**JBCC IAGWSP Tech Update Meeting Minutes for 27 May 2021**Project and Fieldwork Update

Crews completed surface completions for the three well clusters. Well development will begin next week and should take less than four days.

There was breakthrough at CIA-1 and a change out is scheduled for June 2. There was an FS-12-related shutdown at J-3 for ~9 hours, over a 3-day period. The reason was not specified but it is assumed the shutdown was related to a power issue. Other than that, the systems have been running smoothly.

Groundwater sampling is underway at Demo 1 and is expected to last for quite a while. The required Snake Pond samples were collected ahead of the Memorial Day Weekend so that data should be available soon to forward on to Sandwich Board of Health.

Additional surface well maintenance is planned to fix the USGS well so that it drains away from the base; there is concern that the water is infiltrating from the surface. There are also some J-1S road boxes that need to be raised as well.

Dawson continues to do intrusive investigations in the grids at the Former E Range. They are currently investigating target grids at H-14 and I-14. They've completed 11 grids since the last tech meeting on April 29. They've uncovered two 40-millimeter practice grenade since the last meeting. To date, 76 of the 121 grids have been completed with a total of 45 MEC items found: 27 3.5 inch rockets, one 4.2 inch, mortar, five 60mm mortars, six 40mm practice grenades and one fuse from a 60mm mortar. Crews also uncovered total of 61 20mm and 7 30mm practice projectiles that are ND but they need to be destroyed in the BEM so they can be disposed of as MEC properly. Crews are still scheduled to finish in early August with all of the intrusive investigations.

This summer IAGWSP is going to be coordinating additional impact area road work with Jake McCumber, in accordance with any protocols that are in place.

IE-Weston is still on site and has completed the surface and vegetation clearance. The Huntsville team began seeding and QA/QC operations last week. The DGM team and equipment have been mobilized and are setting up to work in SU1 this week. Contractual arrangements are being made with IE-Weston to destroy the items in the CDC magazine.

Small Arms Range Groundwater Monitoring Presentation

A presentation was provided on the Small Arms Ranges (SAR) groundwater monitoring program for the reporting period of March 2019 through March 2020, which included one annual sampling round. Soil excavation and removal were also completed during the 2020 reporting period.

No new wells were installed in the SAR operable unit since the GA/GB wells were installed in 2017. There are 16 wells included in the program and all of those were sampled. There was one detection of tungsten at MW72S at 4.8 ppb. Everything else was ND in metals except for an antimony detection in MW 470S at 0.28 ppb.

EPA asked for clarification about the location of MW-690, which was installed in 2017 in the disturbed area at the old UTES site. EPA asked if the former GB Range had existed to the north of MW-690. USACE noted it was located to the east, in the woods, where E&RC crews are clearing. IAGWSP noted that the purpose of the well was to monitor groundwater in that area where bullets from the GB Range were found and left in place (based on previous agency approval). The GB Range had no berm so it was very large fallout area.

EPA asked if CS-10 was the same location as the former UTES area. IAGWSP commented that CS-10 was the former BOMARC missile site and subsequent to the BOMARC abandonment, the UTES facility was moved into one of the existing buildings. Contractors have since constructed a new UTES facility to the west, where the former missile silos were located, but the Guard has not been able to occupy that building yet. Operations are still run out of the former BOMARC building.

EPA asked about the locations of timberline tunnels that were part of the range and indicated that they might request PFAS sampling of those wells either under IAGWSP or AFCEC.

Dave Hill continued the SAR presentation and said that metals have been below cleanup level or non-detect since 2010. The DD has no timeline for remedy completion for the SAR. Camp Edwards is managing LUC infrastructure and has to approve all subsurface digging. Dig safe is another added layer of protection for monitoring wells and other environmental sampling equipment. Camp Edwards' range control has also implemented range safety measures and ensures training activities are not conducted outside of approved dig sites without authorization. Going forward, LUCs will be maintained and there will be a third round of post-soil removal sampling data for current monitoring network. MassDEP asked about the status of the SAR groundwater monitoring report. IAGWSP replied that the report is currently being routed at USACE or signatures.

### Action Items

The action items were discussed and updated.

### **JBCC Cleanup Team Meeting**

The JBCC Cleanup Team (JBCCCT) meeting was conducted virtually on March 24, 2021. Presentation materials can be found on the IAGWSP web site at <https://bcc-iagwsp.org/iagwsp/community/impact/presentations/>. The Cleanup Team meeting discussed late breaking news and responses to action items, as well as updates from the IAGWSP and the Installation Restoration Program (IRP). The JBCCCT meetings provide a forum for community input regarding issues related to both the IRP and the IAGWSP.

### 3. SUMMARY OF DATA RECEIVED

Table 1 summarizes sampling for all media from 1 to 31 May 2021. Table 2 summarizes the validated detections of explosives compounds and perchlorate for all groundwater results received from 1 to 31 May 2021. These results are compared to the Maximum Contaminant Levels/Health Advisory (MCL/HA) values for respective analytes. Explosives and perchlorate are the primary contaminants of concern (COC) at Camp Edwards. Table 3 summarizes sampling of influent and groundwater samples for per- and polyfluoroalkyl substances (PFAS) from 1 June 2019 to present.

The twelve OUs under investigation and cleanup at Camp Edwards are the Central Impact Area, Demolition Area 1, Demolition Area 2, Former A Range, J-1 Range, J-2 Range, J-3 Range, L Range, Northwest Corner, Small Arms Ranges, Training Area, and Western Boundary. Environmental monitoring reports for each OU are generated each year to evaluate the current year groundwater results. These reports are available on the site Environmental Data Management System (EDMS) and at the project document repositories (IAGWSP office and Jonathan Bourne Library).

## **PFAS Summary Report – Groundwater**

### **Joint Base Cape Cod, IAGWSP**

#### **Notes:**

ng/L = nanograms per liter; ug/kg = micrograms per kilogram; U = not detected; J = estimated; UJ = estimated non detect

The LOQ value will be used to report non-detects when blank contamination occurs

**Bolded results indicate detections of PFAS**

**Bolded and highlighted results indicate detection of PFAS above the EPA Lifetime Health Advisory: PFOS + PFOA > 70 ng/L.**

**Bolded and highlighted results indicate detection of PFAS6 above the MassDEP MCL: PFOS + PFOA + PFDA + PFHpA + PFHxS + PFNA > 20 ng/L**
