact Area Groundwater Study (July 1997) to the present. There are no new groundwater data to report for metals, VOC, SVOC, pesticides or herbicides. Figures 1 and 8 have been updated and are included in this report. The most recent figures for metals, VOC, SVOC, pesticides and herbicides have also been included in this quarterly report. Each figure depicts results for a different analyte class:

- Figure 1 shows the results of explosive analyses by EPA Method 8330. This figure is updated and included each month.
- Figure 2 shows the results of inorganic analyses (collectively referred to as "metals", though some analytes are not true metals) by methods E200.8, 300.0, 350.2M, 353M, 365.2, CYAN, IM40MB, IM40MBM, and IM40HG. This figure is included quarterly in the March, June, September, and December Monthly Progress Reports.
- Figure 3 shows the results of VOC analyses by methods OC21V, OC21VM, 504, 8021W, and SW8260 exclusive of chloroform detections. This figure is included quarterly in the March, June, September, and December Monthly Progress Reports.
- Figure 4 shows the chloroform results using the VOC analyses by method OC21V and OC21VM. This figure is updated and included semi-annually in the June and December Monthly Progress Reports.

- Figure 5 shows the results of SVOC analyses by methods OC21B and SW8270, exclusive of detections of BEHP. This figure is included quarterly in the March, June, September, and December Monthly Progress Reports.
- Figure 6 shows the BEHP results using the SVOC analyses by methods OC21B and SW8270. This figure is updated and included semi-annually in the June and December Monthly Progress Reports.
- Figure 7 shows the results of Pesticide (method OL21P) and Herbicide (method 8151) analyses. This figure is included quarterly in the March, June, September, and December Monthly Progress Reports.
- Figure 8 shows the results of Perchlorate analysis by method E314.0. This figure is updated and included each month.

The concentrations from these analyses are depicted in Figures 1 through 7 compared to Maximum Contaminant Levels (MCLs) or Health Advisories (HAs) published by EPA for drinking water. The color coded legends are defined on each figure.

There are multiple labels listed for some wells in Figures 1 through 8, which indicate multiple well screens at different depths throughout the aquifer. The aquifer is approximately 200 to 300 feet thick in the study area. Well screens are positioned throughout this thickness based on various factors, including the results of groundwater profile samples, the geology, and projected locations of contaminants estimated by groundwater modeling. The screen labels are colored to indicate which of the depths had the chemical detected above drinking water standards. Generally, groundwater entering the top of the aquifer will move deeper into the aquifer as it moves radially outward from the top of the water table mound. Light blue dashed lines in Figures 1 through 8 depict water table contours. Groundwater generally moves perpendicular to these contours, starting at the center of the 70-foot contour (the top of the mound) and moving radially outward. The rate of vertical groundwater flow deeper into the aquifer slows as groundwater moves away from the mound.

The results presented in Figures 1 through 8 are cumulative, which provides a historical perspective on the data rather than a depiction of current conditions. Any detection at a well that equals or exceeds the MCL/DWEL/HA results in the well having a red symbol, regardless of later detections at lower concentrations, or later non-detects. The difference between historical and current conditions varies according to the type of analytes. There are little or no differences between historical and current exceedances of drinking water criteria for Explosives, Perchlorate, VOCs, Pesticides, and Herbicides; the minor differences are mentioned in the following paragraphs. There are significant differences between historical and current exceedances of drinking water criteria for Metals and SVOCs, as described further below.

Figure 1: Explosives in Groundwater Compared to MCLs/HAs

There are no new first-time validated detections of explosives for groundwater data received in March 2008.

Exceedances of drinking water criteria for explosive compounds are indicated in seven general areas:

- Demo Area 1 (wells 19, 31, 34, 73, 76, 77, 114, 129, 139, 165, 210, and 211);
- Demo Area 2 (wells 16, 160, 259, 262, and 404);
- Former A Range (well 206);

- The Impact Area and CS-19 (wells 58MW0001, 58MW0002, 58MW0009E, 58MW0011D, 58MW0016B, 58MW0016C, 58MW0018B; and wells 1, 2, 23, 25, 37, 38, 40, 43, 85, 86, 87, 88, 89, 90, 91, 93, 95, 98, 99, 100, 101, 102, 105, 107, 111, 112, 113, 176, 178, 184, 201, 203, 204, 207, 209, 212, 223, 235, OW-1, OW-2, and OW-6);
- J Ranges and southeast of the J Ranges (wells 45, 58, 130, 132, 147, 153, 163, 164, 166, 171, 191, 193, 196, 198, 215, 218, 227, 232, 234, 247, 265, 289, 303, 306, 324, 326, 343, 360, 368, 369, 398, 477, 481, 485, 486, 487, and wells 90MW0022, 90MW0041, 90MW0054 and 90WT0013); and
- Northwest Corner of Base Boundary (well 323).

Exceedances of drinking water criteria were measured for TNT at Demo Area 1 (MW-19S, MW-31S, MW-31M, and MW-31D) and Southeast of the Ranges (MW-196S). Exceedances of the HA for RDX were noted at all of the locations listed above except at MW-45. Exceedances of drinking water criteria were measured for 2,6-dinitrotoluene (2,6-DNT) at MW-45S.

Demo Area 1 has a single well-defined source area and extent of contamination. The estimated extent of RDX exceeding the HA at Demo Area 1 based on the most recent groundwater measurements is indicated by a magenta concentration contour line on Figure 1 and Inset A.

Demo Area 2 has had five groundwater exceedances of the RDX HA at MW-16S, MW-160S, MW-259, MW-262M1, and MW-404M2. The extent of the contamination is currently under investigation.

The Former A Range has had exceedances of the RDX HA at MW-206M1. The S screen in this location is non-detect for all explosives.

The Impact Area has a plume defined by RDX concentrations above the HA of 2 ppb. The plume originates primarily along Turpentine Road and extends downgradient to the west-northwest. Another source of RDX in the Impact Area is CS-19. Portions of CS-19 are currently under investigation by the Air Force Center for Environmental Excellence (AFCEE) under the Superfund program. The extent of RDX has largely been defined in the Impact Area and the investigation phase of the project is nearing completion.

The J Ranges and downgradient areas have five groundwater plumes defined by concentrations of RDX above the HA of 2 ppb. The five plumes originate at the J-1 Range Interberm Area (northern plume in the vicinity of MW-58 and MW-265), the J-2 Range North plume (northern plume extending from MW-130), the J-2 Range East plume (eastern plume including MW-215), the J-3 Range Demolition Area (southern plume extending from MW-163 south to Snake Pond) and the L Range (in an area defined by MW-147 and MW-153 at Greenway Road). In addition, RDX detections at MW-398M2 suggest a possible plume at the south end of the J-1 Range. All the J ranges and the L Range are currently under investigation and the plumes will be updated and refined as new validated data is received.

The Northwest Corner of the base boundary has one validated detection of RDX in groundwater above the HA of 2 ppb at MW-323M2. The M1 screen in this location has a validated detection of RDX in groundwater below 2 ppb.

Figure 2: Metals in Groundwater Compared to MCLs/HAs

Exceedances of drinking water criteria for metals are scattered throughout the study area. Where two or more rounds of sampling data are available, the exceedances generally have not

been replicated in consecutive sampling rounds. The exceedances have been measured for antimony, arsenic, cadmium, chromium, lead, molybdenum, sodium, thallium and zinc. Exceedances of the arsenic drinking water criteria were repeated at three (wells 58MW0010A, MW-7M1 and MW-45S) of the six locations with arsenic exceedances. At the remaining three locations (wells MW-3D, MW-52M2 and MW-152M1), arsenic exceedances were not repeated in subsequent results. Cadmium (well MW-52M3) and chromium (well MW-7M1) were each detected above drinking water criteria in a single sampling round in August-September 1999. Exceedances of the drinking water criteria for lead were repeated at two of four locations (wells ASP and MW-45S). At the remaining two locations (wells MW-2S and MW-7M1) lead exceedances were not repeated in subsequent results. Exceedances of the drinking water criteria for molybdenum were repeated at two of eight locations (wells MW-53M1 and MW-54S) with molybdenum exceedances. All of the molybdenum exceedances were observed in year 1998 and 1999 results. Exceedances of the drinking water criteria for sodium were repeated at 12 of the 21 locations with sodium exceedances (wells MW-2S, MW-21S, MW-46S, MW-57M3, MW-57M2, MW-57M1, MW-144S, MW-145S, MW-148S, MW-187D, ASP and SDW261160). Seven wells (MW-21S, MW-57M1, MW-57M3, MW-187D, BHW215083B, BHW215083D and ASP) had sodium exceedances in year 2004, 2005, and/or 2006 results. Zinc exceeded the HA in seven wells, all of which are constructed of galvanized (zinc-coated) steel.

There have been few exceedances of drinking water limits for antimony and thallium since the introduction of the ICP/GFAA and ICP/MS methods, discussed in the next paragraph. Antimony levels exceeding drinking water criteria were detected in samples from 13 locations; these levels were not detected in subsequent sampling rounds. Only two antimony exceedances (wells MW-38M2 and MW-73S) were measured since January 2003. Twelve of the 71 locations with thallium exceedances had repeated exceedances in subsequent sampling rounds (wells MW-7M1, MW-7M2, MW-19S, MW-45S, MW-47M2, MW-47M3, MW-52S, MW-52D, MW-54S, MW-54M1, MW-58S and MW-94M2). There have been no exceedances of thallium since January 2003.

Groundwater samples sent for metals analysis are analyzed for most metals by Inductively Coupled Plasma (ICP) in accordance with U.S. EPA Contract Laboratory Program Statement of Work ILM04.0. In May of 2001, the IAGWSP began analyzing for antimony and thallium using the GFAA (graphite furnace atomic adsorption) method in accordance with EPA Drinking Water Methods 204.2 (antimony) and 279.2 (thallium) in order to achieve lower detection limits for these metals. Both the ILM04.0 and GFAA methods are subject to false positive results at trace levels due to interferences. As a result, the IAGWSP changed to a new method to achieve lower detection limits for antimony and thallium in January of 2003. Groundwater samples are now analyzed for antimony and thallium by Inductively Coupled Plasma/Mass Spectroscopy (ICP/MS) in accordance with the EPA Method 6020. The ICP/MS Method 6020 has greater sensitivity and the added feature of selectivity for antimony and thallium. These additional methods achieve lower detection limits for these two metals and reduce the number of false positive results.

The distribution and lack of repeatability of the metals exceedances is not consistent with a contaminant source, nor do the detections appear to be correlated with the presence of explosives or other organic compounds. The IAGWSP evaluated inorganic background concentrations using the groundwater quality database of 1999, and submitted a draft report describing background groundwater quality in December 1999.

Figure 3: VOCs in Groundwater Compared to MCLs/HAs

Exceedances of drinking water criteria for VOCs are indicated in six general areas: Northeast Corner (well LRMW003), Impact Area boundary (MW-28S), CS-10 (wells 03MW0007A, 03MW0014A, and 03MW0020), FS-12 (wells MW-45S, 90MW0003, and ECMWSNP02D), and in the J-1 Range (well MW-187D). CS-10, LF-1 and FS-12 are sites located near the southern extent of the Training Ranges that are currently under investigation by AFCEE under the Superfund program. Exceedances of drinking water criteria were measured for tetrachloroethylene (PCE) at CS-10, for vinyl chloride at LF-1, and for methylene chloride, toluene, 1,2-dichloroethane, and ethylene dibromide (EDB) at FS-12. These compounds are believed to be associated with the sites under investigation by AFCEE. Detections of benzene, tert-butyl methyl ether, and chloromethane at J-1 Range well MW-187D, chloromethane at Northeast Corner well LRMW003, and 1,2-dibromo-3-chloropropane at Impact Area boundary well MW-28S are currently under investigation.

Figure 4: Chloroform in Groundwater Compared to MCLs

Chloroform has been widely detected in groundwater across the Upper Cape as stated in a joint press release from USEPA, MassDEP, IRP, and the Joint Programs Office. The Cape Cod Commission (2001) in their review of public water supply wells for 1999 found greater than 75% contained chloroform with an average concentration of 4.7 ug/L. The IRP has concluded chloroform is not the result of Air Force activities. A detailed discussion of the presence of chloroform is provided in the Final Central Impact Area Groundwater Report (06/01).

Figure 5: SVOCs in Groundwater Compared to MCLs/HAs

Exceedances of drinking water criteria for SVOCs are scattered throughout the study area. All exceedances of drinking water criteria for SVOCs were measured for bis (2-ethylhexyl) phthalate (BEHP), with the exception of two wells. MW-264M1 (J-3 Range) had a detection of benzo(a)pyrene at concentrations of more than twice the HA and MW-241M1 (L Range) had detections of naphthalene above the HA of 100 ppb. Detections of BEHP are presented separately in Figure 6 and discussed in the next paragraph.

Figure 6: BEHP in Groundwater Compared to MCLs

Exceedances of drinking water criteria for bis (2-ethylhexyl) phthalate (BEHP) are scattered throughout the study area. BEHP is believed to be largely an artifact of the investigation methods and may be introduced to the samples during collection or analysis. However, the potential that some of the detections of BEHP are the result of activities conducted at MMR has not been ruled out.

A detailed discussion of the presence of BEHP is provided in the Draft Completion of Work Report (7/98) and subsequent responses to comments. The theory that BEHP mostly occurs as an artifact, and is not really present in the aquifer, is supported by the results of subsequent sampling rounds that show much lower levels of the chemical after additional precautions were taken to prevent cross-contamination during sample collection and analysis. Only four locations (out of 93) showed BEHP exceedances in consecutive sampling rounds: 28MW0106 (located near SD-5, a site under investigation by AFCEE), 58MW0006E (located at CS-19), 90WT0013 (located at FS-12), and MW-146M1 (located at L Range). Subsequent sampling rounds at all these locations have had results below the MCL. Eleven wells (27MW0705, 27MW2061, C2-B, C6-C, C7-B, MW-47M2, MW-164M1, MW-168M1, MW-188M1, MW-196M1, and MW-198M1)

had BEHP exceedances in the year 2002 and 2003 results. There have been no exceedances of BEHP in 2004, one exceedance of BEHP, at MW-356M1 (J-3 Range), in 2005, and one exceedance of BEHP, at MW-477M2 (J-1 Range), in 2007.

Figure 7: Herbicides and Pesticides in Groundwater Compared to MCLs/HAs

There has been one exceedance of drinking water criteria for pesticides, at well PPAWSMW-1. A contractor to the United States Air Force installed this monitoring well at the PAVE PAWS radar station in accordance with the Massachusetts Contingency Plan (MCP), in order to evaluate contamination from a fuel spill. The exceedance was for the pesticide dieldrin in a sample collected in June 1999. This well was sampled again in November 1999. The results of the November sample indicate no detectable pesticides although hydrocarbon interference was noted. It appears from the November sample that pesticides identified in the June sample were false positives.

There has been one exceedance of drinking water criteria for herbicides, at well MW-41M1 (Impact Area). This response well was installed downgradient of the Impact Area. The exceedance was for the herbicide pentachlorophenol in a sample collected in May 2000. There were no detections above the MCL of this compound in the three previous sampling rounds in 1999, nor in the subsequent sampling rounds in 2000, 2001, 2002, and 2003.

Figure 8: Perchlorate in Groundwater Compared to a 2 ppb Concentration

There are no new first-time validated detections of perchlorate for groundwater data received in March 2008.

Sampling and analysis of groundwater for perchlorate was initiated at the end of the year 2000 as part of the IAGWSP. Cumulative exceedances of the 2 ppb concentration of perchlorate are indicated in seven general areas:

- Demo Area 1 (wells 19, 31, 32, 33, 34, 35, 36, 73, 75, 76, 77, 78, 114, 129, 139, 162, 165, 172, 210, 211, 225, 255, 258 and 341);
- Impact Area and CS-19 (wells 58MW0009C, 58MW0015; and wells 38, 89, 91, 93, 101, and OW-1);
- J Ranges and southeast of the J Ranges (wells 93, 125, 127, 128, 130, 132, 142, 143, 158, 163, 166, 193, 197, 198, 215, 232, 234, 237, 243, 247, 250, 263, 265, 286, 289, 293, 295, 300, 302, 303, 305, 307, 310, 313, 319, 321, 324, 326, 329, 335, 339, 343, 346, 348, 366, 368, 370, 393, and wells 90PZ0211, 90MW0022 and 90MW0054, 90WT0013, J2EW3-MW-2-B, and RS003P);
- Northwest Corner of Base Boundary (wells 4036009DC, 66, 270, 277, 278, 279, 283, 284, 287, 297, 301, 309, 323, and RSN0W3); and
- Western Boundary (wells 80, 233, and 267).

Demo Area 1 has a single well-defined source area and extent of contamination. The downgradient extent of the perchlorate plume has been determined with the installation of monitoring wells along the power line right-of-way east of Fredrickson Road.

The Impact Area has eight locations with exceedances of the 2 ppb concentration of perchlorate. The perchlorate plume extends from near the center of the Impact Area to the northwest, in the vicinity of Burgoyne Road.

Plumes have been identified in four areas in the J Ranges. The J-1 Interberm perchlorate plume has several perchlorate detections in downgradient locations MW-265, MW-286, MW-303, MW-326, MW-346, and MW-370. The J-3 Range Demolition perchlorate plume has detections in several wells immediately downgradient of the source area, which is centered at MW-198, and further downgradient centered near location 90MW0054. The J-2 Range North perchlorate plume has detections at source area locations MW-130 and MW-263, and downgradient locations MW-289, MW-293, MW-300, MW-302, MW-305, and MW-313. The J-2 East perchlorate plumes are in the process of delineation and include detections at MW-307, MW-310 and MW-368. There is a single perchlorate detection (well 90WT0013) at the L Range which exceeds the 2 ppb concentration.

The Northwest Corner has a perchlorate plume extending from Canal View Road at the base boundary to the Cape Cod Canal. This area is under investigation and the plume will be updated and refined as new data is received.

The Western Boundary has three locations (wells 80, 233, and 267), which exceed the 2 ppb perchlorate MMCL.

4. DELIVERABLES SUBMITTED

Deliverables submitted during the reporting period include the following:

Monthly Progress Report No. 131 for February 2008 03/10/2008

5. SCHEDULED ACTIONS

Figure 9 provides a Gantt chart updated as of 02 February 2008, to reflect progress and proposed work.

The following documents are scheduled to be submitted in April 2008:

- Response to EPA comments on MOR II on the Draft L Range Groundwater HHRA, dated 5/15/06
 - J-2 North Annual System Performance Monitoring (SPM) Report

The following documents are being prepared or revised during April:

- J-1 Range South Soil/Groundwater Final Remedial Investigation/Feasibility Study Report
 - J-2 Range Groundwater Interim Remedial Investigation/Feasibility Study Report
 - J-3 Range Groundwater Interim Remedial Investigation/Feasibility Study Report
 - L Range South Soil/Groundwater Draft Remedial Investigation/Feasibility Study Report

TABLE 3
Discrimination Target Grid Summary Table
1 March 2008 - 28 March 2008

Grid/ Location	Date Updated	Number of Excavations	Items	MEC CDC	MEC BIP	MD (lbs)	RRD (lbs)
J-2 Range Grid M44, M45, N44 (support areas)	03/11/08	102	Various MD fragments			148.5	
			81mm Mortar, M374 (inert filler, suspect fuze)		2		
			60mm Mortar, M720 (unknown filler, suspect fuze)		2		
			M527 Point Detonating Fuze, presumed live	2			
			30mm Projectiles (unfuzed, unknown filler)	21			
			Assorted RRD			10.85	
J-2 Range Grid M-44 (Discrim Target #1)	03/21/08	1	Various MD fragments			2106	
			Assorted RRD				270
			105mm Projectile, M1 (fuzed, unknown filler)		1		
			Fuze, Time, Powder Train	9			
J-2 Range Grid M-41 (Discrim Target #3)	03/28/08	1	Various MD fragments			132	
			Assorted RRD				573
			30mm Projectile, cracked open, unknown filler, unfuzed	1			
			30mm Projectile, unknown filler, suspect fuze	6			
J-2 Range Grid M-44 (Discrim Target #6)	3/21/2008	1	Various MD fragments			42	
			Assorted RRD				200
J-2 Range Grid L-44 (Discrim Target #8)	3/28/2008	1	30mm Projectiles (suspect fuze, unknown filler)	1			
			Various MD fragments			47	
			Assorted RRD				30
J-2 Range Grid M-44/45 (Discrim Target #10)	3/21/2008	1	30mm Projectiles (unfuzed, unknown filler)	5			
			Various MD fragments			85	
			Assorted RRD				48
J-2 Range Grid L-44 (Discrim Target #15)	3/28/2008	1	60mm Mortar, M720 (suspect fuze, unknown filler)		1		
			Various MD fragments			85	
			Assorted RRD				5.5
J-2 Range Grid M-45 (Discrim Target #19)	03/28/08	1	Various MD fragments			137	
			Assorted RRD				1
Total		109		45	6	2782.5	1138.35

MEC = Munitions and Explosives of Concern

CDC = Controlled Detonation Chamber

BIP = Blown in Place

MD = Munitions Debris

RRD = Range Residue Debris
