

**MONTHLY PROGRESS REPORT #148
FOR JULY 2009**

EPA REGION I ADMINISTRATIVE ORDERS SDWA 1-97-1019 and 1-2000-0014

**MASSACHUSETTS MILITARY RESERVATION
TRAINING RANGE AND IMPACT AREA**

The following summary of progress is for the period from 01 July to 31 July 2009.

1. SUMMARY OF REMEDIATION ACTIONS

The following is a description of Remediation Actions (RA) underway at Camp Edwards as of July 2009. Remediation actions may include Rapid Response Actions (RRA). An RRA is an interim action that July be conducted prior to risk assessments or remedial investigations to address a known, ongoing threat of contamination to groundwater and/or soil.

Demo Area 1 Comprehensive Groundwater RA

The Demo Area 1 Comprehensive Groundwater RA consists of the removal and treatment of contaminated groundwater to control further migration of explosives and perchlorate. Extraction, treatment, and recharge (ETR) systems at Frank Perkins Road and Pew Road include extraction wells, ex-situ treatment processes to remove explosives and perchlorate from the groundwater, and injection wells to return treated water to the aquifer.

The Pew Road System continues to operate at a flow rate of 103 GPM with over 111 million gallons of water treated and re-injected. The Pew Road System shutdown at 1137 h on 30 July 2009 due to a power interruption. There were no alarms of VFD faults noted at the system. The system was restarted at 1834 h resulting in a downtime of 6.95 h.

Frank Perkins Road Treatment Facility continues to operate at a flow rate of 808 GPM with over 732 million gallons of water have been treated and re-injected.

J-1 Range South Groundwater RRA

The J-1 Range South Groundwater RRA consists of removal and treatment of contaminated groundwater to control further migration of explosives. The ETR system includes a single extraction well, ex-situ treatment process to remove explosives from the groundwater, and an infiltration trench to return treated water to the aquifer.

The J-1 Range South System continues to operate at a flow rate of 75 GPM with over 68 million gallons of water treated and re-injected. The J-1 Range South System was shutdown at 1129 h on 20 July 2009 to decant the backwash tank through the system. Decant was completed and the system was restarted at 1209 h resulting in a downtime of 0.67 h. The J-1 Range South System shutdown at 1147 h on 30 July 2009 due to a power interruption. The system was restarted at 1751 h 30 July 2009 resulting in a downtime of 6.07 h.

J-2 Range North Groundwater RRA

The J-2 Range North Groundwater RRA consists of removal and treatment of contaminated groundwater to control further migration of explosives and perchlorate. ETR systems include single extraction wells, ex-situ treatment processes to remove explosives and perchlorate from the groundwater, and infiltration basins to return treated water to the aquifer.

The J-2 Range North Treatment Building continues to operate at a flow rate of 125 GPM with over 186 million gallons of water treated and re-injected. The J-2 North System shut down at 1747 h on 2 July 2009 due to a power interruption/outage. The J-2 North System "G" could not be restarted due to system programming problems caused by electrical interruptions. A programmer was called and the problems were fixed. The J-2 North System "G" was restarted at 1650 h on 6 July 2009 resulting in a downtime of 95. h. The J-2 North Treatment Building System shut down at 15:15 on 8 July 2009 due to electrical interruptions. The system was restarted at 15:05 on 9 July 2009 resulting in a downtime of 23.6 h. The J-2 North Treatment Building System shutdown at 1140 h on 30 July 2009 due to a power interruption. There were no alarms of VFD faults noted at the system. The system was restarted at 1540 h 30 July 2009 resulting in a downtime of 4.0 h.

The J-2 Range North MTUs E&F continue to operate at a flow rate of 250 GPM with over 360 million gallons of water treated and re-injected. The J-2 North System shut down at 1747 h on 2 July 2009 due to a power interruption/outage. The J-2 North Systems MTUs E&F were restarted at 1018 h on 5 July 2009 resulting in a downtime of 64 h. The J-2 Range North MTU F shutdown at 0129 h on 27 July 2009 due to a power interruption. There were no alarms of VFD faults noted at the system. The system was restarted at 0818 h 27 July 2009 resulting in a downtime of 6.82 h. The J-2 Range North MTU E shutdown at 1138 h on 30 July 2009 due to a power interruption. There was a VFD over current fault noted at the system. The system was restarted at 1523 h 30 July 2009 resulting in a downtime of 3.75 h.

J-3 Range Groundwater RRA

The J-3 Range Groundwater RRA consists of removal and treatment of contaminated groundwater to control further migration of explosives and perchlorate. ETR systems include single extraction wells, ex-situ treatment processes to remove explosives and perchlorate from the groundwater and use of the existing Fuel Spill-12 (FS-12) infiltration gallery to return treated water to the aquifer.

The J-3 Range System continues to operate at a flow rate of 195 GPM with over 259 million gallons of water treated and re-injected. The J-3 Range System shutdown at 1007 h on 20 July 2009 due to communication issues at FS-12. Alarm was tank level high and treatment plant sump level high. The system was restarted at 1319 h after a call from CH2M Hill that FS-12 was back online. Downtime resulted in 3.2 h. CH2M Hill notified ECC that FS-12 would be shutdown on 23 July 2009 for some communication upgrades. The J-3 System was shut down at 1010 h and restarted at 1027 h resulting in a downtime of 0.85 h. The J-3 Range System shutdown at 0121 h on 27 July 2009 due to a power interruption. There was a VFD over current fault noted at the system for each of the wells. The system was restarted at 0814 h 27 July 2009 resulting in a downtime of 6.95 h. The J-3 Range System shutdown at 1444 h on 28 July 2009 due to a power interruption. There was a VFD over current fault noted at the system. The system was restarted at 1628 h 28 July 2009 resulting in a downtime of 1.73 h.

J-2 Range East Groundwater RRA

The J-2 Range East Groundwater RRA consists of removal and treatment of groundwater to minimize down gradient migration of explosives and perchlorate. The J-2 Range East Extraction, Treatment and Injection (ETI) system includes the following components: three extraction wells in an axial array, an ex-situ treatment process consisting of an IX resin and GAC media to treat perchlorate and explosives and three infiltration trenches located along the lateral boundaries of the plume where treated water will enter the vadose zone and infiltrate into the aquifer. J-2 Range East system is running at a combined total flow rate of 425 gpm.

The J-2 East MTUs H and I continue to operate at a flow rate of 210 GPM with over 89 million gallons of water treated and re-injected. The J-2 East MTUs H and I shutdown at 1418 h on 28 July 2009 due to a power interruption. There was a VFD over current fault noted at the system. The system was restarted at 1022 h 29 July 2009 resulting in a downtime of 20.07 h.

The J-2 East MTU K continues to operate at a flow rate of 125 GPM with over 52 million gallons of water treated and re-injected. The J-2 East MTU K shutdown at 1418 h on 28 July 2009 due to a power interruption. There was a VFD over current fault noted at the system. The system was restarted at 1003 h 29 July 2009 resulting in a downtime of 19.75 h. The J-2 East MTU K shutdown at 1138 h on 29 July 2009 due to a power interruption. There were no alarms of VFD faults noted at the system. The system was restarted at 1714 h 30 July 2009 resulting in a downtime of 5.6 h.

The J-2 East MTU J continues to operate at a flow rate of 90 GPM with over 40 million gallons of water treated and re-injected. The J-2 East MTU J shutdown at 1139 h on 30 July 2009 due to a power interruption. There were no alarms of VFD faults noted at the system. The system was restarted at 1734 h 30 July 2009 resulting in a downtime of 5.92 h.

2. SUMMARY OF ACTIONS TAKEN

Samples collected during the reporting period are summarized in Table 2.

Process water samples were collected at Frank Perkins Road, Pew Road, J-2 Range North, J-3 Range, J-1 Range South and J-2 Range East treatment plants.

Long term monitoring (LTM) groundwater samples were collected from the Central impact Area, and Western Boundary study areas. Surface water samples were collected from Snake Pond.

Multi increment soil samples were collected from the Gun and Mortar positions.

MMR IAGWSP Tech Meeting Minutes 06-25-2009

The following are notes from the 25 June 2009 Technical Team Meeting of the Impact Area Groundwater Study Program office at Camp Edwards:

Action Items – Ben Gregson

- L Range/Soil Project
 1. IAGWSP provided additional information to EPA/MassDEP on melamine as it pertains to the Revised Draft L Range Bench Scale Study for Soil Treatment Project Note. ***EPA is satisfied and will provide a letter of response.***
 2. ***IAGWSP will provide the Revised Draft L Range Soil Removal Activities Project Note following review of resample data.***
 3. IAGWSP provided the figure that includes the L Range May sample data with replicate results.
 4. ***IAGWSP to provide a list of all outstanding project notes with a status update and a schedule for their submittal by 9 July.***

- Tungsten

1. IAGWSP provided the response to comments on the Phase II Tungsten Report to the Regulatory agencies.
 2. ***IAGWSP will provide the project note on proposed tungsten investigation/ monitoring tomorrow (26 June).***
 3. IAGWSP provided the scope of work for tungsten speciation study.
- GP-2 – IAGWSP provided Response to MassDEP Comments on The Draft Gun Position 2 (GP-2) Soil and Groundwater Investigation Report. Resolution on clean-up levels/risk screening is delaying issuance of the final report.
 - ***Northwest Corner RI/FS – IAGWSP will provide Response to EPA and MassDEP Comments by 09 July.***
 - ***Demo 1 – Regulatory Agencies will provide comments on the project note describing the way forward on the drive point results by 09 July.***
 - ***J-2 Range – IAGWSP contacted the homeowners at Farrell Drive to determine the status of their review of the license to sample the monitoring well on their property. The homeowners have not responded. Following the J-2 monitoring presentation, IAGWSP will determine if sampling of that well is critical.***
 - Western Boundary – Finalization of the RI/FS is being delayed while various issues are being worked out between IAGWSP, MassDEP, and EPA.

Cross-Cutting Issues – Lynne Jennings

EPA requested a discussion on issues with RI/FS submittals (consistency across different OUs, with the Safe Drinking Water Act administrative orders and other requirements). Lynne Jennings (EPA) provided a list of issues.

- Items 1 – 8** All parties concurred with the recommended approach.
- Item 9** Secondary Environmental Impacts. IAGWSP noted that sustainability is important to the Army and that secondary environmental impact from remedial alternatives, such as greenhouse gas emissions, should be considered somehow. EPA is unsure how or if secondary environmental impacts should be considered. EPA will review AFCEE documents to see how they address this issue.
- Item 10 - 11** All parties concurred with the recommended approach.
- Item 12-13** EPA will provide a chart with applicable regulatory standards and the risk screening process will be discussed at the 16 July Tech meeting.
- Item 14** MassDEP and EPA will continue discussion and finalize way forward.
- Item 15** All parties concurred with the recommended response.

J-2 North Groundwater Environmental Monitoring 2008 Update – Katie Thomas (JE); Mike Goydas (ECC) (A copy of the presentation was provided to meeting attendees).

- J-2 North Chemical Monitoring Activities:
 - one semiannual round (16 wells) Spring 2008; one annual round (66 wells) Fall 2008; MW-330M2 sampled (Nov 2007) to determine if perchlorate detected in Sept 2007 was real or low-level interference.
 - Perchlorate Sampling - Upgradient, mid-plume, and downgradient perchlorate sampling results and trends were discussed. The J-2 North Perchlorate Plume insights show the plume has narrowed slightly, max concentration has decreased, and the plume is slightly deeper near J2EW0001.
 - RDX Sampling – Upgradient and downgradient RDX sampling results and trends were discussed. The J-2 North RDX Plume insights show the plume is much smaller than previously depicted and is slightly deeper at J2EW0001.

Recommended changes to J-2 North Environmental Monitoring Network include:

- removing three wells (MW-348M1, MW-366, MW-381) from the monitoring network
 - decreasing perchlorate sampling to biennial (MW-229M2, M4, J2EW1-MW1-A, J2EW2-MW1-A, J2EW2-MW2-A, J2EW2-MW3-A, MW-300M3)
 - decrease sampling for perchlorate and explosives to biennial at MW-289S and MW-293S
 - decrease sampling for perchlorate to annual at MW-296M1, M2, MW-318M2, MW-331M2 (these are currently semi-annual)
 - eliminate sampling for explosives at MW-229M4, MW-296M2, MW-318M2, MW-300M3, MW-313M2, M3, MW-331M2, MW-348M2, J2EW1-MW1-A, J2EW2-MW1-A, J2EW2-MW2-A, J2EW2-MW3-A, J2EW3-MW2-A,B,C
- J-2 North Plant Performance – Three EWs operating at 375 gpm (Sept 2007 through Aug 2008)
 - Wood Road – Treated 116 million gallons; removed 10.04 lb of perchlorate and 0.02 lbs of RDX
 - Jefferson Road – Treated 61 million gallons; removed 0.58 lb of perchlorate and RDX ND in influent at EW-3
 - J-2 North Hydraulic Evaluation – Two semiannual groundwater level synoptic events conducted in March and September 2009
 - water tables continue to decrease; horizontal gradient remains consistent; inward gradients at the elevation of extraction; similar potentiometric surface
 Recommended changes to J-2 North Hydraulic Monitoring Network include:
 - decrease monitoring to annual event; eliminate select monitoring well screens located above 0 ft msl; outside the extraction interval
 - J-2 North Next Steps – No changes to system operation; implement changes to chemical and hydraulic monitoring networks; issue monitoring plan addendum with these changes; maintain schedule for sampling and develop annual report after September 2009 chemical and hydraulic sampling events.

J-2 East Environmental Monitoring 2008 Update – Katie Thomas (JE); Mike Goydas (ECC) (A copy of the presentation was provided to meeting attendees).

- J-2 East Chemical Monitoring Activities:
 - Two interim rounds: annual round (38 wells) Mar through May 2008; semiannual round (20 wells) Sept thru Nov 2008; one semiannual round (22 wells) Jan/Feb 2009; three borewater profile samples
 - Perchlorate Sampling – Western, Eastern, Far Eastern Lobe, Main Lobe sampling results and trends were discussed. The J-2 East Perchlorate Plume insights show the conceptualization of the plume has been revised slightly - high concentrations are within the core of the plume, max concentration has increased slightly, the plume is slightly narrower. Western lobe concentrations continued to decrease; Far Eastern lobe concentrations have decreased; decreases and consistent results in upgradient portion and downgradient wells remain ND.
 - RDX Sampling – Western, Main lobe sampling results and trends were discussed. The J-2 East RDX Plume insights show the western lobe is no longer depicted; concentrations in three wells beneath the source area have decreased to ND; no change in max concentration; highest concentrations are in the core of the plume; plume is not continuous downgradient of EW-5; concentrations at MW-399 have decreased.
 Recommended Changes to J-2 East Chemical Monitoring Network include:
 - increase sampling for explosives to semiannual (MW-04-M1)

- decrease sampling for explosives to annual (MW-310M1)
- decrease sampling for perchlorate and explosives to biennial (MW-372M1)
- decrease sampling for perchlorate and explosives to annual (MW-57D)
- MW-170M2 - will not be sampled as part of J-2 East sampling network (is already sampled annually as part of Former K Range)
- J-2 East MTU Results for MTU J, H, I, K included influent concentrations for perchlorate and RDX, gallons treated, and mass removed.
- J-2 East Semiannual Hydraulic Evaluation was based on one semiannual synoptic event (Feb 2009). Regional water level decreased approximately 0.67 feet across the entire area; continued drawdown from system operation has increased since Sept 2008; delayed response indicates presence of low-hydraulic-conductivity units.
- Plume Shell Update – Updated perchlorate and RDX plume shell represents Feb 2009 conditions and includes data from late 2003 to Feb 2009, migrated data collected from late 2003 to late 2008, used observed influent concentrations to revise areas near extraction wells. Tables showing the 2009 plume shell summary and plume shell comparison to 2006.75 plume shell were presented.
- Next Steps for J-2 East include no changes to system operation; issuing monitoring plan addendum that includes implementation of changes to chemical and monitoring network; maintaining schedule for chemical and hydraulic sampling events in Sept 2009; and conducting ETI system optimization for 2009 annual report.

Monitoring presentations for CIA and Western Boundary are scheduled for the next Tech Update Meeting.

=====

MMR IAGWSP Tech Meeting Minutes 07-16-2009

The following are notes from the 16 July 2009 Technical Team Meeting of the Impact Area Groundwater Study Program office at Camp Edwards:

Action Items – Ben Gregson

- L Range/Soil Project
 - ***EPA will provide a letter of response to the additional information provided on melamine via email.***

Soil/Source Action – Project Note Status – Ben Gregson
Soil Removal Project Notes

- B & D – Approvals have been obtained; next step is to begin soil removal in the field.
- Former K Range
 1. Investigation and Characterization of Area D PN – The next step is for Dave Hill (IAGWSP) and Bob Lim (EPA) to resolve the issue of sampling in Area D; IAGWSP will provide the PN 07/17/2009.
 2. Trenching – It is IAGWSP’s intention to clear to depth; EPA agreed to have clarifying language in the PN. IAGWSP will issue the revised PN to the Regulatory Agencies 7/17/09.
 3. Revised Soil Removal PN – IAGWSP will provide to the Regulatory Agencies on 07/23/2009.

- L Range
 1. On 07/02 IAGWSP submitted a revised draft of soil removal proposing excavation of grids that exceed the S1/GW-1. IAGWSP will provide a revised PN that excludes references to S1/GW-1.
 2. The Regulatory Agencies requested a PN on soil treatment to be submitted by 07/23/09. The Regulatory Agencies requested one PN for all sites with similar constituents; one PN for small amount of soil (e.g. K Range) that will go to L Range, and one PN for large amounts of soil (e.g. J-2 Ext) that will go off-site.
- CIA
 1. AFRL PN – Remaining issues: Post sampling acceptance criteria for replicates (IAGWSP and EPA have agreed with the number of replicates and this information will be used to evaluate the quality of the data); and screening particles of less than 1” in size. Regarding the quarter-acre grids, EPA will further discuss quarter-acre vs. total count for the whole area and respond back to IAGWSP next week.
- Former A
 1. PN was issued 07/07/2009; comments received from MassDEP, waiting for comments from EPA (due 07/23/2009). (Will clarify if 556’s were found there).
- J-1 and J-2
 1. Regulatory Agencies to provide comments on the J-1 and J-2 Soil Removal PNs .

Other Project Notes

- CIA Consolidated Shot – IAGWSP will provide the Revised PN to the Regulatory Agencies by 07/23/2009. Anticipate the consolidated shot will happen next week. (Note: EPA requested the details of the Former A PN be attached to this PN).
- Demo 1 Additional Wells – IAGWSP waiting for comments from EPA and MassDEP.
- Tungsten Piles – Status: The Guard is negotiating with landfills; USACE is negotiating this in the contract. EPA noted that the data from the existing wells is good and to hold on the PN.
- Tungsten Berm – IAGWSP submitted three weeks ago; EPA will provide comments early next week.

Phase II Tungsten Report – Technical team will meet in Concord next week to discuss issues. A summary report will be issued.

J-1 Source/UXO Conceptual Site Model Site Visit

- The J-1 site visit took place at 10:30 AM. The remainder of this meeting will be held 07/23/2009 at 9:00 AM. Agenda includes:
 - Monitoring Presentations – CIA and Western Boundary
 - Soil screening criteria and groundwater screening criteria tables prepared by EPA will be discussed. IAGWSP will prepare a table for Western Boundary, Northwest Corner, Demo 2, and GP-2 to be discussed at the meeting.

Next Tech Update Meeting:

July 23 – Discuss J-1 groundwater modeling

Monitoring Presentations: G&M; Former K Range, NWC

=====

MMR IAGWSP Tech Meeting Minutes 07-23-2009

The following are notes from the 23 July 2009 Technical Team Meeting of the Impact Area Groundwater Study Program office at Camp Edwards:

Status of Project Notes

- CIA Consolidated Shot Project Note – Complete
- K Range
 - UXO Related – IAGWSP/EPA visiting Location D site today to resolve the sampling issue. Pending EPA approval, IAGWSP will provide the final PN today.
 - Soil Removal – IAGWSP will distribute today (07-23-2009) with the understanding that soil sampling may be expanded later on.
- L Range Soil Removal – IAGWSP will address EPA comments ASAP.
- J-1/J-2 Soil Removal – EPA will provide comments today (07-23-2009).
- A Range Soil Removal – IAGWSP/EPA doing a site visit today (07-23-2009).
- CIA Soil Removal – IAGWSP/EPA to resolve replicates issue, then present to MassDEP for their concurrence.
- Overall Soil Treatment PN – IAGWSP anticipates issuing this PN next week.

CIA Monitoring Data Presentation – Bill Gallagher

A copy of the presentation was provided to meeting attendees. The presentation included groundwater sampling results, trends in wells, and recommendations.

- Groundwater samples were collected between May/June 08 and Nov/Dec 08 for explosives and perchlorate. There were no deviations to the current sampling plan. IAGWSP suggested EPA confirm this to agree the plan is being carried out as agreed upon.

RDX Concentration – Twelve wells were selected to evaluate potential changes in the RDX concentration. The three upgradient/source area wells showed some decreasing trends with the mass moving downgradient; the three mid-plume wells were relatively stable; and the four downgradient wells were relatively stable, with a slight decrease during this monitoring period.

Perchlorate Concentration – Five wells were selected to evaluate potential changes in the perchlorate concentration. The two CIA Boundary wells were stable; the three Impact Area Boundary wells showed increasing trends.

- Recommendations for the Monitoring Program
 - RDX Plume
Removing two wells (MW-97M2 currently sampled semi-annually and MW-99s currently sampled annually); and adding wells MW-86M1/semi-annually and MW-99M1/annually.
 - Perchlorate Plume – No changes proposed.

The Regulatory Agencies will receive this report for comment.

Western Boundary Monitoring Data Presentation – Bill Gallagher

A copy of the presentation was provided to meeting attendees. The presentation included groundwater sampling results, perchlorate results and concentration trends, and other analyte results detected as a result of the change in sampling protocol, and recommendations.

- The reporting period covered several sampling rounds conducted between Jan 08/Apr 09. Mar/Apr 09 sampling included a 72-well monitoring network with increased sampling frequency and number of analytes. All 72 wells have not been sampled; the remaining 14 wells will be sampled as part of the August sampling event.

Perchlorate Concentrations – Wells exhibiting the highest historical perchlorate concentrations all show a consistent and continuing decline; first time perchlorate detections in seven wells were all at concentrations well below the RL; the maximum detected perchlorate concentration within this reporting period was 1.9 ppb, all other network wells were 0.6 or less.

Wells within the Monument Beach Well field continue to exhibit low perchlorate concentrations, most at or below the RL.

Analytes added to this monitoring period

- explosives – ND in all network wells
- metals – none of the metals detected exceeded their respective MCL or MCP GW-1 standards
- chloroform was the only VOC detected
- SVOCs were not detected

- Recommendations for the Monitoring Program
 - reduction in the number of wells and frequency
 - removal of sampling for explosives, metals, VOCs, and SVOCs

The Regulatory Agencies will receive this report for comment.

Other Issues:

- It was agreed that the August 2009 sampling round data will be included in the monitoring data report.
- The Bourne Water District data should be included in distribution list for the report.
- The RSP and LTM plans should be reviewed with the Bourne Water District and Bourne Board of Health before going out to the public.

Risk Screening Table

- EPA provided a first-cut of a *Screening of Soil Relative to the Potential for Leaching to Groundwater Table*, using Northwest Corner as an example. It was agreed the table is a good reference to use for remedy and site closure, and that the format and process looks good. A determination needs to be made on using Region 9 levels when there aren't levels for MMR.

=====

MMR Cleanup Team Meeting for July 2009

The MMR Clean up Team (MMRCT), formerly the Impact Area Review Team (IART) and the Plume Cleanup Team (PCT) held a meeting on 8 July 2009. Discussion items included Installation Restoration Program (IRP) and Impact Area Groundwater Study Program (IAGWSP) updates.

The next meeting will be held 16 September 2009. The agenda will include late breaking news and responses to action items, as well as updates from the IAGWSP and IRP. The MMRCT meetings provide a forum for community input regarding issues related to both the IRP and the IAGWSP.

3. SUMMARY OF DATA RECEIVED

Table 4 summarizes the detections in groundwater, since 1997, that equaled or exceeded an EPA Maximum Contaminant Level (MCL), MassDEP MCL (MMCL) or Health Advisory (HA) for drinking water. Table 4 is updated on a monthly basis; discussions in the text are updated on the same schedule as Figures 1 through 8, which are discussed later in this section.

Table 5 summarizes the validated detections of explosives and perchlorate for all groundwater results received from 01 July through 31 July 2009. These results are compared to the MCL/HA values for respective analytes. First-time validated detections of Volatile Organic Compounds (VOC), Semi-Volatile Organic Compounds (SVOC), metals, herbicides and pesticides are included and discussed quarterly in the July, July, September, and December Monthly Progress Reports. Metals, chloroform, and bis (2-ethylhexyl) phthalate (BEHP) are excluded from Table 5 for the following reasons: metals are a natural component of groundwater, particularly at levels below MCLs or HAs; detections of chloroform are pervasive throughout Cape Cod and are not likely the result of military training activities; and BEHP is believed to be largely an artifact of the investigation methods and July be introduced to the samples during collection or analysis.

Figures 1 through 8 depict the cumulative results of groundwater analyses for the period from the start of the Impact Area Groundwater Study (1997) to the present. There are no new groundwater data to report for metals, VOC, SVOC, metals, pesticides or herbicides. The figures for this month's report are included on CD only. Each figure depicts results for a different analyte class:

- Figure 1 shows the results of explosive analyses by EPA Method 8330. This figure is updated and included each month.
- Figure 2 shows the results of inorganic analyses by methods E200.8, 300.0, 350.2M, 353M, 365.2, CYAN, IM40MB, IM40MBM, and IM40HG. This figure is included quarterly in the March, July, September, and December Monthly Progress Reports.
- Figure 3 shows the results of VOC analyses by methods OC21V, OC21VM, 504, 8021W, and SW8260 exclusive of chloroform detections. This figure is included quarterly in the March, July, September, and December Monthly Progress Reports.
- Figure 4 shows the chloroform results using the VOC analyses by method OC21V and OC21VM. This figure is included semi-annually in the July and December Monthly Progress Reports.
- Figure 5 shows the results of SVOC analyses by methods OC21B and SW8270, exclusive of detections of BEHP. This figure is included quarterly in the March, July, September, and December Monthly Progress Reports.
- Figure 6 shows the BEHP results using the SVOC analyses by methods OC21B and SW8270. This figure is included semi-annually in the July and December Monthly Progress Reports.
- Figure 7 shows the results of Pesticide (method OL21P) and Herbicide (method 8151) analyses. This figure is included quarterly in the March, July, September, and December Monthly Progress Reports.
- Figure 8 shows the results of Perchlorate analysis by method E314.0 or method SW846/6850. This figure is updated and included each month.

The concentrations from these analyses are depicted in Figures 1 through 8 compared to Maximum Contaminant Levels (MCLs) or Health Advisories (HAs) published by EPA for drinking water. The color coded legends are defined on each figure.

There are multiple labels listed for some wells in Figures 1 through 8, which indicate multiple well screens at different depths throughout the aquifer. The aquifer is approximately 200 to 300 feet thick in the study area. Well screens are positioned throughout this thickness based on various factors, including the results of groundwater profile samples, the geology, and projected locations of contaminants estimated by groundwater modeling. Generally, groundwater entering the top of the aquifer will move deeper into the aquifer as it moves radially outward from the top of the water table mound. Light blue dashed lines in Figures 1 through 8 depict water table contours. Groundwater generally moves perpendicular to these contours, starting at the center of the 70-foot contour (the top of the mound) and moving radially outward. The rate of vertical groundwater flow deeper into the aquifer slows as groundwater moves away from the mound.

The results presented in Figures 1 through 8 are cumulative, which provides a historical perspective on the data rather than a depiction of current conditions. Any detection at a well that equals or exceeds the MCL/DWEL/HA results in the well having a red symbol, regardless of later detections at lower concentrations, or later non-detects. The difference between historical and current conditions is generally contributed to the effectiveness of remedial actions. ETR systems are in operation at Demo1, J-1 South, J-2 North, J-2 East and J-3 Ranges to treat contaminated groundwater in order to control further migration of explosives compounds and/or perchlorate.

Figure 1: Explosives Compounds in Groundwater Compared to MCLs/HAs

Changes in detection trends in groundwater samples collected during the Spring 2009 system performance and long term monitoring sampling events at respective study areas are discussed in biweekly data updates (*Summary of Explosives and Perchlorate Results*).

Exceedances of drinking water criteria for explosives compounds have been indicated during past investigations in the following study areas:

- Demo Area 1 (wells 19, 31, 34, 73, 76, 77, 114, 129, 139, 165, 210, and 211);
- Demo Area 2 (wells 16, 160, 259, 262, and 404);
- Former A Range (well 206);
- The Impact Area and CS-19 (wells 58MW0001, 58MW0002, 58MW0009E, 58MW0011D, 58MW0016B, 58MW0016C, 58MW0018B; and wells 1, 2, 23, 25, 37, 38, 40, 43, 85, 86, 87, 88, 89, 90, 91, 93, 95, 98, 99, 100, 101, 102, 105, 107, 111, 112, 113, 176, 178, 184, 201, 203, 204, 207, 209, 212, 223, 235, OW-1, OW-2, and OW-6);
- Southeast Ranges (J-1 South, J-2 North, J-2 East, J-3 and L): (wells 58, 130, 132, 147, 153, 163, 164, 166, 171, 191, 193, 196, 198, 215, 218, 227, 232, 234, 247, 265, 289, 303, 306, 324, 326, 343, 360, 368, 369, 398, 477, 481, 485, 486, 487, and wells 90MW0022, 90MW0041, 90MW0054 and 90WT0013); and
- Northwest Corner of Base Boundary (well 323).

Demo Area 1 has a single well-defined source area and extent of contamination. As noted in Section 1 above, ETR systems at Frank Perkins Road and Pew Road in the Demo 1 study area include extraction wells, ex-situ treatment processes to remove explosives and perchlorate from the groundwater, and injection wells to return treated water to the aquifer. System performance

monitoring is performed at the Demo1 study area to assess the effectiveness of the treatment systems.

Demo Area 2 has had groundwater exceedances of the RDX HA at MW-16S, MW-160S, MW-259, MW-262M1, and MW-404M2. An RRA was performed at Demo2 in the fall of 2004. Source area soil was excavated and removed. Groundwater wells within the Demo 2 study area continue to be monitored under the LTM program.

The Former A Range has had exceedances of the RDX HA at MW-206M1. The S screen in this location is non-detect for all explosives. Groundwater wells within the Former A Range study area continue to be monitored under the LTM program.

The Central Impact Area (CIA) has a plume defined by RDX concentrations above the HA of 2 ppb. The plume originates primarily along Turpentine Road and extends downgradient to the west-northwest. Another source of RDX in the Impact Area is CS-19. Portions of CS-19 are currently under investigation by the Air Force Center for Environmental Excellence (AFCEE) under the Superfund program. Groundwater wells within the CIA study area continue to be monitored under the LTM program.

The Southeast Ranges have several groundwater plumes defined by concentrations of RDX above the HA of 2 ppb. As noted in Section 1 above, ETR systems are in place at J-1 South, J-2 North, J-2 East and J-3 Ranges to treat contaminated groundwater to control further migration of explosives compounds. System performance monitoring is performed at these study areas to assess the effectiveness of the treatment systems. Groundwater wells within the J-1 North and L Range study areas are monitored under the LTM program.

The Northwest Corner of the base boundary has validated detections of RDX in groundwater above the HA of 2 ppb at MW-323M2. The M1 screen in this location has validated detections of RDX in groundwater below 2 ppb. The S screen at this location is non-detect for explosives. Groundwater wells within the Northwest Corner study area continue to be monitored under the LTM program.

Figure 2: Metals in Groundwater Compared to MCLs/HAs

Exceedances of drinking water criteria for metals are scattered throughout the study area. Where two or more rounds of sampling data are available, the exceedances generally have not been replicated in consecutive sampling rounds. The exceedances have been measured for antimony, arsenic, cadmium, chromium, lead, molybdenum, sodium, thallium and zinc. Exceedances of the arsenic drinking water criteria were repeated at three (wells 58MW0010A, MW-7M1 and MW-45S) of the six locations with arsenic exceedances. At the remaining three locations (wells MW-3D, MW-52M2 and MW-152M1), arsenic exceedances were not repeated in subsequent results. Cadmium (well MW-52M3) and chromium (well MW-7M1) were each detected above drinking water criteria in a single sampling round in December-December 1999. Exceedances of the drinking water criteria for lead were repeated at two of four locations (wells ASP and MW-45S). At the remaining two locations (wells MW-2S and MW-7M1) lead exceedances were not repeated in subsequent results. Exceedances of the drinking water criteria for molybdenum were repeated at two of eight locations (wells MW-53M1 and MW-54S) with molybdenum exceedances. All of the molybdenum exceedances were observed in year 1998 and 1999 results. Exceedances of the drinking water criteria for sodium were repeated at 12 of the 21 locations with sodium exceedances (wells MW-2S, MW-21S, MW-46S, MW-57M3, MW-57M2, MW-57M1, MW-144S, MW-145S, MW-148S, MW-187D, ASP and SDW261160). Seven wells (MW-21S, MW-57M1, MW-57M3, MW-

187D, BHW215083B, BHW215083D and ASP) had sodium exceedances in year 2004, 2005, and/or 2006 results. Zinc exceeded the HA in seven wells, all of which are constructed of galvanized (zinc-coated) steel.

Groundwater samples sent for target analyte metals analysis are analyzed by Inductively Coupled Plasma (ICP) in accordance with EPA method SW846/6010 with the exception of thallium and antimony. Groundwater samples submitted for antimony and/or thallium analysis are analyzed by Inductively Coupled Plasma/Mass Spectroscopy (ICP/MS) in accordance with the EPA Method SW846/6020. The ICP/MS Method 6020 has greater sensitivity, lower detection limits and the added feature of selectivity for antimony and thallium.

There have been few exceedances of drinking water limits for antimony and thallium since the introduction of more sensitive methods. Antimony levels exceeding drinking water criteria were detected in samples from 13 locations; these levels were not detected in subsequent sampling rounds. Only two antimony exceedances (wells MW-38M2 and MW-73S) were measured since July 2003. Twelve of the 71 locations with thallium exceedances had repeated exceedances in subsequent sampling rounds (wells MW-7M1, MW-7M2, MW-19S, MW-45S, MW-47M2, MW-47M3, MW-52S, MW-52D, MW-54S, MW-54M1, MW-58S and MW-94M2). There have been no exceedances of thallium since July 2003.

The distribution and lack of repeatability of the metals exceedances is not consistent with a contaminant source, nor do the detections appear to be correlated with the presence of explosives or other organic compounds.

Figure 3: VOCs in Groundwater Compared to MCLs/HAs

Exceedances of drinking water criteria for VOCs are indicated in six general areas: Northeast Corner (well LRMW003), Impact Area boundary (MW-28S), CS-10 (wells 03MW0007A, 03MW0014A, and 03MW0020), FS-12 (wells MW-45S, 90MW0003, and ECMWSNP02D), and in the J-1 Range (well MW-187D). CS-10, LF-1 and FS-12 are sites located near the southern extent of the Training Ranges that are currently under investigation by AFCEE under the Superfund program. Exceedances of drinking water criteria were measured for tetrachloroethylene (PCE) at CS-10, for vinyl chloride at LF-1, and for methylene chloride, toluene, 1,2-dichloroethane, and ethylene dibromide (EDB) at FS-12. These compounds are believed to be associated with the sites under investigation by AFCEE; these sites currently have active treatment systems in place.

Figure 4: Chloroform in Groundwater Compared to MCLs

Chloroform has been widely detected in groundwater across the Upper Cape as stated in a joint press release from USEPA, MassDEP, IRP, and the Joint Programs Office. The Cape Cod Commission (2001) in their review of public water supply wells for 1999 found greater than 75% contained chloroform with an average concentration of 4.7 ug/L. The IRP has concluded chloroform is not the result of Air Force activities. A detailed discussion of the presence of chloroform in groundwater wells is provided in the Final Central Impact Area Groundwater Report (06/01).

Figure 5: SVOCs in Groundwater Compared to MCLs/HAs

Exceedances of drinking water criteria for SVOCs are scattered throughout the study area. All exceedances of drinking water criteria for SVOCs were measured for bis (2-ethylhexyl) phthalate (BEHP), with the exception of two wells. MW-264M1 (J-3 Range) had a detection of

benzo(a)pyrene at concentrations of more than twice the HA and MW-241M1 (L Range) had detections of naphthalene above the HA of 100 ppb. Detections of BEHP are presented separately in Figure 6 and discussed in the next paragraph.

Figure 6: BEHP in Groundwater Compared to MCLs

Exceedances of drinking water criteria for bis (2-ethylhexyl) phthalate (BEHP) are scattered throughout the study area. BEHP is believed to be largely an artifact of the investigation methods and July be introduced to the samples during collection or analysis. However, the potential that some of the detections of BEHP are the result of activities conducted at MMR has not been ruled out.

A detailed discussion of the presence of BEHP is provided in the Draft Completion of Work Report (7/98) and subsequent responses to comments. The theory that BEHP mostly occurs as an artifact, and is not really present in the aquifer, is supported by the results of subsequent sampling rounds that show much lower levels of the chemical after additional precautions were taken to prevent cross-contamination during sample collection and analysis. Only four locations (out of 93) showed BEHP exceedances in consecutive sampling rounds: 28MW0106 (located near SD-5, a site under investigation by AFCEE), 58MW0006E (located at CS-19), 90WT0013 (located at FS-12), and MW-146M1 (located at L Range). Subsequent sampling rounds at all these locations have had results below the MCL. Eleven wells (27MW0705, 27MW2061, C2-B, C6-C, C7-B, MW-47M2, MW-164M1, MW-168M1, MW-188M1, MW-196M1, and MW-198M1) had BEHP exceedances in the year 2002 and 2003 results. There have been no exceedances of BEHP in 2004, one exceedance of BEHP, at MW-356M1 (J-3 Range), in 2005, and one exceedance of BEHP, at MW-477M2 (J-1 Range), in 2008.

Figure 7: Herbicides and Pesticides in Groundwater Compared to MCLs/HAs

There has been one exceedance of drinking water criteria for pesticides, at well PPAWSMW-1. A contractor to the United States Air Force installed this monitoring well at the PAVE PAWS radar station in accordance with the Massachusetts Contingency Plan (MCP), in order to evaluate contamination from a fuel spill. The exceedance was for the pesticide dieldrin in a sample collected in December 1999. This well was resampled and after through review it was determined that the original result was a false positive.

There has been one exceedance of drinking water criteria for herbicides, at well MW-41M1 (Impact Area). This response well was installed downgradient of the Impact Area. The exceedance was for the herbicide pentachlorophenol in a sample collected in December 2000. There were no detections above the MCL of this compound in the three previous sampling rounds in 1999, nor in the subsequent sampling rounds in 2000, 2001, 2002, and 2003.

Figure 8: Perchlorate in Groundwater Compared to a 2 ppb Concentration

Changes in detection trends in groundwater samples collected during the Spring 2009 system performance and long term monitoring sampling events at respective study areas are discussed in biweekly data updates (*Summary of Explosives and Perchlorate Results*).

Sampling and analysis of groundwater for perchlorate was initiated at the end of the year 2000 as part of the IAGWSP. Effective March 2009, Test America is no longer analyzing for perchlorate by method 314. All perchlorate results in long term monitoring groundwater samples are being reported by the more definitive, sensitive method SW846/6850, which has a method detection limit

of 0.04 ug/L and a reporting limit of 0.2 ug/l. Therefore, there will be many low level estimated results (< 0.2 ug/L) reported for perchlorate in some LTM samples.

Cumulative exceedances of the 2 ppb concentration of perchlorate have been indicated during past investigations in the following study areas:

- Demo Area 1 (wells 19, 31, 32, 33, 34, 35, 36, 73, 75, 76, 77, 78, 114, 129, 139, 162, 165, 172, 210, 211, 225, 255, 258 and 341);
- Impact Area and CS-19 (wells 58MW0009C, 58MW0015; and wells 38, 89, 91, 93, 101, and OW-1);
- Southeast Ranges (J-1 South, J-2 North, J-2 East, J-3 and L): (wells 93, 125, 127, 128, 130, 132, 142, 143, 158, 163, 166, 193, 197, 198, 215, 232, 234, 237, 243, 247, 250, 263, 265, 286, 289, 293, 295, 300, 302, 303, 305, 307, 310, 313, 319, 321, 324, 326, 329, 335, 339, 343, 346, 348, 366, 368, 370, 393, and wells 90PZ0211, 90MW0022 and 90MW0054, 90WT0013, J2EW3-MW-2-B, and RS003P);
- Northwest Corner of Base Boundary (wells 4036009DC, 66, 270, 277, 278, 279, 283, 284, 287, 297, 301, 309, 323, and RSN0W3); and
- Western Boundary (wells 80, 233, and 267).

Demo Area 1 has a single well-defined source area and extent of contamination. As noted in Section 1 above; ETR systems at Frank Perkins Road and Pew Road in the Demo 1 study area include extraction wells, ex-situ treatment processes to remove explosives and perchlorate from the groundwater, and injection wells to return treated water to the aquifer. System performance monitoring is performed at the Demo1 study area to assess the effectiveness of the treatment systems.

The Impact Area has had eight locations with exceedances of the 2 ppb concentration of perchlorate. The perchlorate plume extends from near the center of the Impact Area to the northwest, in the vicinity of Burgoyne Road. Groundwater wells within the CIA study area continue to be monitored under the LTM program.

The Southeast Ranges have several groundwater plumes defined by concentrations of perchlorate above the HA of 2 ppb. As noted in Section 1 above, ETR systems are in place at J-2 North, J-2 East and J-3 Ranges to treat contaminated groundwater to control further migration of perchlorate. System performance monitoring is performed at these study areas to assess the effectiveness of the treatment systems. Groundwater wells within the J-1 North and L Range study areas are monitored under the LTM program.

The Northwest Corner has a perchlorate plume extending from Canal View Road at the base boundary to the Cape Cod Canal. Groundwater wells within the Northwest Corner study area continue to be monitored under the LTM program.

The Western Boundary has had three locations (MW-80M1, MW-233M3, and MW-267M1) which have exceeded the 2 ppb perchlorate MMCL in one or more sampling rounds. Only MW-233M3 has perchlorate detected above the 2ppb MMCL in the most recent sampling round (3/28/08). The perchlorate results for other Western Boundary wells are all below the MMCL. Groundwater wells within the Western Boundary study area continue to be monitored under the LTM program.

4. DELIVERABLES SUBMITTED

Deliverables submitted during the reporting period include the following:

Monthly Progress Report No. 147 June 2009	07/10/2009
Revised Draft J-1 Range Interberm Area RDX Delineation Project Note	07/02/2009
Revised Draft Former K Range Additional Characterization Activities Project Note	07/02/2009
2 nd Revised Draft Former K Range Additional Characterization Activities Project Note	07/23/2009
Final Former K Range Additional Characterization Activities Project Note	07/29/2009
2 nd Revised Draft L Range Soil Removal Project Note	07/02/2009
3 rd Revised Draft L Range Soil Removal Project Note	07/30/2009
Draft J-1 Range Soil Removal Project Note	07/10/2009
Draft J-2 Range Soil Removal Project Note	07/10/2009
Draft J-2 Range North 2008 Environmental Monitoring Report	07/16/2009
Draft J-2 Range East 6-Month Environmental Monitoring Report	07/31/2009
Draft Central Impact Area Groundwater Monitoring Report 2008	07/13/2009
Draft Demolition Area 2 Environmental Monitoring Report September 2007 through October 2008	07/23/2009
Revised Draft Former A Range Soil Removal Activities Project Note	07/23/2009
Draft Central Impact Area Feasibility Study	07/15/2009
Draft Demolition Area 1 Environmental and System Performance Monitoring Report RA Groundwater Treatment System Startup to September 2008	07/13/2009
Final CIA Source Removal AFRL Technology Demonstration Project Note	07/22/2009

5. SCHEDULED ACTIONS

The combined revised schedule is currently being updated.

The following documents are being prepared or revised during July:

- J-2 Range Remedial Investigation/Feasibility Study Report
- J-3 Range Remedial Investigation/Feasibility Study Report

TABLE 2
