

**MONTHLY PROGRESS REPORT #289
FOR APRIL 2021**

EPA REGION I ADMINISTRATIVE ORDERS SDWA 1-97-1019 and 1-2000-0014

**JOINT BASE CAPE COD (JBCC)
TRAINING RANGE AND IMPACT AREA**

The following summary of progress is for the period from 1 to 30 April 2021.

1. SUMMARY OF REMEDIATION ACTIONS

Remediation Actions (RA) Underway at Camp Edwards as of 30 April 2021:

Demolition Area 1 Comprehensive Groundwater RA

The Demolition Area 1 Comprehensive Groundwater RA consists of the removal and treatment of contaminated groundwater to control further migration of explosives compounds and perchlorate. Extraction, treatment, and recharge (ETR) systems at Frank Perkins Road, Pew Road, Base Boundary, and the Leading Edge include extraction wells, ex-situ treatment processes to remove explosives compounds and perchlorate from the groundwater, and injection wells to return treated water to the aquifer.

The Frank Perkins Road Treatment Facility has been optimized as part of the Environmental and System Performance Monitoring (ESPM) program at Demolition Area 1. The treatment facility continues to operate at a flow rate of 175 gallons per minute (gpm), with over 2.821 billion gallons of water treated and re-injected as of 30 April 2021. No Frank Perkins Road Treatment Facility shutdowns occurred in April.

The Pew Road Mobile Treatment Unit (MTU) was turned off on 08 March 2021 (formally operated at a flow rate of 65 GPM). As of 30 April 2021, with over 672.9 million gallons of water treated and re-injected since the RA.

The Base Boundary MTU continues to operate at a flow rate of 65 gpm. As of 30 April 2021, over 296.6 million gallons of water was treated and re-injected. No Base Boundary MTU shutdowns occurred in April.

The Leading Edge system continues to operate at a flow rate of 100 gpm. As of 30 April 2021, over 247.2 million gallons of water was treated and re-injected. No Leading Edge system shutdowns occurred in April.

J-2 Range Groundwater RA

Northern Plant

The J-2 Range Northern Treatment facility consists of removal and treatment of contaminated groundwater to control further migration of explosives compounds and perchlorate. The Extraction, Treatment, and Re-infiltration system includes three extraction wells, ex-situ treatment process to remove explosives compounds and perchlorate from the groundwater, and an infiltration basin to return treated water to the aquifer.

The Northern Treatment Building G continues to operate at a flow rate of 225 gpm. As of 30 April 2021, over 1.356 billion gallons of water have been treated and re-injected. No Northern MTU G shutdowns occurred in April.

The Northern MTUs E and F continue to operate at a flow rate of 250 gpm. As of 30 April 2021, over 1.819 billion gallons of water have been treated and re-injected. No Northern MTU E and A shutdowns occurred in April.

Eastern Plant

The J-2 Range Eastern Treatment facility consists of removal and treatment of groundwater to minimize downgradient migration of explosives compounds and perchlorate. The ETI system includes the following components: three extraction wells in an axial array, an ex-situ treatment process consisting of an ion exchange (IX) resin and granular activated carbon (GAC) media to treat perchlorate and explosives compounds, and three infiltration trenches located along the lateral boundaries of the plume where treated water will enter the vadose zone and infiltrate into the aquifer. The J-2 Range Eastern system is running at a combined total flow rate of 495 gpm.

The MTUs H and I continue to operate at a flow rate of 250 gpm. As of 30 April 2021, over 1.466 billion gallons of water have been treated and re-injected. The following MTU H and I shutdowns occurred in April.

- MTU H turned off at 0745 on 09 April 2021 for maintenance and repairs to the Carbon Filtration System (CFS) due to replace a leaking flange and was restarted at 1000 on 16 April 2021.

MTU J continues to operate at a flow rate of 120 gpm. As of 30 April 2021, over 681.0 million gallons of water have been treated and re-injected. No MTU J shutdowns occurred in April.

MTU K continues to operate at a flow rate of 125 gpm. As of 30 April 2021, over 802.1 million gallons of water have been treated and re-injected. No MTU K shutdowns occurred in April.

J-3 Range Groundwater RA

The J-3 Range Groundwater RA consists of removal and treatment of contaminated groundwater to control further migration of explosives compounds and perchlorate. The ETR system includes four extraction wells, ex-situ treatment process to remove explosives compounds and perchlorate from the groundwater and use of the existing Fuel Spill-12 (FS-12) infiltration gallery to return treated water to the aquifer.

The J-3 system is currently operating at 255 gpm. As of 30 April 2021, over 1.476 billion gallons of water have been treated and re-injected. The following J-3 Range system shutdowns occurred in April:

- Well 90EW0001 was turned off at 0742 01 February 2021 due to low flow. Pump and pipe string were removed 17 February 2021, and blind flange installed. Downhole camera inspection completed on 04 March 2021 and well redevelopment was completed on 17-18 March 2021. A new drop pipe and well pump were installed on 05 and 07 April 2021. The well was restarted at 1045 on 07 April 2021.
- Extraction wells J3EW0032, J3EWIP1, and J3EWIP2 were turned off at 0735 on 05 April 2021 to perform repairs to 90EW0001 and were restarted at 1045 on 07 April 2021.

J-1 Range Groundwater RA

Southern Plant

The J-1 Range Southern Groundwater RA consists of removal and treatment of contaminated groundwater to control further migration of explosives compounds. The ETR system includes two extraction wells, ex-situ treatment process to remove explosives compounds from the groundwater, and an infiltration trench to return treated water to the aquifer.

The Southern MTU continues to operate at a flow rate of 125 gpm. As of 30 April 2021, over 660.2 million gallons of water have been treated and re-injected. No J-1 Range Southern system shutdowns occurred in April.

Northern Plant

The J-1 Range Northern Groundwater RA consists of removal and treatment of contaminated groundwater to control further migration of explosives compounds and perchlorate. The ETR system includes two extraction wells, ex-situ treatment process to remove explosives compounds and perchlorate from the groundwater, and an infiltration trench to return treated water to the aquifer.

The Northern MTU continues to operate at a total system flow rate of 250 gpm. As of 30 April 2021, over 960.4 million gallons of water have been treated and re-injected. No J-1 Range Northern MTU shutdowns occurred in April.

Central Impact Area RA

The Central Impact Area (CIA) Groundwater treatment facility consists of removal and treatment of groundwater to minimize downgradient migration of explosives compounds and perchlorate. The ETR system includes the following components: three extraction wells, an ex-situ treatment process consisting of an ion exchange (IX) resin and granular activated carbon (GAC) media to treat explosives compounds, and three infiltration galleries to return treated water to the aquifer. The CIA systems 1, 2, and 3 continue to run at a combined total flow rate of 750 gpm. As of 30 April 2021, over 2.441 billion gallons of water have been treated and re-injected. The following CIA system shutdowns occurred in April.

- 0830 on 13 April 2021 on CIA System 3 to perform a carbon exchange on GAC Vessels #2 and #5 and restarted 0745 on 15 April 2021.

2. SUMMARY OF ACTIONS TAKEN

Operable Unit (OU) Activity As of 30 April 2021

CIA

- IE-Weston mobilized to site.
- Commence and continue staking Ph IV grids.
- Commence and continue surface clear Ph IV grids.
- Continue routine check of CSS cover.
- CIA System 3 GAC Vessels #2 and #5 carbon media exchange on 14 April 2021.
- Inspect CSS liner.
- SPM program groundwater sampling.

Demolition Area 1

- Drill monitoring wells.

Demolition Area 2

- No activity

J-1 Range

- J1 South SPM program groundwater sampling.
- J1 North SPM program groundwater sampling.
- J1 South MTU bag filters were exchanged on 27 April 2021.

J-2 Range

- J2 East MTU J bag filters were exchanged 27 April 2021.

J-3 Range

- J3 Range MTU bag filters were exchanged on 07 April 2021.

L Range

- No activity.

Small Arms Ranges

No activity.

Northwest Corner

- LTM program groundwater sampling.

Training Areas

- Intrusive investigation in Former E Range Geophysical Investigation grids.
- Dawson mobilized to site.

Other

- Collected process water samples from the Central Impact Area (Systems 1 ,2, and 3), Demolition Area 1, J1 Range Northern, J1 Range Southern, J2 Range Eastern, J2 Range Northern, and J3 Range treatment systems.

JBCC IAGWSP Tech Update Meeting Minutes for 15 April 2021Project and Fieldwork Update

Drilling at the Demolition Area 1 locations will begin on Monday. Data could be available as early as next week. It is likely they will start with the well co-located with MW533-M1 where grain size data will be collected. The broken flange at J-2 East Unit H will be replaced tomorrow. CIA 3 was turned off on Tuesday for a carbon change out that was performed Wednesday without incident. All other treatment systems are up and running as designed. The sampling crews are working in the J-1 Range.

Dawson has returned to the site to finish the Former E Range work, which is about halfway complete. They are setting up offices and placing pin flags and will begin digs next week. They plan to continue uninterrupted until the finish the project, which is anticipated to be in July.

The BEM structure was sampled on April 1st. Data should be available soon. Minor repairs were made to the liner before the structure was refilled and covered.

In the Central Impact Area, Parsons has de-mobbed. They left polygon work and approximately 850 digs. Their last task will be to finalize the 2020 report. USACE is continuing to work out the details of the CDC items, currently they are coordinating with Huntsville. IE-Weston has mobilized to the site and will begin field operations with surface and vegetation clearance and staking grids.

L Range Annual Environmental Monitoring Report Presentation

A presentation was provided on the L Range Annual Environmental Monitoring Report. It was noted that during the reporting period (February 2020 to January 2021), new work included the development of the RDX plume shell. Sampling locations, groundwater monitoring results, and trends were reviewed and discussed. The July 2020 semi-annual event included MW-242M1, MW-595M1/M2, MW-596M1, MW-651M1. RDX was detected in two samples above the risk-based concentration (RBC) of 0.6 μ g/L. The maximum detected concentrations were 1.82 μ g/L (MW-595M1) and 0.68 μ g/L (MW-651M1). RDX concentrations at MW-242M1 located along the base boundary continue to decline and have been below the RBC and reporting limit of 0.2 μ g/L since July 2019. The January 2021 annual event included eight wells. RDX was detected in one above the RBC and the health advisory of 2 μ g/L. The maximum detected concentration: 2.41 μ g/L (2.47 μ g/L – Field Duplicate) was in MW-595M1. The RDX concentrations at the base boundary continued to be below the reporting limit of 0.2 μ g/L. It was noted that wells MW-595M1 and MW-650M1 bounding the plume to the south were either non-detect or near the reporting limit.

The new updated RDX plume shell was discussed. The group was reminded that two plume shell presentations were provided at tech meetings earlier this year to discuss the RDX layer-by-layer delineation and the 3D interpolation results. The updated RDX plume shell was created utilizing data from January 1998 through July 2020. This plume shell utilized an exponential decay curve which continues to reduce measured concentrations to slightly less than 2% of its measured concentration after 20 years of groundwater travel. Previous plume shells used a quadratic equation to fit measured data, and this curve reduced initial measured concentrations by 55% after 4.5 years of groundwater travel. Measured concentrations were then held constant at 45% of its initial measured value, neglecting further dispersion/sorption and decay which

continually acts to reduce plume concentrations. Appendix A of the annual report provides the full documentation of the model plume shell development.

Comparison to Decision Document criteria was discussed. Based on the updated plume shell, RDX is predicted to be below the RBC (0.6 µg/L) by 2031 and below background levels (0.25 µg/L) by 2053. Ninety percent of the RDX mass will have attenuated below 0.25 µg/L by 2040, consistent with the Decision Document. The remaining ten percent (less than 1.4 grams) will take an additional 13 years to attenuate as it migrates through the relatively low hydraulic conductivity materials. The Decision Document predicted that RDX would attenuate below the 2 µg/L health advisory by 2013, the RBC level by 2027 and reporting limits by 2040. The model estimated RDX mass in the L Range plume in greater than 0.6 µg/L as of July 2020 is 0.02 lbs., at the time of the Decision Document (2010), 0.242 lbs. Approximately 10 percent of the mass remains above the RBC.

No modifications are recommended to the chemical monitoring program at this time. EPA and MassDEP comments on the report are pending.

Action Items

The action items were discussed and updated.

JBCC IAGWSP Tech Update Meeting Minutes for 29 April 2021

Project and Fieldwork Update

Drilling at the Demolition Area 1 locations is underway. The rig met refusal at 240' at the first location BH-730 (the well co-located with MW533-M1). Data will be available soon and a screen setting call was scheduled for Tuesday May 4th. The rig has moved to the upgradient location (BH731). They are currently at 121' and they started collecting samples. The target depth for the location is 290'. They should be completed at this location mid-next week and then will move to install screens at the first location. The broken flange at J-2 East Unit H has been fixed. There was no breakthrough in March. The J-2 North infiltration gallery (on the west side of Wood Road) is not accepting enough water. Contractors are planning to run a camera to perform a video inspection. All other treatment systems are up and running as designed. The sampling crews have completed sampling in the CIA with the exception of one residential location which is used seasonally. It will be sampled once the homeowner returns for the summer. They completed the majority of J-1 south and are currently sampling in J-1 north.

Dawson has returned to the site to finish the Former E Range work, which is about halfway complete. They have completed discrete targets, polygons and obstructions in 65 grids to date. Two MEC items have been found since the last tech meeting, 1 37mm projectile and 1 3.5" HEAT rocket. To date, 43 MEC have been found: 27 3.5" rockets, 1 4.2" illumination mortar, 5 60mm mortars, 4 40mm practice grenades, 1 fuze from 60mm, 1 75mm projectile, 3 x 0.3lb supplemental charge, and 1 37mm projectile. In addition, a total of 57 20mm and 3 30mm projectiles need to be vented in the BEM. They plan to continue uninterrupted until they finish the project, which is anticipated to be in July.

In the Central Impact Area, IE-Weston has mobilized to the site on April 19th and began field operations by staking grids. They have completed initial surface sweeps in Survey Units 1 and 2 in advance of vegetation clearance. They are continuing in Survey Unit 3. Today they excavated

5' X 5' X 1' grid under a cracked open item. USACE is continuing to work out the details of getting a contractor in place to destroy the CDC items, currently they are coordinating with Huntsville.

Action Items

The action items were discussed and updated.

JBCC Cleanup Team Meeting

The JBCC Cleanup Team (JBCCCT) meeting was conducted virtually on March 24, 2021. Presentation materials can be found on the IAGWSP web site at <https://bcc-iaqwsp.org/iaqwsp/community/impact/presentations/>. The Cleanup Team meeting discussed late breaking news and responses to action items, as well as updates from the IAGWSP and the Installation Restoration Program (IRP). The JBCCCT meetings provide a forum for community input regarding issues related to both the IRP and the IAGWSP.

3. SUMMARY OF DATA RECEIVED

Table 1 summarizes sampling for all media from 1 to 30 April 2021. Table 2 summarizes the validated detections of explosives compounds and perchlorate for all groundwater results received from 1 to 30 April 2021. These results are compared to the Maximum Contaminant Levels/Health Advisory (MCL/HA) values for respective analytes. Explosives and perchlorate are the primary contaminants of concern (COC) at Camp Edwards. Table 3 summarizes sampling of influent and groundwater samples for per- and polyfluoroalkyl substances (PFAS) from 1 June 2019 to present.

The twelve OUs under investigation and cleanup at Camp Edwards are the Central Impact Area, Demolition Area 1, Demolition Area 2, Former A Range, J-1 Range, J-2 Range, J-3 Range, L Range, Northwest Corner, Small Arms Ranges, Training Area, and Western Boundary. Environmental monitoring reports for each OU are generated each year to evaluate the current year groundwater results. These reports are available on the site Environmental Data Management System (EDMS) and at the project document repositories (IAGWSP office and Jonathan Bourne Library).

4. SUBMITTED DELIVERABLES

Deliverables submitted during the reporting period include the following:

• Monthly Progress Report No. 288 for March 2021	12 April 2021
• Agency Draft L Range 2021 Environmental Monitoring Report	09 April 2021
• J3 Range 2020 Draft EMR RCL	09 April 2021
• Small Arms Ranges Draft Soil Removal Project Summary Report RCL Project Note	30 April 2021
• Small Arms Ranges Revised Soil Removal Activities CWR	30 April 2021
• Appendix A-C, Small Arms Ranges Revised Soil Removal Activities CWR	30 April 2021

5. SCHEDULED ACTIONS

The following actions and/or documents were being prepared or revised in April 2021 and will be in progress in May 2021.

- J-2 2020 Annual Environmental Monitoring Report MOR on RCL
- J-3 2020 Annual Environmental Monitoring Report, agency feedback/approval on RCL
- L-Range Draft Annual Environmental Monitoring Report
- Central Impact Area Source Removal Draft Annual Report RCL to MassDEP Comments
- J-3 Range PFAS Project Note
- Central impact Area continue staking, surface clearing, and vegetation clearing for Ph IV grids.
- Demolition Area 1 monitoring well drilling.
- IRA Status and Completion Report
- Small Arms Ranges Revised Completion of Work Report and response to comments
- J-2 Range, Phase-2, Addendum to Post-DD Confirmation Geophysical and Soil Investigation Findings Project Note
- J-3 Range Post-DD Confirmation Geophysical and Soil Investigation Findings Revised Final Project Note

- Central Impact Area Draft 2020 Source Removal Annual Report
- Northwest Corner Demonstration of Compliance Draft Report MOR to RCL
- Agency Comments on the CIA Source Area QAPP

TABLE 1
Sampling Progress: 1 to 30 April 2021

Area Of Concern	Location	Field Sample ID	Sample Type	Date Sampled	Matrix	Top of Screen (ft bgs)	Bottom of Screen (ft bgs)

PFAS Summary Report – Groundwater Joint Base Cape Cod, IAGWSP

Notes:

ng/L = nanograms per liter; ug/kg = micrograms per kilogram; U = not detected; J = estimated; UJ = estimated non detect

The LOQ value will be used to report non-detects when blank contamination occurs

Bolded results indicate detections of PFAS

Bolded and highlighted results indicate detection of PFAS above the EPA Lifetime Health Advisory: PFOS + PFOA > 70 ng/L.

Bolded and highlighted results indicate detection of PFAS6 above the MassDEP MCL: PFOS + PFOA + PFDA + PFHpA + PFHxS + PFNA > 20 ng/L

† Lifetime Health Advisory, US Environmental Protection Agency, May 2016

‡ PFAS Maximum Contaminant Level (MCL) Final Amendments ("MCL", 310 CMR 22.00 PFAS MCL Amendments), Massachusetts Department of Environmental Protection, October 2, 2020

§ PFAS compounds used in the summation of all analytes are listed in the above table
