

**MONTHLY PROGRESS REPORT #308
FOR NOVEMBER 2022**

EPA REGION I ADMINISTRATIVE ORDERS SDWA 1-97-1019 and 1-2000-0014

**JOINT BASE CAPE COD (JBCC)
TRAINING RANGE AND IMPACT AREA**

The following summary of progress is for the period from 01 to 30 November 2022.

1. SUMMARY OF REMEDIATION ACTIONS

Remediation Actions (RA) Underway at Camp Edwards as of 25 November 2022:

Demolition Area 1 Comprehensive Groundwater RA

The Demolition Area 1 Comprehensive Groundwater RA consists of the removal and treatment of contaminated groundwater to control further migration of explosives compounds and perchlorate. Extraction, treatment, and recharge (ETR) systems at Frank Perkins Road, Base Boundary, and the Leading Edge include extraction wells, an ex-situ treatment process to remove explosives compounds and perchlorate from the groundwater, and injection wells to return treated water to the aquifer.

The Frank Perkins Road Treatment Facility has been optimized as part of the Environmental and System Performance Monitoring (ESPM) program at Demolition Area 1. The treatment facility continues to operate at a flow rate of 175 gallons per minute (gpm), with over 2.964 billion gallons of water treated and re-injected as of 25 November 2022. No Frank Perkins Road Treatment Facility shutdowns occurred in November.

The Base Boundary Mobile Treatment Unit (MTU) continues to operate at a flow rate of 65 gpm. As of 25 November 2022, over 350.2 million gallons of water were treated and re-injected. No Base Boundary MTU shutdowns occurred in November.

The Leading Edge system continues to operate at a flow rate of 100 gpm. As of 25 November 2022, over 328.6 million gallons of water were treated and re-injected. The following Leading Edge system shutdowns occurred in November.

- 1005 on 30 November 2022 to replace a leaking camlock fitting and flange on the GAC #2 effluent valve and was restarted at 1047 on 30 November 2022.

The Pew Road MTU was turned off with regulatory approval on 08 March 2021 (formerly operated at a flow rate of 65 GPM). Over 672.9 million gallons of water were treated and re-injected during the RA.

J-2 Range Groundwater RA

Northern Plant

The J-2 Range Northern Treatment facility consists of removal and treatment of contaminated groundwater to control further migration of explosives compounds and perchlorate. The Extraction, Treatment, and Re-infiltration system includes three extraction wells, an ex-situ treatment process to remove explosives compounds and perchlorate from the groundwater, and an infiltration basin to return treated water to the aquifer.

The Northern MTUs E and F continue to operate at a flow rate of 250 gpm. As of 25 November 2022, over 2.023 billion gallons of water have been treated and re-injected. No MTU E and F shutdowns occurred in November.

The Northern Treatment Building G continues to operate at a flow rate of 225 gpm. As of 25 November 2022, over 1.541 billion gallons of water have been treated and re-injected. No Northern MTU G shutdowns occurred in November.

Eastern Plant

The J-2 Range Eastern Treatment facility consists of removal and treatment of groundwater to minimize downgradient migration of explosives compounds and perchlorate. The ETI system includes the following components: three extraction wells in an axial array, an ex-situ treatment process consisting of an ion exchange (IX) resin and granular activated carbon (GAC) media to treat perchlorate and explosives compounds, and three infiltration trenches located along the lateral boundaries of the plume where treated water enters the vadose zone and infiltrates into the aquifer. The J-2 Range Eastern system is running at a combined total flow rate of 495 gpm.

The MTUs H and I continue to operate at a flow rate of 250 gpm. As of 25 November 2022, over 1.663 billion gallons of water have been treated and re-injected. The following MTU H and I shutdowns occurred in November.

- 0700 on 02 November 2022 due to a communication system interruption and reprogramming and was restarted at 0806 on 04 November 2022.

MTU J continues to operate at a flow rate of 120 gpm. As of 25 November 2022, over 776.3 million gallons of water have been treated and re-injected. The following MTU J shutdowns occurred in November.

- 0626 on 01 November 2022 due to a power interruption and was restarted at 1017 on 01 November 2022.

MTU K continues to operate at a flow rate of 125 gpm. As of 25 November 2022, over 899.8 million gallons of water have been treated and re-injected. No MTU K shutdowns occurred in November.

J-3 Range Groundwater RA

The J-3 Range Groundwater RA consists of removal and treatment of contaminated groundwater to control further migration of explosives compounds and perchlorate. The ETR system includes four extraction wells, an ex-situ treatment process to remove explosives compounds and perchlorate from the groundwater and utilizes the existing Fuel Spill-12 (FS-12) infiltration gallery to return treated water to the aquifer.

The J-3 system is currently operating at a flow rate of 255 gpm. As of 25 November 2022, over 1.673 billion gallons of water have been treated and re-injected. The following J-3 Range system shutdowns occurred in November.

- 0858 on 01 November 2022 due to a power interruption and was restarted at 1110 on 01 November 2022.
- 0750 on 07 November 2022 due to a power interruption and was restarted at 0816 on 07 November 2022.

J-1 Range Groundwater RA

Southern Plant

The J-1 Range Southern Groundwater RA consists of removal and treatment of contaminated groundwater to control further migration of explosives compounds. The ETR system includes two extraction wells, an ex-situ treatment process to remove explosives compounds from the groundwater, and an infiltration trench to return treated water to the aquifer.

The Southern MTU continues to operate at a flow rate of 50 gpm since 21 November 2022 (normal flow rate is 125 gpm). As of 25 November 2022, over 748.2 million gallons of water have been treated and re-injected. The following J-1 Range Southern system shutdowns occurred in November.

- 0900 on 01 November 2022 due to a power interruption and was restarted at 1115 on 01 November 2022.
- 0840 on 02 November 2022 to allow for sample collection and was restarted at 0932 on 02 November 2022.
- 1350 on 07 November 2022 to allow the infiltration gallery to dry for a scheduled video inspection that was cancelled and was restarted at 0852 on 09 November 2022.
- 1400 on 09 November 2022 to allow the infiltration gallery to dry to conduct a video inspection and was restarted at 0755 on 14 November 2022.
- 1420 on 16 November 2022 to allow the infiltration gallery to dry to perform water jetting of pipes to clear plant roots and was restarted at 1034 on 17 November 2022.
- 1330 on 17 November 2022 due to ponding observed at the infiltration gallery and was restarted at a reduced flow rate of 75 gpm at 0755 on 18 November 2022.
- 1400 on 18 November 2022 to allow the infiltration gallery to dry and was restarted at a reduced flow rate of 50 gpm at 0750 on 21 November 2022.

Northern Plant

The J-1 Range Northern Groundwater RA consists of removal and treatment of contaminated groundwater to control further migration of explosives compounds and perchlorate. The ETR system includes two extraction wells, an ex-situ treatment process to remove explosives compounds and perchlorate from the groundwater, and an infiltration trench to return treated water to the aquifer.

The Northern MTU continues to operate at a total system flow rate of 250 gpm. As of 25 November 2022, over 1.163 billion gallons of water have been treated and re-injected. No J-1 Range Northern MTU shutdowns occurred in November.

Central Impact Area RA

The Central Impact Area (CIA) Groundwater treatment facility consists of removal and treatment of groundwater to minimize downgradient migration of explosives compounds and perchlorate. The ETR system includes the following components: three extraction wells, an ex-situ treatment process consisting of an ion exchange resin and granular activated carbon media to treat explosives compounds, and three infiltration galleries to return treated water to the aquifer. The CIA systems 1, 2, and 3 continue to run at a combined total flow rate of 750 gpm. As of 25

November 2022, over 3.045 billion gallons of water have been treated and re-injected. The following CIA system shutdowns occurred in November.

- CIA-2 at 1000 on 21 November 2022 to perform a carbon exchange on GAC vessels #3 and #6 and was restarted at 0735 on 23 November 2022.

2. SUMMARY OF ACTIONS TAKEN

Operable Unit (OU) Activity as of 25 November 2022:

CIA

- Groundwater sampling within CIA SPM
- Blow-in-place (BIP) demo operations
- Sifting 5x5x1 soils for offsite disposal
- Intrusive investigations
- Routine processing of Munitions Debris
- Routine visual check of consolidated shot structure (CSS) cover and surface area around perimeter of CSS

Demolition Area 1

- No activity

Demolition Area 2

- No activity

J-1 Range

- Groundwater sampling within J-1 North SPM
- Hydraulic groundwater monitoring within J-1 North SPM
- Groundwater sampling within J-1 South SPM
- Hydraulic groundwater monitoring within J-1 South SPM
- Bag filters exchanged
- Water jet infiltration gallery pipeline to remove root intrusions within J-1 South SPM

J-2 Range

- No activity

J-3 Range

- Bag filters exchanged

L Range

- No activity

Small Arms Ranges

- No activity

Northwest Corner

- No activity

Training Areas

- No activity

Impact Area Roads

- Grading on Canal View Rd
- Grading and gravel installation on Barlow Rd from Jefferson Rd to Gibbs Rd

Other

- Collected process water samples from Central Impact Area, Demolition Area 1, J-1 Range Northern, J-1 Range Southern, J-2 Range Eastern, J-2 Range Northern, and J-3 Range treatment systems

JBCC Impact Area Groundwater Study Program (IAGWSP) Tech Update Meeting Minutes for 10 November 2022Project and Fieldwork Update

IAGWSP provided an update on their responses to EPA's request for information on PFAS. IAGWSP staff are actively working to get another list of munitions to send to the Munitions Items Disposition Action System (MIDAS) database administrator to perform a keyword search. The list will be transmitted to them today (10 November 2022), and IAGWSP anticipates having results back by the deadline of 18 November. EPA asked if there was a response to their request to be provided with access to MIDAS. Mr. Cody explained that he had submitted the request and it was still under consideration. MassDEP noted that if EPA were given access to MIDAS, they would most likely request access as well.

In the Central Impact Area (CIA), Weston continues to operate with four teams: three teams are doing intrusive activities and one is performing demolition operations. They are currently working in Survey Unit (SU) 6, which is where they will wrap up this field season. There will likely be approximately two acres remaining that will carry over into next year. Responses to comments on the Quality Assurance Project Plan (QAPP) and the revised QAPP were distributed to the agencies today. Mr. Hnetinka explained the updates to the QAPP related to demolition operations that are outside of the consolidated shot structure (CSS). The two scenarios include (1) demolition of items in the CIA when demolition at the CSS cannot be safely performed and (2) the procedures to be used to dispose of the 41 "524" series fuze items currently located at the MEC collection point.

Scenario one includes white phosphorus (WP) items. The safety concerns with using the CSS for WP rounds are related to fire hazards due to trees and vegetation around the CSS. It also includes items that have an explosive weight larger than 30 pounds. That has not happened yet, however, the QAPP was updated to account for this potential scenario.

The second scenario pertains to the "524" series fuze items and is a one-time operation. These demolition operations will be conducted in areas where removal action has already been completed (i.e., grids where intrusive operations have already been performed). A demolition location will not be used more than once for a shot. Soil will be removed from the 5ft x5ft x1ft area at the locations where munitions and explosives of concern (MEC) items are demolished outside the CSS but within the CIA. Any shot will not exceed the net explosive weight of a "155," which is approximately 50 pounds. EPA will review the changes and provide feedback. Mr. Pinaud noted there were a couple of terms in the amendment that weren't defined. The first was "MFDH." Mr. Hnetinka explained that acronym refers to the "Maximum Fragmentation Distance Horizontal." Mr. Pinaud noticed the MFDH line extended into the community on figures, which

was concerning. Mr. Hnetinka clarified that this line is based on the largest possible munition that could be discovered (i.e., a worst-case scenario) and would account for an unintentional open-air detonation. It does not pertain to a covered item, which is the procedure used. Mr. Cody reminded the group that the program also has a notification protocol specifically focused on the Town of Sandwich, and if there was ever a munition that would trigger that, there is an additional safeguard in place. Ms. Dolan asked that the team check to ensure that it is still appropriate to use the 500-pound bomb and was that still the largest item considered in the Explosive Safety Submission (ESS). Ms. Dolan also noticed that there appeared to be an inconsistency in the BEM model that appears in the ESS and the QAPP and asked the team to check on that.

The KGS groundwater sampling crew completed the J-1 Range South annual system performance monitoring (SPM) (52 locations), including a hydro event (72 locations) on 08 November 2022. CIA semi-annual SPM sampling (11 locations) began on 09 November and continues. After the CIA is completed, crews will move to perform J-1 Range North Annual SPM sampling (71 locations) and hydro event (84 locations). The November monthly process water samples were collected from all systems from 01 to 09 November 2022; results are pending. Based on the October monthly process water samples, CIA-1 showed breakthrough of RDX (0.26 µg/L) in mid-sample, and carbon changeout has been scheduled for 22 November 2022.

Notable system shutdowns since the last tech meeting include:

- J-3 Range system and J-2 Range East Unit J tripped due to a power interruption on 29 October 2022. Both systems were restarted on 31 October 2022 resulting in a total of 34.5 and 32.5 hours of downtime, respectively.
- J-2 East Units H and I were offline due to a communication problem on 02 November, which was repaired on 04 November resulting in 49 hours of downtime.
- Crews continue to troubleshoot the leaking infiltration gallery at J-1 South. The system was turned off on 07 November to allow the gallery to dry out overnight for a camera inspection; however the inspection was cancelled, and the system was restarted on 09 November resulting in 43 hours of downtime. Camera inspection was rescheduled and completed on 10 November. Small feeder roots were observed in both ends of the perforated PVC infiltration pipe. Flushing out via high pressure water was recommended and is tentatively scheduled for next week.

The improvement of Barlow Road from Jefferson Road to Gibbs Road was completed on 08 November. Grading on Canal View Road is being conducted next week.

Action Items

The action items were discussed and updated.

J-1 Northern Perchlorate and RDX Plume Shell Update Presentation

A presentation was provided on the development of the J-1 Range Northern 2022 Perchlorate and RDX Plume Shells. It was explained that plume shells are updated every five years and the J-1 Range Northern plume shells for both perchlorate and RDX were last updated in 2017.

Figures showing the current 2021 model predicted vs. observed perchlorate plume were displayed. The following steps were taken to update the plume shell:

1. EDMS was queried for perchlorate data in the J-1 Range Northern.

2. The existing MODFLOW groundwater model is run for “average” conditions.
3. The simulation starts at the earliest date of groundwater sample collection (15 November 2000) and ends at end of month after most recent sample (09 December 2021). Stress periods vary according to changes in representative extraction/reinfiltration rates within model domain.
4. The MODFLOW groundwater flow model is run as transient simulation (flow by advection only).
5. The MODPATH simulation is run to forward migrate particles (x, y, and z) to 31 December 2021. MODPATH forward migrates particles (historical samples) using results of the MODFLOW groundwater flow model simulation. Release of particles initiates in MODPATH at locations and times of sample collection (groundwater profiles, monitoring wells). The particle migration represents flow by advection only (no dispersion or retardation).
6. The model predicted x, y, z, and c values are imported to Excel and match the particles with their respective measured concentrations.
7. Active particle x, y, z, and c values are imported to ArcView and use as a guide to manually develop plume contours representing 10-foot layers. Particles that are removed by extraction wells are permanently removed from the aquifer as part of groundwater remediation, not used for contouring.
8. It was noted that most particles are non-detect (ND) The ND distribution informs and constrains drawing of 2D contours around data >ND.

For perchlorate, the start date was 15 November 2000, and concentrations ranged from ND to 87.2 µg/L. The number of points migrated was 2,225 with 142 used for the plume shell contouring. The plume contour values were 0.25 µg/L, 0.60 µg/L, 2 µg/L, 6 µg/L and 20 µg/L. The plume maximum elevation was +10 ft (above) mean sea level (MSL) and the plume minimum elevation was -100 ft (below) MSL. Plan view depiction of the updated plume and layer by layer depictions were displayed and discussed.

Conclusions were displayed and discussed. It was noted that perchlorate plume core > 15 µg/L upgradient of J1NEW0001 (Wood Road) and upgradient of J1NEW0002 is captured by both extraction wells. The perchlorate plume greater than 2 µg/L is predicted to be captured by the existing two extraction wells. There is some perchlorate mass > 2 µg/L, but < 15 µg/L, not captured by J1NEW0001. All migrated > 15 µg/L perchlorate is predicted to be captured by either extraction well. There is a relatively small percentage of migrated particles > 15 µg/L for 21 years of sampling data (1.7% of 2,000 water samples) that remain for contouring. There are no particles > 15 µg/L that escaped capture, indicating the existing two extraction wells are successfully capturing and removing the highest concentration mass of the perchlorate plume. It was noted that the redevelopment of in-plume J1NEW0002 in summer 2022 should optimize capture of the high concentration plume core upgradient of J1NEW0002.

The next steps are to obtain agency concurrence on the 2D layer contours of 10ft elevation ranges and convert the 2D layers of contour data into 3D interpolation for the new plume shell to create a new set of initial concentrations for the perchlorate plume in the contaminant transport model. In addition, contaminant transport simulations will be performed with the new plume shell to update estimated time to cleanup to 2 µg/L. The new plume shells will be applied in the 2022 J-1 Range Northern Annual Report and a technical memorandum describing the updated perchlorate plume shell will be included as an appendix in the 2022 Annual Report.

The same procedure was followed for RDX. The start date was 23 November 1999, and concentrations ranged from ND to 87.2 µg/L. The number of points migrated was 2,225 with 142 used for the plume shell contouring. The plume contour values were 0.25 µg/L, 0.60 µg/L, 2 µg/L, 6 µg/L, and 20 µg/L RDX. The plume maximum elevation was -10 ft MSL and the plume minimum elevation was -100 ft MSL. Plan view depiction of the updated plume and layer by layer depictions were displayed and discussed.

Conclusions were displayed and discussed. It was noted that the RDX plume core >2.0 µg/L (EPA Lifetime Health Advisory) upgradient of J1NEW0002 is captured by the in-plume extraction well and that the RDX plume greater than 0.6 µg/L downgradient of J1NEW0002 is predicted to be captured by leading edge extraction well J1NEW0001. No RDX mass >0.6 µg/L goes uncaptured by J1NEW0001. All migrated RDX > 20 µg/L is predicted to be captured by the in-plume extraction well. There is a relatively small percentage migrated particles > 2 µg/L (44 samples) for 21 years of sampling data (2% of 2,225 water samples) that remain for contouring and no particles > 20 µg/L escaped capture, indicating the existing two extraction wells are successfully capturing and removing the highest concentration mass of the RDX plume. It was suggested that the redevelopment of in-plume J1NEW0002 in summer 2022 should optimize capture of the high concentration plume core upgradient of J1NEW0002.

Next steps are to obtain agency concurrence on the 2D layer contours of 10ft elevation ranges and convert the 2D layers of contour data into 3D interpolation for new plume shell to create new set of initial concentrations for RDX plume in contaminant transport model. In addition, the team will perform contaminant transport simulations with new plume shell to update estimated time to cleanup to 0.6 µg/L. USACE will update the 2022 J-1 Range Northern Annual Report and submit to agencies for review and prepare a technical memorandum that describes the updated RDX plume shell. This updated information will be included as an appendix in the 2022 Annual Report.

JBCC Cleanup Team Meeting

The next JBCC Cleanup Team (JBCCCT) has yet to be scheduled (previous meeting was 07 December 2022). Meeting details and presentation materials from previous meetings can be found on the IAGWSP web site at <http://bcc-iagwsp.org/community/impact/presentations/>. The Cleanup Team meeting discusses late breaking news and responses to action items, as well as updates from the IAGWSP and the Installation Restoration Program (IRP). The JBCCCT meetings provide a forum for community input regarding issues related to both the IRP and the IAGWSP.

3. SUMMARY OF DATA RECEIVED

Table 1 summarizes sampling for all media from 01 to 30 November 2022. Table 2 summarizes the validated detections of explosives compounds and perchlorate for all groundwater results received from 01 to 30 November 2022. These results are compared to the Maximum Contaminant Levels/Health Advisory (MCL/HA) values for respective analytes. Explosives and perchlorate are the primary contaminants of concern (COC) at Camp Edwards. Table 3 summarizes sampling of influent and groundwater samples for per- and polyfluoroalkyl substances (PFAS) from 01 June 2019 to present. Table 3 PFAS results are compared to the new Regional Screening Levels (RSL) published by EPA on 17 May 2022 as well as the EPA Lifetime Health Advisory for PFOS+PFOA and the MassDEP MCL for PFAS6.

The operable units (OUs) under investigation and cleanup at Camp Edwards are the Central Impact Area, Demolition Area 1, Demolition Area 2, J-1 Range, J-2 Range, J-3 Range, L Range, Northwest Corner, Small Arms Ranges, and Training Areas. Environmental monitoring reports for each OU are generated each year to evaluate the current year groundwater results. These reports are available on the site Environmental Data Management System (EDMS) and at the project document repositories (IAGWSP office and Jonathan Bourne Library).

4. SUBMITTED DELIVERABLES

Deliverables submitted during the reporting period include the following:

- | | |
|--|------------------|
| • Monthly Progress Report No. 307 for October 2022 | 10 November 2022 |
| • EPA Region 1 Administrative Order RCRA 1-2001-0014 Response Letter | 03 November 2022 |
| • Draft Final J-2 Range Northern PFAS Work Plan Response to Comments Letter | 06 November 2022 |
| • Final Demolition Area 2 2022 Environmental Monitoring Report | 16 November 2022 |
| • Draft Final J-3 Range PFAS Work Plan Response to Comments Letter | 16 November 2022 |
| • Draft Former E Range Phase-2 Post-DD Confirmatory Geophysical and Soil Investigation Findings Technical Memorandum Response to Comments Letter | 29 November 2022 |
| • Final Former E Range Phase-2 Post-DD Confirmatory Geophysical and Soil Investigation Findings Technical Memorandum | 29 November 2022 |

5. SCHEDULED ACTIONS

The following actions and/or documents are being prepared in November 2022.

- Small Arms Ranges Annual Environmental Monitoring Report Work Plan Addendum
- Final Central Impact Area Source 2022 Quality Assurance Project Plan Update
- Quality Assurance Project Plan Draft Addendum No. 2
- Final J-3 Range PFAS Evaluation Work Plan
- Final J-2 Range Northern PFAS Evaluation Work Plan
- Memorandum of Resolution for the J-3 Range 2021 Environmental Monitoring Report
- Draft Demolition Area 1 2022 Environmental Monitoring Report
- Draft Central Impact Area 2022 Environmental Monitoring Report
- Memorandum of Resolution for the Northwest Corner Demonstration of Compliance Report (*on hold pending resolution of PFAS issues*)
- Draft KD Range Completion of Work Report
- Draft Five Year Review Report

TABLE 1
Sampling Progress: 1 to 30 November 2022

Area Of Concern	Location	Field Sample ID	Sample Type	Date Sampled	Matrix	Top of Screen (ft bgs)	Bottom of Screen (ft bgs)
J1 Range Northern	MW-253M1	MW-253M1_F22	N	11-22-2022	Ground Water	265.4	275.4

Notes:

na/L = nanograms per liter; ua/ka = micrograms per kilogram; U = not detected; J = estimated; UJ = estimated non detect

Non detects are calculated as zero in the summations.

Bolded results indicate detections of PFAS

Bolded and highlighted results indicate detection of PFAS above the EPA Lifetime Health Advisory: PFOS + PFOA > 70 ng/L.

Bolded and highlighted results indicate detection of PFAS6 above the MassDEP MCL: PFOS + PFOA + PFDA + PFHpA + PFHxS + PFNA > 20 ng/L

Bolded and highlighted results indicate detection of PFAS above the 2022 May EPA Tapwater (THQ 0.1)

† Lifetime Health Advisory, US Environmental Protection Agency, May 2016

The PFOS and PFOA summation includes all detections at and above the DL.

‡ PFAS Maximum Contaminant Level (MCL) Final Amendments ("MCL", 310 CMR 22.00 PFAS MCL Amendments), Massachusetts Department of Environmental Protection, October 2, 2020

The MassDEP PFAS summation includes all quantifiable results reported at and above the LOQ.

§ Sum of All Compounds Detected includes all detections at and above the DL.

PFAS Summary Report – Groundwater
Joint Base Cape Cod, IAGWSP

	Location	J3-INF	J3-INF
	Field Sample ID	J3-INF_3Q22	J3-INF_4Q22
	Sampling Depth	0.00 - 0.00	0.00 - 0.00
	Sampling Date	07/11/2022	10/11/2022
	SDG	320899771	320931731
	Sample Type	Normal	Normal
PFAS 21 Cmps	Screening Limit	Results (ng/L)	Results (ng/L)
§Sum of All Compounds Detected		1.10	1.10
