MONTHLY PROGRESS REPORT #151
FOR OCTOBER 2009

EPA REGION I ADMINISTRATIVE ORDERS SDWA 1-97-1019 and 1-2000-0014

MASSACHUSETTS MILITARY RESERVATION
TRAINING RANGE AND IMPACT AREA

The following summary of progress is for the period from 01 October to 31 October 2009.

1. SUMMARY OF REMEDIATION ACTIONS

The following is a description of Remediation Actions (RA) underway at Camp Edwards as of October 2009. Remediation actions may include Rapid Response Actions (RRA). An RRA is an interim action that may be conducted prior to risk assessments or remedial investigations to address a known, ongoing threat of contamination to groundwater and/or soil.

Demo Area 1 Comprehensive Groundwater RA

The Demo Area 1 Comprehensive Groundwater RA consists of the removal and treatment of contaminated groundwater to control further migration of explosives and perchlorate. Extraction, treatment, and recharge (ETR) systems at Frank Perkins Road and Pew Road include extraction wells, ex-situ treatment processes to remove explosives and perchlorate from the groundwater, and injection wells to return treated water to the aquifer.

Phase 1 of the optimization of the Frank Perkins Road Treatment Facility commenced on 01 October 2009. This optimization was planned as part of the Environmental and System Performance Monitoring (ESPM) program at Demo 1. Phase 1 includes a rolling shut down of one extraction well at a time in order to allow stagnation zones in between extraction wells to migrate to the next downgradient well. As a result of this optimization effort, the Frank Perkins Road Treatment facility is operating at a reduced rate of 557 gallons per minute (gpm), with EW-502 (MW-432) offline. As of 30 October 2009, over 842 million gallons of water have been treated and re-injected.

The Pew Road System continues to operate at a flow rate of 103 gpm with over 126 million gallons of water treated and re-injected. The Pew Road System shutdown at 1149h on 29 October 2009. The alarm was FIT-1502 high flow which was triggered by a power surge or interruption. The system was restarted at 1159h on 29 October 2009 resulting in a downtime of 0.17 hours.

J-1 Range South Groundwater RRA

The J-1 Range South Groundwater RRA consists of removal and treatment of contaminated groundwater to control further migration of explosives. The ETR system includes a single extraction well, ex-situ treatment process to remove explosives from the groundwater, and an infiltration trench to return treated water to the aquifer.

The J-1 Range South System continued to operate at a flow rate of 45 gpm through 30 October 2009. The J-1 Range South system shutdown at 1837h on 29 September 2009, due to a momentary power surge or interruption which caused alarms to signal. The system was restarted at 1027h on 30 September 2009 for a total downtime of 15.83 hours. As of 30 October 2009, over 113 million gallons of water were treated and re-injected.

J-2 Range North Groundwater RRA

The J-2 Range North Groundwater RRA consists of removal and treatment of contaminated groundwater to control further migration of explosives and perchlorate. ETR systems include single extraction wells, ex-situ treatment processes to remove explosives and perchlorate from the groundwater, and infiltration basins to return treated water to the aquifer.

The J-2 Range North Treatment Building continues to operate at a flow rate of 125 gpm with over 202 million gallons of water treated and re-injected.

The J-2 Range North MTUs E&F continue to operate at a flow rate of 250 gpm with over 400 million gallons of water treated and re-injected.

The J-2 Range North MTU E shutdown at 2217h on 24 October 2009. The system was restarted 1001h on 25 October 2009 resulting in a downtime of 11.73 hours. There were no alarms from the computer but the VFD did have an over-current fault, which was triggered by a power surge or interruption. The J-2 Range North MTU F shutdown at 2204h on 24 October 2009. The system was restarted 0959h on 25 October 2009 resulting in a downtime of 11.92 hours. The alarm noted was groundwater pump fail, which was triggered by a power surge or interruption.

J-3 Range Groundwater RRA

The J-3 Range Groundwater RRA consists of removal and treatment of contaminated groundwater to control further migration of explosives and perchlorate. ETR systems include single extraction wells, ex-situ treatment processes to remove explosives and perchlorate from the groundwater and use of the existing Fuel Spill-12 (FS-12) infiltration gallery to return treated water to the aquifer.

The J-3 System continues to operate at a flow rate of 195 gpm with over 279 million gallons of water treated and re-injected.

The J-3 System tripped at 1716h on 18 October 2009 and was restarted at 0826h on 19 October 2009 resulting in a downtime of 15.16 hours. Cause was a false alarm caused by electrical interruption. The J-3 System shut down at 2208h on 24 October 2009. The system was restarted at 0816h on 26 October 2009 resulting in a downtime of 34.13 hours. There where no alarms noted, however the FS-12 system was shutdown as well due to power failure. The shut down was noted over the weekend but could not be restarted until 26 October 2009 as the plant cannot run if FS-12 is down. The J-3 System shut down at 1609h on 26 October 2009. The system was restarted at 1728 h on 26 October 2009 resulting in a downtime of 1.32 hours.

J-2 Range East Groundwater RRA

The J-2 Range East Groundwater RRA consists of removal and treatment of groundwater to minimize down gradient migration of explosives and perchlorate. The J-2 Range East Extraction, Treatment and Injection (ETI) system includes the following components: three extraction wells in an axial array, an ex-situ treatment process consisting of an IX resin and GAC media to treat perchlorate and explosives and three infiltration trenches located along the lateral boundaries of the plume where treated water will enter the vadose zone and infiltrate into the aquifer. J-2 Range East system is running at a combined total flow rate of 425 gpm.

The J-2 East MTUs H and I continue to operate at a flow rate of 210 gpm with over 113 million gallons of water treated and re-injected.

The J-2 East MTU K continues to operate at a flow rate of 125 gpm with over 68 million gallons of water treated and re-injected.

The J-2 East MTU J continues to operate at a flow rate of 90 gpm with over 50.5 million gallons of water treated and re-injected.

The J-2 East MTU J shut down at 2212h on 24 October 2009. The system was restarted 1028h on 25 October 2009 resulting in a downtime of 12.27 hours. The J-2 East MTU K shut down at 2207h on 24 October 2009. The system was restarted at 1018h on 25 October 2009 resulting in a downtime of 12.18 hours. The alarm was a groundwater pump fault. The VFD had an over-current fault as well, due to a power outage.

2. SUMMARY OF ACTIONS TAKEN

Samples collected during the reporting period are summarized in Table 2.

Process water samples were collected at Frank Perkins Road, Pew Road, J-2 Range North, J-3 Range, J-1 Range South and J-2 Range East treatment plants.

Long term monitoring (LTM) groundwater samples were collected from the J-1 North and Demo 2 study areas. Surface water samples were collected from Snake Pond. System performance monitoring (SPM) samples were collected from the J-1 Range South, J-2 Range East and J-3 Range study areas. Profile samples were collected from J-1 Range South Location B near DP-498.

Multi-increment soil samples were collected from the J-1 South study area. Soil screening and excavation was conducted at the L Range and Northern CIA Source areas.

MMR IAGWSP Tech Meeting Minutes 10-01-2009

The following are notes from the 01 October 2009 Technical Team Meeting of the Impact Area Groundwater Study Program office at Camp Edwards:

Action Items

- Action items from September 17 were reviewed and a revised action item list will be issued.

Soil/Source Actions Updates

- Source Removal Update – All source removal PjN's submitted have been approved. The Soil Treatment PjN CRM will be held today.
    - CIA
        - North Area – Excavated first lift, working on second lift. Geophysical survey has been performed; currently screening soil.
        - Southern Area – Excavation of first lift almost complete, next step is the geophysical survey.
    - L Range – Excavation complete. Received post excavation samples results for eight of the ten excavated grids and the consolidated shot location. All results are non-detect. Anticipate results for the two remaining grids next week.

- o J-1 – Preparing for excavation in three areas: J-1 South, Interberm Area, and Tank Target to the North. Of 12 grids sampled in J-1 South, four grids had elevated RDX detects. Collecting samples in two additional grids in the South to bound the RDX.
- o J-2 – Awaiting MIS results from 12 grids in the mid-range area.
- o Former K – UXO clearance in area E complete. Collected additional MIS samples for perchlorate in area F.

Propose to screen and stockpile soil at each range until ready to be treated.

Response to Comments on Draft Soil Treatment PN

EPA Comments

- General Comment #3 – IAGWSP will provide a list of contaminants detected in soils. Second Paragraph last sentence EPA questioned the statement "achieved treatment goals". IAGWSP will revise the language.
- General Comment #4 – IAGWSP will note that compounds identified by method SW846/8330B will be inclusive of MNX, DNX, and TNX.
- EPA noted Leachate Concern – IAGWSP agreed to sample collected leachate, if any is generated, for explosives and metals to have a better understanding of treatment mechanisms.
- General Comment #6 – Test for moisture content and pH; describe how samples will be collected.
- General Comment #8 – EPA requested sampling for SPLP; EPA will provide more details on the process to determine if this is truly necessary and what will be done with the results.
- General Comment #10 – Restoration Plan for L Range/CS-18. Issue: Discussed issue of putting UXO screened soil back, as future geophysical investigations may be hindered from metal content. Disposition of treated soil will be discussed with UXO Working Group.
- Comment #4 – EPA requested a replicate from each grid (7 grids) for every round of sampling.
- Comments #8/9 – IAGWSP will provide further details for sampling for moisture content and pH.
- Comment #10 – Rational for sampling of all constituents is unclear.

DEP Comments

- Comment #1/2 – Revise PN to make clear to keep pH at greater than11.
- Comment #3 –Discussed Sampling Methods 1 and 2. IAGWSP will rewrite response for DEP's review.

DNT/NG Leaching Study Presentation – Dave Margolis (USACE)

Experimental Findings: Nitroglycerin (NG) and Dinitrotoluene (DNT) in Propellant Residues. Copy of presentation was provided to meeting attendees.

The presentation provided the conceptual model for propellant compounds; the objectives of ERDC/CRREL experiments; described the batch tests, column tests, and dissolution tests performed by ERDC and CRREL and how the results support the conceptual model.

Conclusions:

- About 5% of total NG in fresh fired propellant expected to be released gradually in first few months after firing. The small concentration will be biodegraded.
- Natural microbial communities are well-adapted to consume this small rate of release.
- No NG or DNT expected to be released from weathered fired propellant grains (permanently encapsulated).
- Groundwater has not been impacted by propellant residue.

- Photodegradation will also reduce NG and DNT concentrations on the soil surface.

Art Rude, EPA consultant, concurs with the presentation and comments by Mr. Margolis. Dave McTigue, EPA consultant, also concurs stating the conceptual model is consistent with what was seen in the lab and in the field. EPA noted that everyone who worked on this experiment should be commended and the results will help EPA in their decision-making process.

On Page 11, second bullet, MassDEP questioned the word "permanently" in the statement that "Unavailable NG is "permanently" encapsulated (not exposed)." Mr. Margolis discussed and will restate. The next step is for EPA to provide formal comments on the July 2009 report, the report will be finalized and wrapped into decision making for Small Arms Ranges and Gun and Mortar Position.

J-1 RI/FS/RSP – Schedule of Deliverables/Reviews

- The final J-1 RI/FS completion date is 23 December 2009; Draft RSP due to Agencies on 16 December.

J-1 South Study Area

- IAGWSP will provide text and revised figures today. EPA to provide feedback next week for use on the next four sub-sections.
- Revise the J-1 South plume shell. EPA will review comments on the groundwater portion with MassDEP for discussion at the 15 October 2009 Tech Update Meeting.

Gun and Mortar

- Regulatory Agencies to provide feedback on the adequacy of the last round of sampling and amount of data needed to proceed with writing the report.

L Range

- RI/FS is 95% complete. IAGWSP will proceed with completion.

Western Boundary/Demo 2/Northwest Corner

- IAGWSP to provide Regulatory Agencies the Draft Decision Document by 08 October 2009.

Soil Treatment Project Note

- IAGWSP to revise RCL and provide RLSO.
- EPA to provide data for SPLP sampling at various levels.
- IAGWSP to provide revision of sampling procedure.

J-1 Soil Screening and Groundwater Screening Tables Meeting – October 14
Next Tech Update Meetings - October 15
October 29

==========

MMR IAGWSP Tech Meeting Minutes 10-15-2009

The following are notes from the 15 October 2009 Technical Team Meeting of the Impact Area Groundwater Study Program office at Camp Edwards:

Action Items

- Action items from October 1 were reviewed and a revised action item list will be issued.

Soil/Source Actions Updates

- The Soil Treatment PjN Revised RCL is being prepared by IAGWSP.
- Work Status
  - CIA
  - North Area – Continue to excavate 1' to 2' lift and screening soil from the 0' to 1' lift.
  - Southern Area – Completed geophysical survey.
    As of last week, excavated approximately 3850 cubic yards (cy) of material; screened 1100 cy; stockpiled 750 cy.
  - L Range – Excavation and stockpiling complete. All ten grids in the excavated source area are non-detect (ND). There were 10 MEC finds, all 40 mm projectiles: two were suspect HE and eight were practice rounds with potential live fuses. These items will be included in future reports.
  - J-1 South – UXO clearing four grids scheduled for excavation, awaiting sample results from 2 grids.
  - J-2 – Received results from MIS samples collected in early September. In mid-range area, results were ND for explosives and low level detects for perchlorate.
  - Former K – Completed UXO clearance in Area E future excavation footprint and support area; awaiting MIS sample results for perchlorate from Area F.
  - EPA requested an excavation schedule for Interberm Area and Tank Target Area.

J-1 Range

- J-1 South Revised Plume Shell and Alternative Testing – Katie Thomas (JE)
  (A copy of the presentation was provided to the meeting attendees).

  The 2008 RI/FS revised plume shell includes two new kriging zones to better represent relatively thin high concentration core of the plume and lower concentration field upgradient of the EW and thus influent concentrations in the EW that are closer to observed values; removed select control points that conflicted with recent data to better match observed conditions; and developed an attenuation rate for historic migrated data within the core of the plume at and near the base boundary. A table showing the comparison of the plume shell and revised plume shell in plume water volume, maximum concentration in plume shell and in model grid, total mass in plume shell, and mass above cut-off in plume shell was presented. A summary of performance of the groundwater alternatives was also presented. For Alternatives 1 and 2, the existing system will be shutoff when a remedial decision has been made, for this FS that is estimated to be 2009.75. For Alternatives 3, 4, and 5, the estimated shutoff time is when extraction well(s) influent RDX concentrations are predicted to fall below the method detection limit of 0.25 ppb. The revised tables with time frames will be included in the FS. The Alternatives
  Summary show the revised plume shell is a much closer representation of recent observations; plume restoration is accelerated slightly; results for the alternatives are comparatively similar.

- J-1 North Alternatives – Location of drive points and/or wells at J-1 North was discussed. The Guard indicated that Wood Road is relatively heavily traveled during training activities, with complicating factors including sensitive habitat. It was decided to move up the sampling date for several wells planned to be sampled in the next sampling round for perchlorate (MW-370 M1; MW-256 M1 and D; MW-346 M2; MW-205 M1; MW-401 M1; and

MW-430 M1 and M2). A decision on the location of the new well(s) will be made following a review of the sampling results.

- J-1 RI/FS Source Area Subsection (rows 0-6) - EPA noted the rewrite of the subsection was clear and well presented. Regarding the amount of mass, EPA understood differentiation between UXO and fuses, and requested adding approximate energetic mass to summary table for areas where "small quantity energetics" were found. EPA also suggested a figure that shows where the disposal areas and burn pits are located and where the MEC items were found.

Former A Range Groundwater Monitoring Presentation – Bill Gallagher (IAGWSP)
(A copy of the presentation was provided to the meeting attendees).

- The groundwater sampling period covers two reporting periods conducted in June 2008 and June 2009 at three wells (MW-149S, MW-206S, and MW-249M3). All samples collected were analyzed for explosives; samples collected from MW-249M3 were also tested for perchlorate. In 2009, perchlorate Method 314.0 was replaced by Method SW846/6850.
    - Explosives were detected in samples collected from MW-249M3 only. TNT, 2A-DNT, and 4A-DNT were detected in the 2008 sample at concentrations ranging from 0.25 ppb to 0.34 ppb; only TNT was present in the 2009 sample at 0.39 ppb. There are no clear trends in the data.
    - Perchlorate was detected at a low concentration of 0.075 ppb in the 2009 sample at MW-249M3. There was a prior detection in November 2004 in MW-249M3 at 0.44J ppb (field duplicate). The presence in 2009 is likely the result of increased sensitivity of EPA Method 6850.

  Recommendations: Continue monitoring as in the past with no change in frequency or analytes. Future samples should continue to be collected on an annual basis from MW-149S, MW-206S, and MW-249M3 for explosives and MW-249M3 for perchlorate.

Next Tech Update Meeting - October 29

==========

MMR IAGWSP Tech Meeting Minutes 10-29-2009

The following are notes from the 29 October 2009 Technical Team Meeting of the Impact Area Groundwater Study Program office at Camp Edwards:

Action Items

- Action items from October 15 were reviewed and a revised action item list will be issued.

Soil/Source Actions Updates

- Former A Range – IAGWSP and EPA visited the proposed location for one additional well. EPA agreed with the location and drilling technique; MassDEP requested IAGWSP confirm the location with Elliott Jacobs (MassDEP). IAGWSP proposed not performing the additional data collection requested by EPA due to the high cost and limited benefit. Lynne Jennings (EPA) agreed and will discuss the possibility of drilling another well. The Project Note will be signed today.

- Work Status
  - Soil Removal Project Notes – All have been signed.
  - Soil Treatment Project Note – IAGWSP will provide signed PN today.
  - CIA North Area – Continuing screening and stockpiling of excavated soil. The bulldozer left the site last week, anticipate return is four to five weeks to resume excavation.
  - CIA Southern Area – Completed post-excavation (0-1') geophysical survey.
  - Former A Range – Started vegetation clearance in preparation for soil removal in the berms.
  - L Range – Completed excavation and began construction of the treatment cell.
  - J-1 Range South – Completed UXO clearance of four grids scheduled to be excavated. Received MIS sample results from two grids, I1 and J1. RDX concentration at Grids I1 and J1 were 540 and 380 ug/Kg, respectively; plan to rerun the sample collected from grid I1. Agreed to scrape 6" off front face of firing berm during excavation in the four adjacent grids. Dave Hill (IAGWSP) will provide a revised Project Note.
  - Former K – Results of MIS sampling in Area F showed low level detection of perchlorate in the sub-areas. EPA requested resampling of the sub-areas to validate data.

J-3 Barrage Rocket Site – Dave Hill

- Cleared 21 transects through forest, performed EM-61 Survey. Performed detailed reconnaissance on transects 1, 2 and 3 and dug 12 "C" size anomalies, of which 11 were munition items. IAGWSP proposes to perform a similar type activity in the remaining transects to establish boundaries of this site. Mr. Hill will provide a Project Note with figure today, 29 October 2009.

Non-Specific Operable Unit Groundwater Monitoring Presentation – Dave Hill

Of the 22 wells in the non-specific OU, MW-28S is the only well currently being sampled. The levels at MW-28S are below standards. There are no actionable levels in the groundwater. The recommendation is to discontinue sampling this well and no future sampling is proposed under the non-specific and small OU interim groundwater monitoring program.

It was agreed that IAGWSP will research the 22 wells and other wells that aren't currently in an OU, (using the 2005 interim monitoring plan as a reference, including the MOR dated August 2005) to determine rationale of what was sampled, detections, etc. for future review.

12 Farrell Drive Well – Jane Dolan

EPA contacted the homeowner. The homeowner verbally agreed to a one time sampling event and decommission of the well on the property. A license agreement will be presented for the homeowner's signature.

IAGWSP and EPA will develop a list of on-Base and off-Base wells for abandonment.

Next Tech Meeting – November 12

==========

MMR Cleanup Team Meeting for October 2009

The MMR Clean up Team (MMRCT), formerly the Impact Area Review Team (IART) and the Plume Cleanup Team (PCT) held a meeting on 14 October 2009. Discussion items included Installation Restoration Program (IRP) and Impact Area Groundwater Study Program (IAGWSP) updates.

There is no meeting scheduled for November, the next meeting will be held 9 December 2009. The agenda will include late breaking news and responses to action items, as well as updates from the IAGWSP and IRP. The MMRCT meetings provide a forum for community input regarding issues related to both the IRP and the IAGWSP.

3. SUMMARY OF DATA RECEIVED

Table 4 summarizes the detections in groundwater, since 1997, that equaled or exceeded an EPA Maximum Contaminant Level (MCL), MassDEP MCL (MMCL) or Health Advisory (HA) for drinking water. Table 4 is updated on a monthly basis; discussions in the text are updated on the same schedule as Figures 1 through 8, which are discussed later in this section.

Table 5 summarizes the validated detections of explosives and perchlorate for all groundwater results received from 01 October through 31 October 2009. These results are compared to the MCL/HA values for respective analytes. First-time validated detections of Volatile Organic Compounds (VOC), Semi-Volatile Organic Compounds (SVOC), metals, herbicides and pesticides are included and discussed quarterly in the March, October, October, and December Monthly Progress Reports. Metals, chloroform, and bis (2-ethylhexyl) phthalate (BEHP) are excluded from Table 5 for the following reasons: metals are a natural component of groundwater, particularly at levels below MCLs or HAs; detections of chloroform are pervasive throughout Cape Cod and are not likely the result of military training activities; and BEHP is believed to be largely an artifact of the investigation methods and may be introduced to the samples during collection or analysis.

Figures 1 through 8 depict the cumulative results of groundwater analyses for the period from the start of the Impact Area Groundwater Study (1997) to the present. There are no new groundwater data to report for metals, VOC, SVOC, metals, pesticides or herbicides. The figures for this month's report are included on CD only. Each figure depicts results for a different analyte class:

- Figure 1 shows the results of explosive analyses by EPA Method 8330. This figure is updated and included each month.
- Figure 2 shows the results of inorganic analyses by methods E200.8, 300.0, 350.2M, 353M, 365.2, CYAN, IM40MB, IM40MBM, and IM40HG. This figure is included quarterly in the March, June, October, and December Monthly Progress Reports.
- Figure 3 shows the results of VOC analyses by methods OC21V, OC21VM, 504, 8021W, and SW8260 exclusive of chloroform detections. This figure is included quarterly in the March, June, October, and December Monthly Progress Reports.
- Figure 4 shows the chloroform results using the VOC analyses by method OC21V and OC21VM. This figure is included semi-annually in the June and December Monthly Progress Reports.
- Figure 5 shows the results of SVOC analyses by methods OC21B and SW8270, exclusive of detections of BEHP. This figure is included quarterly in the March, June, October, and December Monthly Progress Reports.

- Figure 6 shows the BEHP results using the SVOC analyses by methods OC21B and SW8270. This figure is included semi-annually in the June and December Monthly Progress Reports.
- Figure 7 shows the results of Pesticide (method OL21P) and Herbicide (method 8151) analyses. This figure is included quarterly in the March, June, October, and December Monthly Progress Reports.
- Figure 8 shows the results of Perchlorate analysis by method E314.0 or method SW846/6850. This figure is updated and included each month.

The concentrations from these analyses are depicted in Figures 1 through 8 compared to Maximum Contaminant Levels (MCLs) or Health Advisories (HAs) published by EPA for drinking water. The color coded legends are defined on each figure.

There are multiple labels listed for some wells in Figures 1 through 8, which indicate multiple well screens at different depths throughout the aquifer. The aquifer is approximately 200 to 300 feet thick in the study area. Well screens are positioned throughout this thickness based on various factors, including the results of groundwater profile samples, the geology, and projected locations of contaminants estimated by groundwater modeling. Generally, groundwater entering the top of the aquifer will move deeper into the aquifer as it moves radially outward from the top of the water table mound. Light blue dashed lines in Figures 1 through 8 depict water table contours. Groundwater generally moves perpendicular to these contours, starting at the center of the 70-foot contour (the top of the mound) and moving radially outward. The rate of vertical groundwater flow deeper into the aquifer slows as groundwater moves away from the mound.

The results presented in Figures 1 through 8 are cumulative, which provides a historical perspective on the data rather than a depiction of current conditions. Any detection at a well that equals or exceeds the MCL/DWEL/HA results in the well having a red symbol, regardless of later detections at lower concentrations, or later non-detects. The difference between historical and current conditions is generally contributed to the effectiveness of remedial actions. ETR systems are in operation at Demo1, J-1 South, J-2 North, J-2 East and J-3 Ranges to treat contaminated groundwater in order to control further migration of explosives compounds and/or perchlorate.

Figure 1: Explosives Compounds in Groundwater Compared to MCLs/HAs

Changes in detection trends in groundwater samples collected during the 2009 system performance and long term monitoring sampling events at respective study areas are discussed in biweekly data updates (*Summary of Explosives and Perchlorate Results)*.

Exceedances of drinking water criteria for explosives compounds have been indicated during past investigations in the following study areas:

- Demo Area 1 (wells 19, 31, 34, 73, 76, 77, 114, 129, 139, 165, 210, and 211);
- Demo Area 2 (wells 16, 160, 259, 262, and 404);
- Former A Range (well 206);
- The Impact Area and CS-19 (wells 58MW0001, 58MW0002, 58MW0009E, 58MW0011D, 58MW0016B, 58MW0016C, 58MW0018B; and wells 1, 2, 23, 25, 37, 38, 40, 43, 85, 86, 87, 88, 89, 90, 91, 93, 95, 98, 99, 100, 101, 102, 105, 107, 111, 112, 113, 176, 178, 184, 201, 203, 204, 207, 209, 212, 223, 235, OW-1, OW-2, and OW-6);
- Southeast Ranges (J-1 South, J-2 North, J-2 East, J-3 and L): (wells 58, 130, 132, 147, 153, 163, 164, 166, 171, 191, 193, 196, 198, 215, 218, 227, 232, 234, 247, 265, 289, 303, 306, 324,

326, 343, 360, 368, 369, 398, 477, 481, 485, 486, 487, and wells 90MW0022, 90MW0041, 90MW0054 and 90WT0013); and
- Northwest Corner of Base Boundary (well 323).

Demo Area 1 has a single well-defined source area and extent of contamination. As noted in Section 1 above, ETR systems at Frank Perkins Road and Pew Road in the Demo 1 study area include extraction wells, ex-situ treatment processes to remove explosives and perchlorate from the groundwater, and injection wells to return treated water to the aquifer. System performance monitoring is performed at the Demo1 study area to assess the effectiveness of the treatment systems.

Demo Area 2 has had groundwater exceedances of the RDX HA at MW-16S, MW-160S, MW-259, MW-262M1, and MW-404M2. An RRA was performed at Demo2 in the fall of 2004. Source area soil was excavated and removed. Groundwater wells within the Demo 2 study area continue to be monitored under the LTM program.

The Former A Range has had exceedances of the RDX HA at MW-206M1. The S screen in this location is non-detect for all explosives. Groundwater wells within the Former A Range study area continue to be monitored under the LTM program.

The Central Impact Area (CIA) has a plume defined by RDX concentrations above the HA of 2 ppb. The plume originates primarily along Turpentine Road and extends downgradient to the west-northwest. Another source of RDX in the Impact Area is CS-19. Portions of CS-19 are currently under investigation by the Air Force Center for Environmental Excellence (AFCEE) under the Superfund program. Groundwater wells within the CIA study area continue to be monitored under the LTM program.

The Southeast Ranges have several groundwater plumes defined by concentrations of RDX above the HA of 2 ppb. As noted in Section 1 above, ETR systems are in place at J-1 South, J-2 North, J-2 East and J-3 Ranges to treat contaminated groundwater to control further migration of explosives compounds. System performance monitoring is performed at these study areas to assess the effectiveness of the treatment systems. Groundwater wells within the J-1 North and L Range study areas are monitored under the LTM program.

The Northwest Corner of the base boundary has validated detections of RDX in groundwater above the HA of 2 ppb at MW-323M2. The M1 screen in this location has validated detections of RDX in groundwater below 2 ppb. The S screen at this location is non-detect for explosives. Groundwater wells within the Northwest Corner study area continue to be monitored under the LTM program.

Figure 2: Metals in Groundwater Compared to MCLs/HAs

Exceedances of drinking water criteria for metals are scattered throughout the study area. Where two or more rounds of sampling data are available, the exceedances generally have not been replicated in consecutive sampling rounds. The exceedances have been measured for antimony, arsenic, cadmium, chromium, lead, molybdenum, sodium, thallium and zinc. Exceedances of the arsenic drinking water criteria were repeated at three (wells 58MW0010A, MW-7M1 and MW-45S) of the six locations with arsenic exceedances. At the remaining three locations (wells MW-3D, MW-52M2 and MW-152M1), arsenic exceedances were not repeated in subsequent results. Cadmium (well MW-52M3) and chromium (well MW-7M1) were each detected above drinking water criteria in a single sampling round in December-December 1999. Exceedances of the

drinking water criteria for lead were repeated at two of four locations (wells ASP and MW-45S). At the remaining two locations (wells MW-2S and MW-7M1) lead exceedances were not repeated in subsequent results. Exceedances of the drinking water criteria for molybdenum were repeated at two of eight locations (wells MW-53M1 and MW-54S) with molybdenum exceedances. All of the molybdenum exceedances were observed in year 1998 and 1999 results. Exceedances of the drinking water criteria for sodium were repeated at 12 of the 21 locations with sodium exceedances (wells MW-2S, MW-21S, MW-46S, MW-57M3, MW-57M2, MW-57M1, MW-144S, MW-145S, MW-148S, MW-187D, ASP and SDW261160). Seven wells (MW-21S, MW-57M1, MW-57M3, MW-187D, BHW215083B, BHW215083D and ASP) had sodium exceedances in year 2004, 2005, and/or 2006 results. Zinc exceeded the HA in seven wells, all of which are constructed of galvanized (zinc-coated) steel.

Groundwater samples sent for target analyte metals analysis are analyzed by Inductively Coupled Plasma (ICP) in accordance with EPA method SW846/6010 with the exception of thallium and antimony. Groundwater samples submitted for antimony and/or thallium analysis are analyzed by Inductively Coupled Plasma/Mass Spectroscopy (ICP/MS) in accordance with the EPA Method SW846/6020. The ICP/MS Method 6020 has greater sensitivity, lower detection limits and the added feature of selectivity for antimony and thallium.

There have been few exceedances of drinking water limits for antimony and thallium since the introduction of more sensitive methods. Antimony levels exceeding drinking water criteria were detected in samples from 13 locations; these levels were not detected in subsequent sampling rounds. Only two antimony exceedances (wells MW-38M2 and MW-73S) were measured since October 2003. Twelve of the 71 locations with thallium exceedances had repeated exceedances in subsequent sampling rounds (wells MW-7M1, MW-7M2, MW-19S, MW-45S, MW-47M2, MW-47M3, MW-52S, MW-52D, MW-54S, MW-54M1, MW-58S and MW-94M2). There have been no exceedances of thallium since October 2003.

The distribution and lack of repeatability of the metals exceedances is not consistent with a contaminant source, nor do the detections appear to be correlated with the presence of explosives or other organic compounds.

Figure 3: VOCs in Groundwater Compared to MCLs/HAs

Exceedances of drinking water criteria for VOCs are indicated in six general areas: Northeast Corner (well LRMW003), Impact Area boundary (MW-28S), CS-10 (wells 03MW0007A, 03MW0014A, and 03MW0020), FS-12 (wells MW-45S, 90MW0003, and ECMWSNP02D), and in the J-1 Range (well MW-187D). CS-10, LF-1 and FS-12 are sites located near the southern extent of the Training Ranges that are currently under investigation by AFCEE under the Superfund program. Exceedances of drinking water criteria were measured for tetrachloroethylene (PCE) at CS-10, for vinyl chloride at LF-1, and for methylene chloride, toluene, 1,2-dichloroethane, and ethylene dibromide (EDB) at FS-12. These compounds are believed to be associated with the sites under investigation by AFCEE; these sites currently have active treatment systems in place.

Figure 4: Chloroform in Groundwater Compared to MCLs

Chloroform has been widely detected in groundwater across the Upper Cape as stated in a joint press release from USEPA, MassDEP, IRP, and the Joint Programs Office. The Cape Cod Commission (2001) in their review of public water supply wells for 1999 found greater than 75% contained chloroform with an average concentration of 4.7 ug/L. The IRP has concluded chloroform is not the result of Air Force activities. A detailed discussion of the presence of

chloroform in groundwater wells is provided in the Final Central Impact Area Groundwater Report (06/01).

Figure 5: SVOCs in Groundwater Compared to MCLs/HAs

Exceedances of drinking water criteria for SVOCs are scattered throughout the study area. All exceedances of drinking water criteria for SVOCs were measured for bis (2-ethylhexyl) phthalate (BEHP), with the exception of two wells. MW-264M1 (J-3 Range) had a detection of benzo(a)pyrene at concentrations of more than twice the HA and MW-241M1 (L Range) had detections of naphthalene above the HA of 100 ppb. Detections of BEHP are presented separately in Figure 6 and discussed in the next paragraph.

Figure 6: BEHP in Groundwater Compared to MCLs

Exceedances of drinking water criteria for bis (2-ethylhexyl) phthalate (BEHP) are scattered throughout the study area. BEHP is believed to be largely an artifact of the investigation methods and may be introduced to the samples during collection or analysis. However, the potential that some of the detections of BEHP are the result of activities conducted at MMR has not been ruled out.

A detailed discussion of the presence of BEHP is provided in the Draft Completion of Work Report (7/98) and subsequent responses to comments. The theory that BEHP mostly occurs as an artifact, and is not really present in the aquifer, is supported by the results of subsequent sampling rounds that show much lower levels of the chemical after additional precautions were taken to prevent cross-contamination during sample collection and analysis. Only four locations (out of 93) showed BEHP exceedances in consecutive sampling rounds: 28MW0106 (located near SD-5, a site under investigation by AFCEE), 58MW0006E (located at CS-19), 90WT0013 (located at FS-12), and MW-146M1 (located at L Range). Subsequent sampling rounds at all these locations have had results below the MCL. Eleven wells (27MW0705, 27MW2061, C2-B, C6-C, C7-B, MW-47M2, MW-164M1, MW-168M1, MW-188M1, MW-196M1, and MW-198M1) had BEHP exceedances in the year 2002 and 2003 results. There have been no exceedances of BEHP in 2004, one exceedance of BEHP, at MW-356M1 (J-3 Range), in 2005, and one exceedance of BEHP, at MW-477M2 (J-1 Range), in 2008.

Figure 7: Herbicides and Pesticides in Groundwater Compared to MCLs/HAs

There has been one exceedance of drinking water criteria for pesticides, at well PPAWSMW-1. A contractor to the United States Air Force installed this monitoring well at the PAVE PAWS radar station in accordance with the Massachusetts Contingency Plan (MCP), in order to evaluate contamination from a fuel spill. The exceedance was for the pesticide dieldrin in a sample collected in December 1999. This well was resampled and after through review it was determined that the original result was a false positive.

There has been one exceedance of drinking water criteria for herbicides, at well MW-41M1 (Impact Area). This response well was installed downgradient of the Impact Area. The exceedance was for the herbicide pentachlorophenol in a sample collected in December 2000. There were no detections above the MCL of this compound in the three previous sampling rounds in 1999, nor in the subsequent sampling rounds in 2000, 2001, 2002, and 2003.

Figure 8: Perchlorate in Groundwater Compared to a 2 ppb Concentration

Changes in detection trends in groundwater samples collected during the 2009 system performance and long term monitoring sampling events at respective study areas are discussed in biweekly data updates (*Summary of Explosives and Perchlorate Results)*.

Sampling and analysis of groundwater for perchlorate was initiated at the end of the year 2000 as part of the IAGWSP. Effective March 2009, Test America is no longer analyzing for perchlorate by method 314. All perchlorate results in long term monitoring groundwater samples are being reported by the more definitive, sensitive method SW846/6850, which has a method detection limit of 0.04 ug/L and a reporting limit of 0.2 ug/l. Therefore, there will be many low level estimated results (< 0.2 ug/L) reported for perchlorate in some LTM samples.

Cumulative exceedances of the 2 ppb concentration of perchlorate have been indicated during past investigations in the following study areas:

- Demo Area 1 (wells 19, 31, 32, 33, 34, 35, 36, 73, 75, 76, 77, 78, 114, 129, 139, 162, 165, 172, 210, 211, 225, 255, 258 and 341);
- Impact Area and CS-19 (wells 58MW0009C, 58MW0015; and wells 38, 89, 91, 93, 101, and OW-1);
- Southeast Ranges (J-1 South, J-2 North, J-2 East, J-3 and L): (wells 93, 125, 127, 128, 130, 132, 142, 143, 158, 163, 166, 193, 197, 198, 215, 232, 234, 237, 243, 247, 250, 263, 265, 286, 289, 293, 295, 300, 302, 303, 305, 307, 310, 313, 319, 321, 324, 326, 329, 335, 339, 343, 346, 348, 366, 368, 370, 393, and wells 90PZ0211, 90MW0022 and 90MW0054, 90WT0013, J2EW3-MW-2-B, and RS003P);
- Northwest Corner of Base Boundary (wells 4036009DC, 66, 270, 277, 278, 279, 283, 284, 287, 297, 301, 309, 323, and RSN0W3); and
- Western Boundary (wells 80, 233, and 267).

Demo Area 1 has a single well-defined source area and extent of contamination. As noted in Section 1 above; ETR systems at Frank Perkins Road and Pew Road in the Demo 1 study area include extraction wells, ex-situ treatment processes to remove explosives and perchlorate from the groundwater, and injection wells to return treated water to the aquifer. System performance monitoring is performed at the Demo1 study area to assess the effectiveness of the treatment systems.

The Impact Area has had eight locations with exceedances of the 2 ppb concentration of perchlorate. The perchlorate plume extends from near the center of the Impact Area to the northwest, in the vicinity of Burgoyne Road. Groundwater wells within the CIA study area continue to be monitored under the LTM program.

The Southeast Ranges have several groundwater plumes defined by concentrations of perchlorate above the HA of 2 ppb. As noted in Section 1 above, ETR systems are in place at J-2 North, J-2 East and J-3 Ranges to treat contaminated groundwater to control further migration of perchlorate. System performance monitoring is performed at these study areas to assess the effectiveness of the treatment systems. Groundwater wells within the J-1 North and L Range study areas are monitored under the LTM program.

The Northwest Corner has a perchlorate plume extending from Canal View Road at the base boundary to the Cape Cod Canal. Groundwater wells within the Northwest Corner study area continue to be monitored under the LTM program.

The Western Boundary has had three locations (MW-80M1, MW-233M3, and MW-267M1) which have exceeded the 2 ppb perchlorate MMCL in one or more sampling rounds. Only MW-233M3 has perchlorate detected above the 2ppb MMCL in the most recent sampling round (3/28/08). The perchlorate results for other Western Boundary wells are all below the MMCL. Groundwater wells within the Western Boundary study area continue to be monitored under the LTM program.

4. DELIVERABLES SUBMITTED

Deliverables submitted during the reporting period include the following:

Monthly Progress Report No. 150 September 2009	10/10/2009
Former A Range Groundwater Investigation and Monitoring Well Installation Project Note	10/29/2009
Draft On-site Soil Treatment Activities Project Note	10/29/2009
Final J-1 Range North and J-1 Range South Annual 2008 Environmental Monitoring Report	10/27/2009
Final J-3 Range 2008 Annual Environmental Monitoring Report	10/09/2009
Final L Range Interim 2009 Environmental Monitoring Report	10/08/2009
Draft J-1 Range M9 HE Grenade and 100m Tunnel Barrier/Berm Target Area Investigation	10/02/2009
J-3 Range Barrage Additional Characterization Investigation	10/30/2009

5. SCHEDULED ACTIONS

The combined revised schedule is currently being updated.

The following documents are being prepared or revised during October.

- J-1 Range Remedial Investigation/Feasibility Study Report
- L Range Remedial Investigation/Feasibility Study Report
- Former K Range Remedial Investigation Report

TABLE 2

AOC = Area of Concern
J = Estimated Result

BWTS = Depth Below Water Table Start (feet)
BWTE = Depth Below Water Table End (feet)
DW Limit = Either the MCL or Lowest Health Advisory Limit
