JBCC Impact Area Groundwater Study Program (IAGWSP) Tech Update Meeting Minutes for 13 January 2022

Project and Fieldwork Update

There were two breakthroughs in November at CIA 2 and J-1 North. The CIA 2 carbon was changed yesterday (12 January 2022), and the J-1 North carbon will be changed out today (13 January 2022). CIA 2 will be brought back online today; J-1 North, tomorrow (14 January 2022). All other systems are up and running. The LTM crews are sampling the Upper Cape Water Supply Cooperative sentry wells today. All the other PFAS sampling has been completed with data pending. Now that the PFAS sampling is completed, crews will resume sampling in Demolition Area 1 (originally scheduled for December) and will make up schedule by working Fridays.

The roads are finished, and the only item pending is disposal of the 50 cubic yards of soil currently staged at H Range. USACE has been checking on the pile weekly to ensure it stays covered.

Weston has four teams in the CIA. All cued surveys are complete and intrusive is ongoing; they are primarily working Survey Units (SU) 2, 3, and 5. Survey Unit 1 is complete; SU2 is approximately 70% complete; SU3-1 (priority) is 55%; and SU5 is about 95% complete. They are 100% complete in Parsons SU8 and approximately 10% complete in Parsons SU9. USACE is working on a revised project note and responses for the Consolidated Shot Structure (CSS), waiting for the Ordnance and Explosives (OE) staff from Huntsville to provide input.

Central Impact Area 100% Verification Grid Presentation

A presentation was provided on the results of the CIA Phase IV 100% dig validation. A figure showing the validation grids (38_37 and 44_27) was displayed and discussed. The group was reminded of the goals set in the Decision Document: (1) remove 75-95% of UXO while maximizing removal of net explosive weight and (2) correctly classify 95% of the targets of interest (TOI) while reducing clutter digs by greater than 70%.

A figure showing the Metal Mapper data collected for all EM61 anomalies for the grid 38_37 was displayed. There were 1121 EM61 anomaly locations with Metal Mapper cued data collection. Of those, there were 252 dig locations, and one EM61 target produced two digs. This resulted in a recommended dig rate of 22.47%.

The remaining 870 anomalies were dug for quality assurance (QA). Forty-one TOI (UXO or UXO-like items) were recovered. For the classification results, 870 clutter items were correctly classified with 19.4% of clutter incorrectly classified as “likely-TOI,” thereby meeting the goal of reducing clutter digs by 70%.

A figure showing the Metal Mapper data collected for all EM61 anomalies for grid 44_27 was displayed. There were 796 EM61 anomaly locations identified. Of those, 265 were dig locations. This resulted in a recommended dig rate of 34.5%. The remaining 503 anomalies were dug for QA. Eighty-two TOI (UXO or UXO-like items) were recovered. For the classification results, 503 clutter items were correctly classified with 27% of clutter incorrectly classified as "likely-TOI," thereby meeting the goal of reducing clutter digs by 70%.

In both 38_37 and 44_27, large pieces of frag and/or large quantities of frag were classified as digs in some cases due to limitations of inversion algorithms. 100% of TOI were correctly classified.

The status and path forward were reviewed. The dynamic and cued geophysics are complete for all 2021 Phase V Area 1. Intrusive investigations are complete for SU 1 and 1,927 TOI have been completed. Intrusive investigations are ongoing for SU2, SU3-1, and SU5: SU2 has 1,785 TOI complete with 825 remaining, SU3-1 has 1,709 TOI complete with 1,451 remaining, and SU5 has 1,897 TOI complete with 101 remaining. The SU3-2 and SU4 intrusive work will be complete in 2022. Currently, SU3-2 has 478 TOI complete with 2,433 remaining, and SU4 has 1,772 TOI remaining. In addition, there are 23 blow-in-place (BIP) actions left to be completed, however demolition activities at the consolidated shot structure are currently suspended. Future BIP activity will be rescheduled upon receipt of USACE direction. The sampling, transportation, and disposal of Consolidated Shot Structure (CSS) soil needs to be completed, and the annual report is being prepared for submittal to USACE. In Phase III, all TOI and polygon digs are complete in SU8, while in SU9, all polygon digs and 21 TOI are complete. A status map as of 31 December 2021 was displayed.

Action Items

The action items were discussed and updated.

JBCC IAGWSP Tech Update Meeting Minutes for 27 January 2022

Project and Fieldwork Update

There was one breakthrough in December at CIA 1. The changeout is occurring today (27 January 2022), so the system is off and will be started back up tomorrow (28 January 2022). All other systems are up and running. The LTM crews are finishing up in Demolition Area 1 and will next move to perform the semi-annual sampling rounds for the Small Arms Ranges and Southeast Ranges. The first batch of PFAS data from the J-2 North sampling was received yesterday and will be forwarded out to the team today. In general, the data look good. There was one new detection in a well that hadn't been seen previously. Detections were found in most wells that had prior detections above the MassDEP PFAS6 maximum contaminant level (MCL) of 20 ng/L, however the concentrations were consistently half of what they were during the last sampling round. Eighteen additional well sample results, including the Co-op wells, are still pending. Of note, MW-63, which is a five-screen location next to sentry well C7, was non-detect. MassDEP asked if it was the same suite of contaminants that was seen with the last round of sampling; IAGWSP explained that it is and oftentimes sampling detects contaminants that are not on the PFAS6 list.

The disposal of the 50 cubic yards of soil currently staged at H Range is still pending. USACE has been checking on the piles weekly to ensure it stays covered.

Weston has four teams in the CIA digging, and they expect to be finished by the end of February. All cued surveys are complete and intrusive is ongoing; they are primarily working Survey Units (SU) 2, 3, and 5. Survey Unit 1 is complete, SU2 is approximately 80% complete, SU3-1 (priority) is 65% complete, and SU5 is complete. The Weston teams are 100% complete in Parsons SU8 and approximately 20% complete in Parsons SU9. USACE has sent the revised project note and responses for the Consolidated Shot Structure (CSS), and once the document is approved, demolition operations will be scheduled.

Central Impact Area Plume Shell Update Presentation

A presentation was provided on the Central Impact Area RDX Plume Shell update. It was explained that RDX plume shells for IAGWSP sites are updated every five years. To update the plume shell, the following steps were taken:

1. The JBCC Environmental Data Management System (EDMS) was queried for RDX data in the CIA.
2. An existing steady-state MODFLOW groundwater model was run for “average” conditions.
3. The simulation was started at the earliest date of groundwater sample collection and was ended at the present time with representative groundwater extraction rates used for the simulation period.
4. Particles were initiated in MODPATH at locations and times of each sample collection point and migrated using results of the MODFLOW groundwater flow model.
5. MODPATH simulations were run to migrate particles (x, y, and z) to the present time.
6. The model-predicted x, y, z, and c values were imported to Excel and matched to their respective measured concentrations. It was noted that the RDX concentrations were decayed using the new sensitivity attenuation curve developed for the L Range Plume Shell update. As such, the RDX concentrations are decayed using an exponential function with a maximum decay of 98% after 20 years vs. a maximum decay of 55% after five years using the Jacobs-developed quadratic function.
7. The values were then input into ESRI ArcView software and used as a guide to manually develop the plume into contours representing 10-foot layers.

The plume shell start date was 22 July 1997, and all RDX concentrations ranged from non-detect (ND) to 88 µg/L. The number of points migrated was 9,649 with 806 used for the plume shell contouring. The plume contour values were 0.25 µg/L, 0.60 µg/L, 2 µg/L, and 6 µg/L. The maximum elevation was 65 feet msl and the minimum plume elevation was -155 feet msl. The layer-by-layer depictions were shown and discussed. Graphs illustrating the extraction well predicted vs. measured concentrations and mass removals were displayed and discussed.

The predicted cleanup times were discussed. The group was reminded that the Decision Document listed a cleanup time of 2047 for <2.0 µg/L and 2055 to reach 0.60 µg/L. The model is predicting 2038 for <2.0 µg/L and 2054 to reach 0.60 µg/L. MassDEP asked if an evaluation as to when various extraction wells might be shut off has been done. USACE explained that it hadn't yet. A project note will be provided summarizing the plume shell development.

Action Items

The action items were discussed and updated.

JBCC Cleanup Team Meeting

The next JBCC Cleanup Team (JBCCCT) is scheduled for 13 April 2022 at 6:00 PM (1800 EST) via Microsoft Teams. Additional meeting details will be provided at a later date. Presentation materials from previous meetings can be found on the IAGWSP web site at <http://bcc-iagwsp.org/community/impact/presentations/>. The Cleanup Team meeting discusses late breaking news and responses to action items, as well as updates from the IAGWSP and the Installation Restoration Program (IRP). The JBCCCT meetings provide a forum for community input regarding issues related to both the IRP and the IAGWSP.

3. SUMMARY OF DATA RECEIVED

Notes:

ng/L = nanograms per liter; ug/kg = micrograms per kilogram; U = not detected; J = estimated; UJ = estimated non detect

The LOQ value will be used to report non-detects when blank contamination occurs

Bolded results indicate detections of PFAS

Bolded and highlighted results indicate detection of PFAS above the EPA Lifetime Health Advisory: PFOS + PFOA > 70 ng/L.

Bolded and highlighted results indicate detection of PFAS6 above the MassDEP MCL: PFOS + PFOA + PFDA + PFHpA + PFHxS + PFNA > 20 ng/L
